About this publication

This publication lists the messages and codes that are returned by the IBM® Content Manager OnDemand (OnDemand) server programs.

Who should use this publication

This publication is of primary interest to OnDemand administrators that require more detailed information about returned messages.

How this publication is organized

This publication lists the messages that are returned by the OnDemand server programs.

- **Part 1, “Server messages”, on page 1** lists the messages that are returned by the OnDemand server programs.
- **Part 2, “OAM support services ABEND codes”, on page 135** lists the ABEND codes and reason codes that are returned by the OAM component of OnDemand for z/OS™ and OS/390®, Version 7.1.
- **Part 3, “JES Spool data capture facility ABEND codes”, on page 145** contains ABEND codes, reason codes and messages for the ARSYSPIN program.
- **Part 4, “ACIF messages”, on page 157** lists the messages that are returned by ACIF.

Conventions

The format for date and time, and the characters used as separators for date and time, are intended for a system configured to use the United States national language format. These may be different on your display, depending on the national language format used by your system.

Where to find more information

Product documentation is available on the Web. Click Library from the product Web site at http://www.ibm.com/software/data/ondemand/

Where to get support

Product support is available on the Web. Click Support from the product Web site at http://www.ibm.com/software/data/ondemand/

How to send your comments

Your feedback helps IBM to provide quality information. Please send any comments that you have about this publication or other OnDemand documentation. You can use either of the following methods to provide comments:

- Send your comments from the Web. Visit the IBM Data Management Online Reader’s Comment Form (RCF) page at: http://www.ibm.com/software/data/rcf
- Send your comments by e-mail to:
Be sure to include the name of the product, the version number of the product, and the name of the book. If you are commenting on specific text, please include the location of the text (for example, a chapter and section title, a table number, a page number, or a help topic title).
Summary of changes

This publication contains additions and changes to information previously presented in IBM Content Manager OnDemand: Messages and Codes, SC27-1379-01. The technical additions and changes are marked with a revision bar (†) in the left margin.

The following information is new:

- Added messages 218, 219, 1017, 1019, 1020, 1021, 1022, 1023, 1024, 1025, 1026, 2210, 2211, 4804, 4805, 4806, 5001, 5002, 5004, 5005, 5006, 5007, 5008, 5009, 5010, 5011, 5012, 5013, 5014, 5015, 5016, 5017, 5018, 5019, 5020, 5021, 5022, 5023, 5024, 6107 and 6108 to the server message reference.
- Updated message 4300 in the server message reference.
- Added a new section JES Spool data capture facility ABEND codes, with ABEND codes, reason codes and messages for the ARSYSPIN program.
- Updated messages 440 and 441 in the ACIF message reference.
Part 1. Server messages
Chapter 1. Introduction to messages

You can use the information contained in this publication to identify OnDemand server errors or problems and resolve them by using the appropriate recovery action.

Other message sources

Some server components return messages that are not described in this publication. Some of the message may include:

- Operating System. It is assumed that you are familiar with the functions of the operating system where the OnDemand server software is installed. You should use your operating system information to identify an error or problem and resolve the problem by using the appropriate recovery action.

- Database Manager. It is also assumed that you are familiar with the functions of the database management product that you are using with OnDemand. You should use your database manager information to identify an error or problem and resolve the problem by using the appropriate recovery action.

- Archive Storage Manager. If you use an archive storage manager with OnDemand, then it is assumed that you are familiar with the functions of the archive storage manager. You should use your archive storage manager information to identify an error or problem and resolve the problem by using the appropriate recovery action.

- Server Print Manager. If you use the OnDemand server print function, then it is assumed that you are familiar with the functions of the server print manager product that you are using with OnDemand. You should use your server print manager information to identify an error or problem and resolve the problem by using the appropriate recovery action.

In most cases, these messages provide sufficient information to determine the cause of the warning or error. For more information on the product that generated the messages, please refer to the appropriate manual where the product is documented.

When running other programs on the system, you may receive messages other than those mentioned in this reference. For information on these messages, refer to the publications that you received for that program product.

Message identifiers

The OnDemand programs issue the same messages for AIX®, HP-UX, iSeries™, Solaris, Windows®, and z/OS.

The format of the message identifier is ARSnnnnnt, where:

ARS The message prefix for OnDemand messages.

nnnn Represents the message number.
Represents the type of message and indicates the severity of the message. Can be one of the following letters:

A  Alert message is a warning for an administrator to take action to avoid performance and reliability problems.

D  A debug message contains information that an administrator can use to help service and development resolve problems.

E  Error message when an OnDemand server program fails.

I  Informational message that the OnDemand server issues when a program has completed successfully. These messages can assist in providing an audit trail.

W  Warning message that the OnDemand server issues when the results of a program might be in question.

Note: The messages that are written to the OnDemand system log do not contain the ARS prefix and the type suffix. For example, the message that is associated with the failure of a load process would be written as 88 to the system log, while it is listed as ARS0088E in this publication. However, 88 and ARS0088E are one and the same message.

In this publication, the messages and explanations are listed according to the four-digit message numbers (for example, 0088).
Chapter 2. Common server messages

The following is a list of the messages issued by the OnDemand server programs.

Unless otherwise stated, all error codes described here are internal error codes used by IBM service and IBM development. A return code of 0 (zero) means that the OnDemand program completed processing without any errors. Unless otherwise stated in a specific message explanation or response, any other return code means that the OnDemand program failed.

ARS0013E  DB Error: db_text -- SQLSTATE=sqlstate, SQLCODE=sqlcode, File=file, Line=line
Explanation: The database failed.
User Response: See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors and SQL return codes.

ARS0014I  DB Info: text
Explanation: The text information is provided by the database manager.
User Response: See the messages and codes publication of the database manager product that you are using with OnDemand for information.

ARS0015E  Unable to find SMS tablespace filesystems. Either the defined SMS filesystems are full or there are no SMS filesystems defined.
Explanation: No SMS filesystems have been defined or the SMS filesystems are full.
User Response: Verify the configuration of the SMS filesystem. Either define SMS filesystems or extend the existing SMS filesystems. Then restart the server and resubmit the command.

ARS0016E  Unable to allocate enough DMS filesystem space for table. Need(needed_extents), Available(available_extents), Extent(extent_size)
Explanation: There is not enough DMS filesystem space available to complete the command.
User Response: Define more DMS filesystems. Then restart the server and resubmit the command.

ARS0020E  SM Error: text, RC=rc, Reason=reason, File=file, Line=line
Explanation: The storage manager failed.
User Response: See the messages and codes publication of the storage manager product that you are using with OnDemand for information about the SM Error, RC, and Reason.

ARS0022E  Unable to delete the Application Group >appl_group_name<. You must manually delete the TSM filesystem >file_space_name< with TSM utilities
Explanation: The storage manager failed because the application group data could not be deleted from TSM. If the owner of the OnDemand instance is not root, when a user deletes an application group, OnDemand will delete the application group table(s) from the OnDemand database but will not delete the application group data from TSM.
User Response: To delete the application group data from TSM, log on to TSM and use TSM utilities to delete the filespace in TSM that is associated with the application group. The name of the filespace in TSM is specified in message number ARS0022E. See your TSM information for details about logging on to TSM and using TSM utilities to delete data.

ARS0023E  Object >object_name< in Application Group >appl_grp_name< not found in cache, no other storage defined

Explanation: The object no longer exists in the OnDemand cache and no other storage manager was defined to store the data. The data was expired. Depending on how the application group index expiration was configured, the index information will also expire in the future.

User Response: Verify the storage management configuration on the system and verify the storage management settings for the specified application group.

ARS0024E  Object >object_name< in Application Group >appl_grp_name< not found in node >node_name<

Explanation: The object cannot be found in the specified storage node. The data has expired from the storage node.

User Response: Verify the storage management settings for the specified application group.

ARS0025E  Unable to store data because the cache is full

Explanation: The cache storage filesystems are full.

User Response: Add or extend the cache storage filesystems. Then restart the server and resubmit the command.

ARS0026E  Unable to perform action because this server is cache only and does not support the Storage Management Subsystem

Explanation: The system is configured for cache only. However, the storage node definitions are pointing to a storage manager that is not configured.

User Response: Either define and configure the storage manager or change the storage node to be cache only. Then restart the server and resubmit the command.

ARS0027E  Unable to load the TSM dynamic load library

Explanation: The command failed when attempting to load the Tivoli Storage Manager (TSM) dynamic load library.

User Response: Verify that TSM is correctly installed and configured. Restart the server. Then resubmit the command.

ARS0030I  Login: hostname

Explanation: A client successfully logged on to the server. This message is for your information only.

User Response: No action is required.

ARS0031W  Failed login: hostname

Explanation: A client failed when attempting to log on to the server.

User Response: Verify the userid, password, and server and then resubmit the command.

ARS0032I  Logoff

Explanation: A client logged off of the server. This message is for your information only.

User Response: No action is required.
ARS0033I  Logoff Timeout

Explanation: The server forced a client to log off the server because the client did not perform an action on the server within the interval of time that is specified by the Inactivity Time Out value.

User Response: To proceed, log off the server, log back on to the server, and then resubmit the command. A system administrator can increase the Inactivity Time Out value by starting the administrative client, logging on to the server, and then opening the System Parameters dialog box for the server. See the online help for the System Parameters dialog box for more information about the Inactivity Time Out value.

ARS0034I  User Add: Userid(user_name) Id(uid)

Explanation: The specified userid was added to the system. This message is for your information only.

User Response: No action is required.

ARS0035I  User Delete: Userid(user_name) Id(uid)

Explanation: The specified userid was deleted from the system. This message is for your information only.

User Response: No action is required.

ARS0036I  User Update: Userid(user_name) Id(uid)

Explanation: The specified userid was updated. This message is for your information only.

User Response: No action is required.

ARS0037I  User Update with new Password: Userid(user_name) Id(uid)

Explanation: The specified userid’s password was successfully updated. This message is for your information only.

User Response: No action is required.

ARS0038W  User Failed Update with new Password: Userid(user_name) Id(uid)

Explanation: An attempt to update the specified userid’s password failed.

User Response: Verify the userid and the new password and then resubmit the command.

ARS0039I  Group Add: Group(group_name) Id(gid)

Explanation: The specified group was added to the system. This message is for your information only.

User Response: No action is required.

ARS0040I  Group Delete: Group(group_name) Id(gid)

Explanation: The specified group was deleted from the system. This message is for your information only.

User Response: No action is required.

ARS0041I  Group Update: Group(group_name) Id(gid)

Explanation: The specified group was updated. This message is for your information only.

User Response: No action is required.

ARS0042I  User to Group Add: User(user_name) Id(uid), Group(group_name) Id(gid)

Explanation: The specified user was added to the specified group. This message is for your information only.

User Response: No action is required.
ARS0043I User to Group Delete: User(user_name) Id(uid), Group(group_name) Id(gid)
Explanation: The specified user was deleted from the specified group. This message is for your information only.
User Response: No action is required.

ARS0044I Folder Add: Name(folder_name) Fid(fid)
Explanation: The specified folder was added to the system. This message is for your information only.
User Response: No action is required.

ARS0045I Folder Delete: Fid(fid)
Explanation: The specified folder was deleted from the system. This message is for your information only.
User Response: No action is required.

ARS0046I Folder Update: Name(folder_name) Fid(fid)
Explanation: The specified folder was updated. This message is for your information only.
User Response: No action is required.

ARS0047I ApplGroup to Folder Add: Agid(agid) AID(aid) Fid(fid)
Explanation: The specified application group was added to the specified folder. This message is for your information only.
User Response: No action is required.

ARS0048I ApplGroup to Folder Delete: Agid(agid) AID(aid) Fid(fid)
Explanation: The specified application group was deleted from the specified folder. This message is for your information only.
User Response: No action is required.

ARS0049I ApplGroup to Folder Update: Agid(agid) Fid(fid)
Explanation: The specified application group was updated in the specified folder. This message is for your information only.
User Response: No action is required.

ARS0050I Id to Folder Add: Id(id) Fid(fid)
Explanation: Permissions were added to the specified folder for the User or Group with the specified Id. This message is for your information only.
User Response: No action is required.

ARS0051I Id to Folder Delete: Id(id) Fid(fid)
Explanation: Permissions were deleted from the specified folder for the User or Group with the specified Id. This message is for your information only.
User Response: No action is required.
ARS0052I  Id to Folder Update: Id(id) Fid(fid)
Explanation: Permissions were updated in the specified folder for the User or Group with the specified Id. This message is for your information only.
User Response: No action is required.

ARS0053I  ApplGroup Add: Name(appl_grp_name) Agid(agid)
Explanation: The specified application group was added to the system. This message is for your information only.
User Response: No action is required.

ARS0054I  ApplGroup Delete: Name(appl_grp_name) Agid(agid)
Explanation: The specified application group was deleted from the system. This message is for your information only.
User Response: No action is required.

ARS0055I  ApplGroup Update: Name(appl_grp_name) Agid(agid)
Explanation: The specified application group was updated. This message is for your information only.
User Response: No action is required.

ARS0056I  Id to ApplGroup Add: Id(id) Agid(agid)
Explanation: Permissions were added to the specified application group for the User or Group with the specified Id. This message is for your information only.
User Response: No action is required.

ARS0057I  Id to ApplGroup Delete: Id(id) Agid(agid)
Explanation: Permissions were deleted from the specified application group for the User or Group with the specified Id. This message is for your information only.
User Response: No action is required.

ARS0058I  Id to ApplGroup Update: Id(id) Agid(agid)
Explanation: Permissions were updated in the specified application group for the User or Group with the specified Id. This message is for your information only.
User Response: No action is required.

ARS0059I  Appl to ApplGroup Add: Name(appl_name) Aid(aid) Agid(agid)
Explanation: The specified application was added to the specified application group. This message is for your information only.
User Response: No action is required.

ARS0060I  Appl to ApplGroup Delete: Aid(aid) Agid(agid)
Explanation: The specified application was deleted from the specified application group. This message is for your information only.
User Response: No action is required.
ARS0061I  Appl to ApplGroup Update: Name(appl_name) Aid(aid) Agid(agid)
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS0062I  Id to Appl Add: Id(id) Aid(aid) Agid(agid)
Explanation:  Logical views were added to the specified application for the User with the specified Id. This message is for your information only.
User Response:  No action is required.

ARS0063I  Id to Appl Delete: Id(id) Aid(aid) Agid(agid)
Explanation:  Logical views were deleted from the specified application for the user with the specified Id. This message is for your information only.
User Response:  No action is required.

ARS0064I  Id to Appl Update: Id(id) Aid(aid) Agid(agid)
Explanation:  Logical views were updated in the specified application for the user with the specified Id. This message is for your information only.
User Response:  No action is required.

ARS0065I  ApplGroup Query: Name(appl_grp_name) Agid(agid) Sql(sql) SqlR(sql_restrict) TextSearch(text_search_str) AnnColor(ann_color) AnnText(ann_text)
Explanation:  A query was run against the specified application group. This message is for your information only.
User Response:  No action is required.

ARS0066I  ApplGroup DocGet: Name(appl_grp_name) Agid(agid) ApplName(appl_name) Aid(aid) NodeName(node_name) Nid(nid) Server(server) Time(time) Flds(fields)
Explanation:  A document was retrieved from the specified application group. This message is for your information only.
User Response:  No action is required.

ARS0067I  ApplGroup ResGet: Name(appl_grp_name) Agid(agid) NodeName(node_name) Nid(nid) Server(server) Time(time)
Explanation:  A resource was retrieved from the specified application group. This message is for your information only.
User Response:  No action is required.

ARS0068I  Annotation Add: Name(appl_grp_name) Agid(agid)
Explanation:  An annotation to a document was added to the specified application group. This message is for your information only.
User Response:  No action is required.

ARS0069I  Annotation Id Add: Id(id) Name(appl_grp_name) Agid(agid)
Explanation:  An annotation to a document was added to the specified application group for the User or Group with the specified Id. This message is for your information only.
User Response:  No action is required.
ARS0070I  Annotation Delete: Name(appl_grp_name) Agid(agid)

Explanation:  An annotation to a document was deleted from the specified application group. This message is for your information only.

User Response:  No action is required.

ARS0071I  Annotation Id Delete: Id(id) Name(appl_grp_name) Agid(agid)

Explanation:  An annotation to a document was deleted from the specified application group for the User or Group with the specified Id. This message is for your information only.

User Response:  No action is required.

ARS0072I  Named Query Add: Name(named_query) Fid(fid)

Explanation:  The specified named query was added to the system. This message is for your information only.

User Response:  No action is required.

ARS0073I  Id Named Query Add: Id(id) Name(named_query) Fid(fid)

Explanation:  The specified named query was added to the system for the User or Group with the specified Id. This message is for your information only.

User Response:  No action is required.

ARS0074I  Named Query Delete: Name(named_query) Fid(fid)

Explanation:  The specified named query was deleted from the system. This message is for your information only.

User Response:  No action is required.

ARS0075I  Id Named Query Delete: Id(id) Name(named_query) Fid(fid)

Explanation:  The specified named query was deleted from the system for the User or Group with the specified Id. This message is for your information only.

User Response:  No action is required.

ARS0076I  Named Query Update: Name(named_query) Fid(fid)

Explanation:  The specified named query was updated. This message is for your information only.

User Response:  No action is required.

ARS0077I  Id Named Query Update: Id(id) Name(named_query) Fid(fid)

Explanation:  The specified named query was updated for the User or Group with the specified Id. This message is for your information only.

User Response:  No action is required.

ARS0078I  System Update

Explanation:  This message is for your information only.

User Response:  No action is required.
ARS0079I ApplGroup DocDelete: Name(appl_grp_name) Agid(agid) Flds(fields)

Explanation: A document was deleted from the specified application group. This message is for your information only.

User Response: No action is required.

ARS0080I ApplGroup DocUpdate: Name(appl_grp_name) Agid(agid) OrigFlds(original_fields) UpdFlds(updated_fields)

Explanation: A document was updated in the specified application group. This message is for your information only.

User Response: No action is required.

ARS0081I ApplGroup ObjRetrieve: Name(appl_grp_name) Agid(agid) ObjName(object_name) NodeName(node_name) Nid(nid) Server(server) Off(offset) Len(length) Time(time)

Explanation: The specified storage object was retrieved from the specified application group. This message is for your information only.

User Response: No action is required.

ARS0082I ApplGroup ObjStore: Name(appl_grp_name) Agid(agid) NodeName(node_name) Nid(nid) Server(server) ObjName(object_name) Time(time)

Explanation: The specified storage object was stored in the specified application group. This message is for your information only.

User Response: No action is required.

ARS0083I ApplGroup ObjStore Append: Name(appl_grp_name) Agid(agid) NodeName(node_name) Nid(nid) Server(server) ObjName(object_name) CompOff(compress_offset) CompLen(compress_length)

Explanation: The specified storage object was updated. This message is for your information only.

User Response: No action is required.

ARS0084I ApplGroup Unload DB: Name(appl_grp_name) Agid(agid) LoadId(load_id-start_date-stop_date) Rows Deleted(rows_deleted)

Explanation: A report was deleted from the database. The message identifies the LoadId, which represents the report in the system. The message also identifies the application group and the number of rows that were deleted from the database. This message is for your information only.

User Response: No action is required.

ARS0085I ApplGroup Unload SM: Name(appl_grp_name) Agid(agid) NodeName(node_name) Nid(nid) Server(server) LoadId(load_id) Objects Deleted(objects_deleted)

Explanation: A report was deleted by the storage manager. The message identifies the LoadId, which represents the report in the system. The message also identifies the application group, the storage node, and the number of storage objects that were deleted. This message is for your information only.

User Response: No action is required.

ARS0086I ApplGroup Load DB: Name(appl_grp_name) Agid(agid) Rows(rows)

Explanation: A report was loaded into the database. The message identifies the application group and the number of rows that were loaded into the database. This message is for your information only.

User Response: No action is required.
ARS0087I  ApplGroup Load: Name(appl_grp_name) LoadId(load_id) File(file) InputSize(input_size) OutputSize(output_size)

Explanation: A report was loaded into the system. The message identifies the application group, the input file, and the LoadId. This message is for your information only.

User Response: No action is required.

ARS0088E  ApplGroup Failed Load: Name(appl_grp_name) LoadId(load_id) File(file)

Explanation: The load process failed.

User Response: See the other messages that were generated by the ARSLOAD program and see messages in the OnDemand System Log to correct the problem and then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS0089I  CD-ROM Creation Manifest: Volume(volume)

Explanation: This message is for your information only.

User Response: No action is required.

ARS0090I  BulkProcess: Time(time)

Explanation: This message is for your information only.

User Response: No action is required.

ARS0091I  BulkPrint: Time(time)

Explanation: This message is for your information only.

User Response: No action is required.

ARS0092I  StorageNode Add: Name(node_name) Server(server) Nid(nid) Sid(sid)

Explanation: The specified storage node was added to the system. This message is for your information only.

User Response: No action is required.

ARS0093I  StorageNode Delete: Name(node_name) Server(server) Nid(nid) Sid(sid)

Explanation: The specified storage node was deleted from the system. This message is for your information only.

User Response: No action is required.

ARS0094I  StorageNode Update: Name(node_name) Server(server) Nid(nid) Sid(sid)

Explanation: The specified storage node was updated. This message is for your information only.

User Response: No action is required.

ARS0095I  StorageSet Add: Name(set_name) Sid(sid)

Explanation: The specified storage set was added to the system. This message is for your information only.

User Response: No action is required.

ARS0096I  StorageSet Delete: Name(set_name) Sid(sid)

Explanation: The specified storage set was deleted from the system. This message is for your information only.

User Response: No action is required.
ARS0097I  StorageSet Update: Name(set_name) SId(sid)
Explanation: The specified storage set was updated. This message is for your information only.
User Response: No action is required.

ARS0100I  Printer Add: Name(printer_name) Queue(queue) PId(pid)
Explanation: The specified server printed was added to the system. This message is for your information only.
User Response: No action is required.

ARS0101I  Printer Delete: Name(printer_name) Queue(queue) PId(pid)
Explanation: The specified server printer was deleted from the system. This message is for your information only.
User Response: No action is required.

ARS0102I  Printer Update: Name(printer_name) Queue(queue) PId(pid)
Explanation: The specified server printer was updated. This message is for your information only.
User Response: No action is required.

ARS0103I  ApplGroup DocAdd: Name(appl_grp_name) AgId(agid) FIdS(fields)
Explanation: A document was added to the specified application group. This message is for your information only.
User Response: No action is required.

ARS0104E  popen failed for command >command<. errno=errno
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0105E  pclose failed for command >command<. errno=errno
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0106E  Unlink failed for file >file<. errno=errno
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0107E  Unknown file or directory in cache >path_name<
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0108E  Unable to validate library server
Explanation: The library and object servers are attempting to validate that they belong to the same OnDemand instance.
User Response: Verify that the OnDemand instance is properly configured. Restart the servers. If the error persists, contact your IBM Service Representative.
ARS0109I  Cache Expiration: Internal Date\((\text{internal\_date})\) MinPct\((\text{minimum\_percentage})\) MaxPct\((\text{maximum\_percentage})\) Server\((\text{server})\)

Explanation: The ARSMAINT program writes this message to the system log each time that it starts to expire data from cache storage. This message is for your information only.

User Response: No action is required.

ARS0110I  Cache Migration: Internal Date\((\text{internal\_date})\) Server\((\text{server})\)

Explanation: The ARSMAINT program writes this message to the system log each time that it starts to migrate data to archive storage. This message is for your information only.

User Response: No action is required.

ARS0111E  Unable to determine the link for the file \textgreater \textit{file\_name} \textless. errno=errno

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS0112E  Unable to change permissions on the file \textgreater \textit{file\_name} \textless. errno=errno

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS0113E  Cache Migration Failed: ApplGroup\((\text{appl\_grp\_name})\) Agid\((\text{agid})\) ObjName\((\text{object\_name})\) Date\((\text{date})\) Server\((\text{server})\)

Explanation: The ARSMAINT program failed when attempting to migrate data to archive storage.

User Response: See the OnDemand System Log for other messages that are associated with the migration. If the problem persists, contact your IBM Service Representative.

ARS0114E  Unable to open file \textgreater \textit{file\_name} \textless. errno=errno

Explanation: The command failed when attempting to open the specified file.

User Response: Verify that the file exists and that the file permissions are correct. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS0115E  Unable to seek within file \textgreater \textit{file\_name} \textless from \textit{offset} to \textit{length}. errno=errno

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS0116E  Unable to stat file \textgreater \textit{file\_name} \textless. errno=errno

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS0117E  Offset \textit{off} and length \textit{len} is larger than the size of the file \textgreater \textit{file\_name} \textless of size \textit{bytes}

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.
### ARS0118E  Unable to read from file >file_name<. errno=errno

**Explanation:** Unexpected error occurred during the execution of this program.

**User Response:** If the problem persists, contact your IBM Service Representative.

### ARS0119E  Unable to write to file >file_name<. errno=errno

**Explanation:** Unexpected error occurred during the execution of this program.

**User Response:** If the problem persists, contact your IBM Service Representative.

### ARS0120E  Unable to lock the file >file_name<. errno=errno

**Explanation:** Unexpected error occurred during the execution of this program.

**User Response:** If the problem persists, contact your IBM Service Representative.

### ARS0122E  Unable to close the file >file_name<. errno=errno

**Explanation:** Unexpected error occurred during the execution of this program.

**User Response:** If the problem persists, contact your IBM Service Representative.

### ARS0123E  Unable to stat filesystem >filesystem_name<. errno=errno

**Explanation:** Unexpected error occurred during the execution of this program.

**User Response:** Verify that the filesystem exists and verify the filesystem permissions. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

### ARS0124I  Filesystem Stats Name(filesystem_name) Data(percent_full%%) Inodes(inode_percent_full%%)

**Explanation:** The ARSMaint program writes this message to the system log for each filesystem on which it runs statistics. This message is for your information only.

**User Response:** No action is required.

### ARS0125E  Unable to create symbolic link from file >symbolic_name< to >file_name<. errno=errno

**Explanation:** Unexpected error occurred during the execution of this program.

**User Response:** If the problem persists, contact your IBM Service Representative.

### ARS0126I  ApplGroup Document Expire: Name(appl_grp_name) Agid(agid) Cnt(documents_expired)

**Explanation:** The ARSMaint program writes this message to the system log when using the Document expiration method to delete items from an application group. This message is for your information only.

**User Response:** No action is required.

### ARS0127I  ApplGroup Load Expire: Name(appl_grp_name) LoadId(agid-pri_nid-sec_nid-name-start_date-stop_date)

**Explanation:** The ARSMaint program writes this message to the system log when using the Load expiration method to delete items from an application group. This message is for your information only.

**User Response:** No action is required.

### ARS0128I  ApplGroup Segment Expire: Name(appl_grp_name) Agid(agid) Seg(segment_name)

**Explanation:** The ARSMaint program writes this message to the system log when using the Segment expiration method to delete items from an application group. This message is for your information only.

**User Response:** No action is required.
ARS0129A  Filesystem Full Name(filesystem_name) Data(percent_full%%) Inodes(inode_percent_full%%)

Explanation: The cache storage filesystem is approaching full.
User Response: Either extend the existing cache storage filesystem or add new cache storage filesystems. When you make changes to the cache storage filesystem configuration, restart the server.

ARS0130E  No logical place to store object >object_name<

Explanation: The command failed when attempting to store the object because there are no cache storage filesystems defined to the system or the archive storage manager is not properly configured.
User Response: To use cache storage, define and configure OnDemand cache storage filesystems. To use archive storage, install and configure the archive storage manager. Then restart the server and resubmit the command.

ARS0131E  No logical place to retrieve object >object_name<

Explanation: The command failed when attempting to retrieve the object because there are no cache storage filesystems defined to the system or the archive storage manager is not properly configured.
User Response: To use cache storage, define and configure OnDemand cache storage filesystems. To use archive storage, install and configure the archive storage manager. Then restart the server and resubmit the command.

ARS0132I  Printer Options Add: Name(printer_opts_name)

Explanation: This message is for your information only.
User Response: No action is required.

ARS0133I  Id Printer Options Add: Id(id) Name(printer_opts_name)

Explanation: This message is for your information only.
User Response: No action is required.

ARS0134I  Printer Options Delete: Name(printer_opts_name)

Explanation: This message is for your information only.
User Response: No action is required.

ARS0135I  Id Printer Options Delete: Id(id) Name(printer_opts_name)

Explanation: This message is for your information only.
User Response: No action is required.

ARS0136I  Printer Options Update: Name(printer_opts_name)

Explanation: This message is for your information only.
User Response: No action is required.

ARS0137I  Id Printer Options Update: Id(id) Name(printer_opts_name)

Explanation: This message is for your information only.
User Response: No action is required.

Chapter 2. Common server messages

ARS0149E  Unable to initialize server communications. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0150E  Unable to allocate enough memory. File=file, Line=line
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0151E  Unable to initialize server database system parameters. Contact your system administrator.
Explanation: The command failed when attempting to initialize the database.
User Response: Verify that the OnDemand instance and the database are properly configured. Then resubmit the command.

ARS0152E  The command >command< can only be run by the owner of the command
Explanation: The command failed when attempting to run the specified command.
User Response: Log on to the system as the owner of the command and then resubmit the command.

ARS0153E  Unable to change directory to >directory_name<. errno=errno
Explanation: The system failed when attempting to change to the specified directory.
User Response: Verify that the directory exists and verify the directory permissions. Then resubmit the command.

ARS0154E  Unable to establish server communications with network. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0155E  Server is unable to communicate to receive client requests. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0156E  Server is unable to communicate request with SubSrvr
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0157E  SubSrvr is unable to communicate request with Server
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0158E  Server is unable to initialize database connection. rc=rc
Explanation: The server failed when attempting to initialize the database.
User Response: See the OnDemand System Log for other messages that are associated with database initialization. If the problem persists, contact your IBM Service Representative.

ARS0179E  License Server Failed. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0180E  License Server was unable to initialize the license management system. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0181E  License Server failed during termination of the license management system. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0182E  License Server was unable to acquire a license from the license management system. cnt=count, rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0183E  License Server was unable to release a license from the license management system. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0184E  License Server was unable to reactivate a license from the license management system. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0185E  OnDemand license limit has been exceeded, currently current_licenses running only entitled_licenses are entitled. Please contact an IBM Service Representative.
Explanation: The number of concurrent users exceeds the number of entitled licenses for concurrent users.
User Response: Verify the number of client licenses that your organization is authorized to use. Verify the configuration of the client licenses for concurrent users. If the problem persists, contact your IBM Service Representative.

ARS0186I  OnDemand started with a license limit of entitled_licenses
Explanation: The number of configured entitled licenses for concurrent users is displayed when the OnDemand Library Server starts.
User Response: No action is required.

ARS0187I  Unable to establish thread server connection. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS0188I  Unable to create thread. rc=rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.
ARS0189E  Unable to create pipe communications.  errno=errno
Explanation:  Unexpected error occurred during the execution of this program.
User Response:  If the problem persists, contact your IBM Service Representative.

ARS0190E  System command failed >command<.  errno=errno
Explanation:  Unexpected error occurred during the execution of this program.
User Response:  If the problem persists, contact your IBM Service Representative.

ARS0191I  Segment >segment_name< unknown in System Migration
Explanation:  The command failed when attempting to find the specified segment in the OnDemand System Migration application group.
User Response:  Verify the migration parameters, including the name of the segment and the name of the application group. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS0192E  Unable to create file >file_name<.  errno=errno
Explanation:  Unexpected error occurred during the execution of this program.
User Response:  If the problem persists, contact your IBM Service Representative.

ARS0193E  Unable to query System Migration Application Group.  rc=rc
Explanation:  Unexpected error occurred during the execution of this program.
User Response:  If the problem persists, contact your IBM Service Representative.

ARS0194E  Unable to open directory >directory_name<.  errno=errno
Explanation:  Unexpected error occurred during the execution of this program.
User Response:  If the problem persists, contact your IBM Service Representative.

ARS0195E  Unable to close directory >directory_name<.  errno=errno
Explanation:  Unexpected error occurred during the execution of this program.
User Response:  If the problem persists, contact your IBM Service Representative.

ARS0196I  Cache Expiration: ApplGroup(appl_grp_name) Agid(agid) ObjName(object_name) Date(date) Server(server)
Explanation:  The ARSMAINT program expired the specified storage object from the specified application group. This message is for your information only.
User Response:  No action is required.

ARS0197I  Cache Migration: ApplGroup(appl_grp_name) Agid(agid) ObjName(object_name) Date(date) Server(server)
Explanation:  The ARSMAINT program migrated the specified storage object from cache storage to archive storage. This message is for your information only.
User Response:  No action is required.
ARS0198E Invalid ownership and/or permissions on cache file/directory &gt;path_name&lt;

Explanation: The ownership or permissions for the specified cache storage file or directory are not correct.

User Response: Verify the ownership and permissions for the cache storage filesystems and then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS0199E Unexpected empty directory in cache &gt;directory_name&lt;

Explanation: The cache directory is empty.

User Response: Verify the configuration of the cache storage filesystems and then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS0200E CD-ROM Creation Failed: Volume(volume)

Explanation: The command failed when attempting to create the specified CD-ROM.

User Response: See the OnDemand System Log for other messages that are associated with the CD-ROM creation process. If the problem persists, contact your IBM Service Representative.

ARS0201I Concurrent Licenses: Current(current_licenses), Maximum Allowed(entitled_licenses)

Explanation: The server generates this message approximately every 30 minutes to display the number of concurrent users on the system (at the time that the message was generated). This message also displays the maximum number of concurrent users that are allowed on the system.

User Response: No action is required.

ARS0202I Concurrent Licenses: Maximum Achieved(maximum_licenses), Maximum Allowed(entitled_licenses)

Explanation: The server generates this message each time that the number of concurrent users on the system exceeds the last reported maximum number of concurrent users on the system. This message also displays the maximum number of concurrent users that are allowed on the system. The counter for the maximum number of concurrent users is reset to zero each time that the OnDemand library server is restarted.

User Response: No action is required.

ARS0203I ApplGroup Load: Name(appl_grp_name) LoadId(load_id) File(file) InputSize(input_size) OutputSize(output_size)

Explanation: This message is for your information only.

User Response: No action is required.

ARS0204I Printer Add: Name(printer_name) Queue(queue) Pid(pid)

Explanation: This message is for your information only.

User Response: No action is required.

ARS0205I Printer Delete: Name(printer_name) Queue(queue) Pid(pid) IdName(id_name) Id(id)

Explanation: This message is for your information only.

User Response: No action is required.

ARS0206I User Id Add: User(name) Id(id), User(owner_name) Id(owner_id), Perms(permissions)

Explanation: This message is for your information only.

User Response: No action is required.

ARS0217E Application Group(apply_grp_name) Application(apply_name) defines a document with a data type that can not be printed by this server

Explanation: The server print function failed to print a document.

User Response: The server print function could not handle the data type of the document that was selected to be printed. Resubmit the document to the local print function.

ARS0218E Explanation: The software detected an inconsistency in a control block. An attempt was made to take an SDUMP, but one could not be taken, possibly because DAE prevented it.

User Response: The software will attempt to recover. Search the problem reporting data base for a fix for the problem. If no fix exists, please contact the IBM Support Center.

ARS0219E ARSMVSR2 Ssss Uuuu RSN:xxxxxxx

Explanation: An ABEND occurred attempting to verify a user PassTicket. An SDUMP was attempted but one could not be taken.

User Response: The attempt to logon to OnDemand via a PassTicket was rejected. There is probably an error with the information returned by the ARS.PTGN dynamic exit. Attempt to correct the exit.

ARS1000I Usage: arsadmin [load | load_db | unload | store | retrieve | import | res_diff | postprocess_cmd | indexer | psf_options | msgs | compress | decompress | iconv ]

Version: version

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1001I Usage: arsadmin load [options]

Version: version

load Load OnDemand
-a <name> Application Name. (Not needed if 1 app in appl group)
-d <dir> If (-f), then directory to write object files into
   (Default current dir)
-e <res_id>
   If (-r)
   0, Check for duplicates. (Default)
   Otherwise, Load as new resource
   Else
   Resource Id to use. (Defaults to 0, no resource)
-f Create Objects as files. (Default: load while processing)
-g <name> Application Group Name
-h <hostname> OnDemand Hostname
-i <ind_file> Input Index File
-n <pri_nid-sec_nid> Primary/Secondary Node Identifiers
-o <out_file> Output DB File
-p <passwd> OnDemand User Login Password
-r <res_file> Input Resource File
-s <src_file> Input Doc Source File
-u <userid> OnDemand User Login Name
-y <char> Column Delimiter. (Default ‘|’)

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
ARS1002I  Usage: arsadmin load_db [options]

   Version: version
   load_db  Load the database from a file
      -a <name>  Application Name. (Not needed if 1 app in appl group)
      -g <name>  Application Group Name
      -h <hostname>  OnDemand Hostname
      -p <passwd>  OnDemand User Login Password
      -s <db_file>  Input Database File
      -u <userid>  OnDemand User Login Name
      -y <char>  Column Delimiter. (Default '|')
      -L <load_id>  LoadId to use for OnDemand

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1003I  Usage: arsadmin unload [options]

   Version: version
   unload  Unload a LoadId from OnDemand
      -g <name>  Application Group Name
      -h <hostname>  OnDemand Hostname
      -p <passwd>  OnDemand User Login Password
      -u <userid>  OnDemand User Login Name
      -L <load_id>  LoadId to delete from OnDemand
      -Q Continue if unable to find LoadId in System Log

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1004I  Usage: arsadmin store [options]

   Version: version
   store   Load file(s) into OnDemand
      -d <dir>  Directory to find files. (Default current dir)
      -g <name>  Application Group Name
      -h <hostname>  OnDemand Hostname
      -m <loc>  The location to load the data
        The values are additive. (Default: 7)
         1 Cache (If exists)
         2 Primary Node (If exists)
         4 Secondary Node (If exists)
      -n <pri_nid-sec_nid>  Primary/Secondary Node Identifiers
      -p <passwd>  OnDemand User Login Password
      -u <userid>  OnDemand User Login Name
      <file1..n>  List of files

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
ARS1005I  Usage: arsadmin retrieve [options]

Version: version

retrieve File(s) from OnDemand
-b <off> Offset to begin at. (Default 0)
-d <dir> Directory to retrieve files into. (Default current dir)
-g <name> Application Group Name
-h <hostname> OnDemand Hostname
-l <len> Length to end at. (Default object size)
-m <loc> The location to extract the data
1 Cache (If exists)
2 Primary Node (If exists)
4 Secondary Node (If exists)
-n <pri_nid-sec_nid> Primary/Secondary Node Identifiers
-p <passwd> OnDemand User Login Password
-u <userid> OnDemand User Login Name
	<file1..n> Retrieve file(s) from OnDemand

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1006I  Usage: arsadmin import [options]

Version: version

import Import Database Table
-g <name> Application Group Name
-h <hostname> OnDemand Hostname
-p <passwd> OnDemand User Login Password
-u <userid> OnDemand User Login Name
	<table_name> Tablename to reimport

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1007I  Usage: arsadmin res_diff [options]

Version: version

res_diff Resource Comparison
-a <name> Application Name. (Not needed if 1 app in appl group)
-g <name> Application Group Name
-h <hostname> OnDemand Hostname
-n <pri_nid-sec_nid> Primary/Secondary Node Identifiers
-p <passwd> OnDemand User Login Password
-u <userid> OnDemand User Login Name
	<res_file1..n> Resource File(s) to compare to existing resources

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
ARS1008I  Usage: arsadmin postprocess_cmd [options]
  Version: version
  postprocess_cmd Write the Post Process Command on stdout
    -a <name> Application Name. (Not needed if 1 app in appl group)
    -g <name> Application Group Name
    -h <hostname> OnDemand Hostname
    -p <passwd> OnDemand User Login Password
    -u <userid> OnDemand User Login Name

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1009I  Usage: arsadmin indexer [options]
  Version: version
  indexer Write the Indexer and Indexer Parms on stdout
    -a <name> Application Name. (Not needed if 1 app in appl group)
    -g <name> Application Group Name
    -h <hostname> OnDemand Hostname
    -p <passwd> OnDemand User Login Password
    -u <userid> OnDemand User Login Name

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1010I  Usage: arsadmin psf_options [options]
  Version: version
  psf_options Write the PSF Print Options on stdout
    -a <name> Application Name. (Not needed if 1 app in appl group)
    -g <name> Application Group Name
    -h <hostname> OnDemand Hostname
    -p <passwd> OnDemand User Login Password
    -u <userid> OnDemand User Login Name

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1011I  Usage: arsadmin msgs [options]
  Version: version
  msgs Log messages to the server
    -h <hostname> OnDemand Hostname
    -p <passwd> OnDemand User Login Password
    -s <src_file> Input ASCII Text File to store with message
    -u <userid> OnDemand User Login Name
    -M <msg_num> OnDemand Message Number
    [arg1] [arg2] [arg3] [arg4]

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
ARS1012I Usage: arsadmin compress [options]

- b <off> Offset to begin at. (Default 0)
- c <type> Document Compress Type
  'D' Disable compression
  'L' LZW12 Compression
  'N' No Compression
  'O' OD77 Compression (Default)
  'Z' LZW16 Compression
- l <len> Length to end at. (Default file size)
- o <out_file> Output File
- s <src_file> Input File

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1013I Usage: arsadmin decompress [options]

- b <off> Offset to begin at. (Default 0)
- c <type> Document Compress Type
  'D' Disable compression
  'L' LZW12 Compression
  'N' No Compression
  'O' OD77 Compression (Default)
  'Z' LZW16 Compression
- l <len> Length to end at. (Default file size)
- o <out_file> Output File
- s <src_file> Input File

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1014I Usage: arsadmin iconv [options]

- o <out_file> Output File
- s <src_file> Input File
- F <from_codepage> Input File Codepage
- T <to_codepage> Output File Codepage

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1015I Usage: arsadmin logid [options]

- h <hostname> OnDemand Hostname

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
ARS1017E  Storage node >node_name< on object server >obj_server_name< does not exist in storage set >set_name<
Explanation: The storage node cannot be found in the storage set that is used by the application group.
User Response: Resubmit the command with a storage node that exists in the storage set that is used by the application group.

ARS1018E  The CC Type that was returned by the user exit program is not valid
Explanation: The user exit has returned an unknown CC type.
User Response: Change the user exit program to return a valid CC type and resubmit the command.

ARS1019E  The RECFM value that was returned by the user exit program is not valid
Explanation: The user exit has returned an unknown RECFM.
User Response: Change the user exit program to return a valid RECFM and resubmit the command.

ARS1020E  The LRECL value of >lrecl< that was returned by the user exit program is not valid
Explanation: The user exit has returned an invalid LRECL value.
User Response: Change the user exit program to return an LRECL value in the range of 1 (one) to 32767 and resubmit the command.

ARS1021E  An application cannot be specified without specifying an application group
Explanation: If the name of an application is specified, the application group must also be specified.
User Response: Resubmit the command with the name of the application group.

ARS1022E  An application group is required when a storage node is specified
Explanation: If a storage node is specified, the application group is necessary to determine whether the storage node is valid.
User Response: Resubmit the command with the name of the application group.

ARS1023E  Userid >userid< does not have permission to update application >appl_name< in application group >applgrp_name<
Explanation: The specified user does not have permission to perform the action.
User Response: Update the user to provide the user with permission to perform the action and then resubmit the command. Otherwise, resubmit the command with a different userid.

ARS1024I  Usage: sm_expire [options]
Version: version
sm_expire Unloads a list of objects
-h <hostname> OnDemand Hostname
-p <passwd> OnDemand User Login Password
-s <src_file> Input file containing the list of objects to be expired
-u <userid> OnDemand User Login Name
Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand Administration Guide.

</table>
ARS1108E User >user_name< does not have permission to perform the specified action

Explanation: The specified user does not have permission to perform the action.

User Response: Update the user to provide the user with permission to perform the action and then resubmit the command. Otherwise, resubmit the command with a different userid.

ARS1109E Unable to allocate enough memory. File=file, Line=line

Explanation: The command failed when attempting to allocate sufficient memory to run the action.

User Response: Determine why memory could not be allocated by looking at the operating system and application task status. If the problem persists, contact your IBM Service Representative.

ARS1110E The application group >appl_grp_name< does not exist or user >user_name< does not have permission to access the application group

Explanation: The specified application group name is not correct or the specified user does not have permission to perform the action.

User Response: Verify the name of the application group. Verify the userid and verify that the userid has permission to perform the action. Then resubmit the command.

ARS1111E The application >appl_name< does not exist within the application group >appl_grp_name<

Explanation: The specified application does not belong to the specified application group.

User Response: Verify the name of the application and the name of the application group. Then resubmit the command.

ARS1112E Unable to open the file: file_name

Explanation: The specified file does not exist or the permissions do not allow the file to be opened.

User Response: Verify that the file exists. Verify that the file permissions allow the file to be opened. Then resubmit the command.

ARS1113E Unable to seek to position offset in the file: file_name

Explanation: The command failed when attempting to seek to the correct position within the file.

User Response: Verify the file permissions and then resubmit the command.

ARS1114E Unable to read from offset offset_position for length length_position from the file: file_name

Explanation: The command failed when attempting to read the file.

User Response: Verify and correct the offset and length values for the file and then resubmit the command.

ARS1115E Unable to write the file: file_name

Explanation: The command failed when attempting to write to the file.

User Response: Verify that the location for the file contains sufficient free space to write to the file. Then resubmit the command.

ARS1116E Unable to close the file: file_name

Explanation: The command failed when attempting to close the file.

User Response: Verify that the location for the file contains sufficient free space to close the file. Then resubmit the command.

ARS1136E Unexpected structured field 'structured_field' in the file 'file_name'

Explanation: The AFP data contains an invalid structured field.

User Response: Verify that the AFP data conforms to the AFP specification. Refer to the Mixed Object Document Content Architecture Reference for more information about the correct format of the structured field.

ARS1137E Unable to find the triplet 'triplet' for the structured field 'structured_field' in file 'file_name'

Explanation: The AFP data does not contain a required triplet for the structured field.

User Response: Verify that the AFP data conforms to the AFP specification. Refer to the Mixed Object Document Content Architecture Reference for more information about the correct format of the structured field.

ARS1138W Warning: Unable to find the triplet 'triplet' for the structured field 'structured_field' in the file 'file_name'

Explanation: The AFP data does not contain a required triplet for the structured field, however processing can continue.

User Response: Verify that the AFP data conforms to the AFP specification. Refer to the Mixed Object Document Content Architecture Reference for more information about the correct format of the structured field.

ARS1139E Unable to find the triplet 'triplet' of type 'type' for the structured field 'structured_field' in the file 'file_name'

Explanation: The AFP data does not contain a required triplet type for the structured field.

User Response: Verify that the AFP data conforms to the AFP specification. Refer to the Mixed Object Document Content Architecture Reference for more information about the correct format of the structured field.

ARS1140I Resource 'resource_name' matches the resource 'rid-pri_nid-sec_nid'.

Explanation: A resource that is used by a document already exists on the system. OnDemand will use the resource that exists on the system. This message is for your information only.

User Response: No action is required.

ARS1141I Resource 'resource_name' does not match any existing resources

Explanation: The specified resource does not exist on the system. This message is for your information only.

User Response: No action is required.

ARS1142I Resource 'resource_name' will be added as resource 'rid-pri_nid-sec_nid'. Compression Type('compress_type') Original Size('original_size') Compressed Size('compressed_size')

Explanation: The specified resource was added to the system. This message is for your information only.

User Response: No action is required.

ARS1143I The field name 'field_name' found in the index file does not match any expected fields. The field will be ignored.

Explanation: The specified field was found in the index file. However, the field will not be used because it is not defined in the application group.

User Response: No action is required. However, you should verify that the field is not needed to load or retrieve data.
ARS1144I OnDemand Load Id = >agid-pri_nid-sec_nid-name-start_date-stop_date<
Explanation: This message is for your information only.
User Response: No action is required.

ARS1145E Line line_number: Unable to read next column from input file
Explanation: The command failed when attempting to read the input file.
User Response: Verify that the input file is properly constructed and then resubmit the command.

ARS1146I Loaded rows rows into the database
Explanation: This message is for your information only.
User Response: No action is required.

ARS1147I rows rows written to output file
Explanation: This message is for your information only.
User Response: No action is required.

ARS1148E This application has no indexer defined
Explanation: There is no indexer associated with the OnDemand application.
User Response: Use the administrative client to update the application. Specify an Indexer on the Indexing Information page. Then resubmit the command.

ARS1149E This application has an unknown type of indexer
Explanation: The indexer that is specified for the application is not a valid indexer.
User Response: Use the administrative client to update the application. Specify an Indexer on the Indexing Information page. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS1150E Document offset cannot be determined from value
Explanation: The command failed when attempting to determine the offset of the document.
User Response: Correct the index file. Specify a valid offset. Then resubmit the command.

ARS1151E Document length cannot be determined from value
Explanation: The command failed when attempting to determine the length of the document.
User Response: Correct the index file. Specify a valid length. Then resubmit the command.

ARS1152E Could not find the field name header information
Explanation: The index file does not conform to the OnDemand generic index file format.
User Response: Correct the index file so that it conforms to the OnDemand generic index file format. Then resubmit the command. Refer to the Indexing Reference for information about and examples of the OnDemand generic index file.

ARS1153E Unexpected end of file. Expected expected_fields fields, got only received_fields
Explanation: The index file does not contain enough index fields.
User Response: Correct the index file so that it conforms to the OnDemand generic index file format. Then resubmit the command. Refer to the Indexing Reference for information about and examples of the OnDemand generic index file.

User Response: See the OnDemand System Log for other messages that are associated with the resource. If the problem persists, contact your IBM Service Representative.

ARS1165E  Unable to get existing resource information
Explanation: The command failed when attempting to get existing resource information.
User Response: See the OnDemand System Log for other messages that are associated with the resource. If the problem persists, contact your IBM Service Representative.

ARS1166E  Unable to save load information
Explanation: The command failed when attempting to save load information.
User Response: See the OnDemand System Log for other messages that are associated with the load process. If the problem persists, contact your IBM Service Representative.

ARS1167E  Warning: Resource >resource_name< is empty, no resource will be used for documents
Explanation: The resource file is empty.
User Response: Verify that the data that is being loaded does not require resources.

ARS1168E  Unable to determine Storage Node
Explanation: The command failed to get the storage node information.
User Response: See the OnDemand System Log for other messages that are associated with the load process. If the problem persists, contact your IBM Service Representative.

ARS1169W  The object already exists
Explanation: The object already exists.
User Response: Resubmit the command with the correct parameters.

ARS1170W  The object does not exist
Explanation: The object does not exist.
User Response: Resubmit the command with the correct parameters.

ARS1171E  The client and server are incompatible. Reinstall OnDemand
Explanation: The client software and the server software are not the same version or are not compatible versions.
User Response: Upgrade the client software and / or the server software to the same or a compatible version.

ARS1172E  The operation was unsuccessful because the database is read-only
Explanation: The command failed when attempting to process a read-only instance of OnDemand.
User Response: Verify the instance of OnDemand that you want to process and resubmit the command.
ARS1173E  The server connection has timed out
Explanation: The server forced the command to log off the server because the command did not perform an action on the server within the interval of time that is specified by the Inactivity Time Out value.
User Response: To proceed, log off the server, log back on to the server, and then resubmit the command. A system administrator can increase the Inactivity Time Out value by starting the administrative client, logging on to the server, and then opening the System Parameters dialog box for the server. See the online help for the System Parameters dialog box for more information about the Inactivity Time Out value.

ARS1174E  Internal product logic error. File=file, Line=line
Explanation: The program encountered a logic error.
User Response: Contact your IBM Service Representative.

ARS1175I  Document compression type used - compress_type. Bytes Stored = >bytes_stored<
Explanation: This message is for your information only.
User Response: No action is required.

ARS1176E  Large Object had no pages specified. Make sure data has been properly indexed.
Explanation: To load large object documents into the system, the load process requires page-level indexing information.
User Response: Verify that the indexing parameters are correct and enable the collection of page-level indexing information. Then resubmit the command.

ARS1177E  Field >field_name< was expected but not specified
Explanation: The command expected to find a field, but the field was not specified.
User Response: Verify and correct the indexing parameters. Then resubmit the command.

ARS1178E  Compression failed. rc=rc
Explanation: The command failed when attempting to compress the data.
User Response: Contact your IBM Service Representative.

ARS1179E  ICONV Conversion failed. rc=rc
Explanation: The command failed when attempting to convert the data.
User Response: Contact your IBM Service Representative.

ARS1180E  Unable to remove the file: file_name, errno=errno
Explanation: The command failed when attempting to remove a file.
User Response: Verify that the file exists and verify the file permissions. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS1181E  The specified LoadId is not valid for the Application Group
Explanation: The LoadId is not valid for the application group.
User Response: Resubmit the command with a LoadId that is valid for the application group.
ARS1182E  Unable to convert multibyte character string >string< to wide character string
Explanation:  The command failed when attempting to convert a multibyte character string.
User Response:  Contact your IBM Service Representative.

ARS1183E  Unable to convert wide character string >string< to multibyte character string
Explanation:  The command failed when attempting to convert a multibyte character string.
User Response:  Contact your IBM Service Representative.

ARS1184I  OnDemand UnLoad Successful - LoadId(agid-pri_nid-sec_nid-name-start_date-stop_date) Rows Deleted(rows_deleted)
Explanation:  A report was successfully deleted from the system. This message is for your information only.
User Response:  No action is required.

ARS1185W  Warning: Unable to find LoadId in System Log
Explanation:  The command failed to find the LoadId in the System Log. The requested action cannot proceed.
User Response:  Resubmit the command with a valid LoadId.

ARS1186I  LoadId matches existing LoadId in System Log
Explanation:  The command located the LoadId in the System Log. Processing continues. This message is for your information only.
User Response:  No action is required.

ARS1187W  Warning: LoadId (load_id) partially matches existing LoadId (existing_load_id) in System Log
Explanation:  The command located a LoadId in the System Log that contains some of the elements of the specified LoadId. The requested action cannot proceed.
User Response:  Verify that the LoadId is valid and then resubmit the command.

ARS1188E  Unloading will not continue, specify -Q option to continue
Explanation:  The command failed when attempting to find the LoadId. The unload command will not continue.
User Response:  Resubmit the command with the -Q parameter.

ARS1189W  Unloading will continue, however you may need to resubmit this command with the correct LoadId
Explanation:  The specified LoadId will be deleted. However, because the LoadId does not represent a complete load process, you may need to take additional action to completely remove the report from the system.
User Response:  Resubmit the command with the LoadId that represents the complete load process.

ARS1190E  Unable to determine codepage from codeset rc
Explanation:  OnDemand was not to determine the codepage / codeset.
User Response:  Contact your IBM Service Representative.

ARS1191E  Unable to terminate the iconv conversion rc
Explanation:  The command failed when attempting to terminate the codepage conversion.
User Response:  Contact your IBM Service Representative.
ARS1192I • ARS1199E

ARS1192I  OnDemand Login:
Explanation: The command prompts for a userid that is valid on the instance of OnDemand that is being processed.
User Response: Type a valid userid and then press Enter to continue.

ARS1193I  OnDemand Password:
Explanation: The command prompts for the password of the userid that was specified.
User Response: Type the user’s password and then press Enter to continue.

ARS1194I  OnDemand Application Group:
Explanation: The command prompts for the name of the application group to process.
User Response: Type the name of the application group and then press Enter to continue.

ARS1195I  OnDemand Folder:
Explanation: The command prompts for the name of the folder to process.
User Response: Type the name of the folder and then press Enter to continue.

ARS1196E  Invalid generic index file format: >value<
Explanation: The index file contains incorrect index data.
User Response: Verify that the index file conforms to the OnDemand generic index file format. Then resubmit the command. Refer to the Indexing Reference for information about and examples of the OnDemand generic index file.

ARS1197E  Invalid generic index file format sequence
Explanation: The index file contains incorrect index data.
User Response: Verify that the index file conforms to the OnDemand generic index file format. Then resubmit the command. Refer to the Indexing Reference for information about and examples of the OnDemand generic index file.

ARS1198E  Field >field_name< does not match existing Application alias >alias<
Explanation: The specified field does not match the specified application alias.
User Response: Verify that the alias is defined for the application. Start the administrative client to update the application group. Move to the Field Information page. Select the field from the Field list. Under Mapping, verify and correct the alias information. Then resubmit the command.

ARS1199E  Field >field_name< specified multiple times when only one was expected
Explanation: The specified field appears more than once in the index file.
User Response: Verify that the correct fields are specified in the index file. Then resubmit the command.
ARS1201I Usage: arsmaint [-c [-n <min>] [-x <max>]] [-d] [-e]
[-f <full>] [-g <name>] [-i] [-I <od_inst>] [-m]
[-r] [-R] [-t <internal_date>] [-u <userid>] [-p <passwd>]]
Version: version
- c Expire Cache
- d Expire Database
- e Migrate Database Tables
- f <full> Cache Full - When to send alert message (defaults to 95%)
- g <name> Application Group Name (Defaults to all)
- i Expire Migrated Imported Database Tables
- l <od_inst> OnDemand Instance Name
- m Migrate Cache
- n <min> Min cache threshold percentage (Only for -c, Defaults to 80%)
- p <passwd> OnDemand Passwd (Only for -t)
- r Database Statistics
- R Reload Resources
- s Cache Filesystem statistics
- t <internal_date> Internal Date To Expire/Migrate (Defaults to Today)
- u <userid> OnDemand Userid (Only for -t)
- v Verify/Validate Cache Filesystems
- x <max> Max cache threshold percentage (Only for -c, Defaults to 80%)

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1202E User >user_name< does not have permission to expire data on Application Group >appl_grp_name<

Explanation: The specified user does not have permission to delete data from the specified application group.
User Response: Specify a user that has permission to delete data from the application group or permit the specified user to delete data from the application group. Then resubmit the command.

ARS1301I Usage: arstblsp [-a <action>] [[-g <name>] [-I <od_inst>]
[-t <table>] [-u <userid>] [-p <passwd>]]
Version: version
- a <action> Action to perform
  0 - Copy tables into their own tablespace, must specify -g
  1 - Close a table that is still open for loading, must specify -g
  2 - List the tables that do not have their own tablespace
  3 - List the tables that are still open for loading
- d <dir> Directory for export/import file (UNIX default uses a named pipe)
- g <name> Application Group Name
- l <od_inst> OnDemand Instance Name
- p <passwd> OnDemand Passwd
- t <table> Table Name
- u <userid> OnDemand Userid

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS1302E Application Group >appl_grp_name< is currently not configured for tablespaces

Explanation: The specified application group is not configured to use tablespaces.
User Response: To configure the application group to use tablespaces, update the application group with the administrative client. On the General page, click Advanced. Under Create Tablespace Type, click SMS. Then resubmit the command.
ARS1303I  No Tablespace: ApplGroup(appl_grp_name) Agid(agid) Table(table_name)
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS1304I  Table still open for loading: ApplGroup(appl_grp_name) Agid(agid) Table(table_name)
Explanation:  The specified table is still open for loading. A table that is open for loading cannot be migrated to a table space.
User Response:  Verify the name of the application group and the name of the table. Close the table with the ARSTBLSP program. Then resubmit the command.

ARS1305I  Closed table successfully: ApplGroup(appl_grp_name) Agid(agid) Table(table_name)
Explanation:  The ARSTBLSP program successfully closed the specified table. This message is for your information only.
User Response:  No action is required.

ARS1306E  Unable to close table: ApplGroup(appl_grp_name) Agid(agid) Table(table_name)
Explanation:  The ARSTBLSP program failed when attempting to close the specified table.
User Response:  Verify the name of the application group and the name of the table. See the OnDemand System Log for other messages that are associated with the task. Resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS1307I  Table Empty - Deleted: ApplGroup(appl_grp_name) Agid(agid) Table(table_name)
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS1308E  Unable to delete table: ApplGroup(appl_grp_name) Agid(agid) Table(table_name)
Explanation:  The ARSTBLSP program failed when attempting to delete the specified table.
User Response:  Verify the name of the application group and the name of the table. See the OnDemand System Log for other messages that are associated with the task. Resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS1309I  Successful copy of table: ApplGroup(appl_grp_name) Agid(agid) OldTable(old_table_name) NewTable(new_table_name)
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS1310E  Copy of table failed: ApplGroup(appl_grp_name) Agid(agid) Table(table_name)
Explanation:  The ARSTBLSP program failed when attempting to copy the specified table.
User Response:  See the OnDemand System Log for other messages that are associated with the task. If the problem persists, contact your IBM Service Representative.

ARS1311E  User >user_name< does not have permission to convert tablespace data on Application Group >appl_grp_name<
Explanation:  The specified user does not have permission to convert tablespace data for the application group.
User Response:  Specify a user that does have permission to convert tablespace data for the application group or permit the specified user to have administrator authority for the application group. Then resubmit the command.
ARS2061W  Change Expired Logon Password
Explanation: The server determined that the password for the user has expired.
User Response: Update the user’s password and then resubmit the command.

ARS2063I  Accessing database
Explanation: This message is for your information only.
User Response: No action is required.

ARS2067I  Logon to Server ‘hostname’
Explanation: This message is for your information only.
User Response: No action is required.

ARS2068I  action a Server
Explanation: This message is for your information only.
User Response: No action is required.

ARS2071I  Please Select a Computer
Explanation: This command failed because a computer was not specified.
User Response: Select a computer and then resubmit the command.

ARS2072I  Do you wish to exit without Adding or Updating your last change?
Explanation: The Cancel command was submitted but changes have not been committed.
User Response: Specify whether to exit the command without adding or updating the last change.

ARS2073E  The Port value must be 1-4 digits
Explanation: The port number that was specified is not a valid port number.
User Response: Specify a valid port number and then resubmit the command.

ARS2074E  The Drive Letter value must be a single alphabetic character
Explanation: The drive letter that was specified is not a valid drive letter.
User Response: Specify a single alphabetic drive letter and then resubmit the command.

ARS2075E  A server must be chosen. If none are listed, use the Update Servers button to define one or more servers.
Explanation: The Logon command was attempted but a server was not specified.
User Response: Select a server from the list or use the Update Servers command to add a server. Then try the Logon command again.

ARS2076E  *** LOGIC ERROR: An unknown message id was returned by the Common Server
Explanation: OnDemand encountered a logic error.
User Response: Contact your IBM Service Representative.
ARS2077E • ARS2085E

ARS2077E  Mapping file 'file_name' for codepage codepage not found. The default will be used.
Explanation: The client could not find a file that is required for converting a codepage.
User Response: Verify that the client is correctly installed. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS2078E  Could not initialize Common Server. Locale path is 'path_name'
Explanation: The command failed when attempting to initialize the client software.
User Response: Verify that the client is correctly installed. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS2079E  The zoom specification must be in the range min_zoom%% to max_zoom%%
Explanation: The zoom percentage that was specified is not within the valid range.
User Response: Specify a correct value for the zoom percentage.

ARS2080E  The server name is required. Enter a valid server name.
Explanation: The server name that was specified is not valid.
User Response: Specify a valid server name.

ARS2081E  Unable to add the server. The server already exists.
Explanation: The name that was specified for the server already exists on the system.
User Response: Specify a name for the server that does not already exist on the system.

ARS2082E  The UNC name is required. Enter a valid UNC name (ex. \name).
Explanation: The UNC (Universal Naming Convention) name that was specified is not valid. UNC is a naming convention for describing network servers and share points on servers. UNC names start with two backslash characters followed by the server name. All other fields are separated by a single backslash character. For example: \server\share
User Response: Specify a valid UNC name.

ARS2083E  Insufficient memory is available to perform the operation
Explanation: There was not enough free memory available to run the command.
User Response: Determine why sufficient memory could not be allocated by looking at the operating system and application task status. You may need to stop other processes or reboot the PC and then resubmit the command.

ARS2084E  The client and server are incompatible. Reinstallation of the product is required.
Explanation: The client software and the server software are not the same version or are not compatible versions.
User Response: Upgrade the client software and / or the server software to the same version or to a compatible version.

ARS2085E  The server was unable to initialize. Contact your system administrator.
Explanation: The command failed when attempting to initialize the server.
User Response: Contact your IBM Service Representative.
ARS2086E  Connection cannot be established for the *hostname* server  
**Explanation:** The client failed when attempting to connect to the specific server.  
**User Response:** Verify that the server is properly configured and that the server program is running.

ARS2087E  Dynamic Load Library `*dll_name*` could not be found  
**Explanation:** The client failed when attempting to load the specified dynamic load library.  
**User Response:** Verify that the OnDemand software is installed correctly. If the problem persists, contact your IBM Service Representative.

ARS2088E  The server connection has timed out. You normally need to logoff, logon, and retry the operation. In some cases, an explicit logoff is not needed before the system invites you to logon.  
**Explanation:** The server forced the client to log off the server because the client did not perform an action on the server within the interval of time that is specified by the Inactivity Time Out value.  
**User Response:** To proceed, log off the server, log back on to the server, and then resubmit the command. A system administrator can increase the Inactivity Time Out value by starting the administrative client, logging on to the server, and opening the System Parameters dialog box for the server. See the online help for the System Parameters dialog box for more information about the Inactivity Time Out value.

ARS2089E  Information has been modified on the server. Please logoff, logon, and retry the operation.  
**Explanation:** The requested data has been modified on the server.  
**User Response:** You must log off of the server, log back on to the server, and then retry the operation.

ARS2090E  The server failed during a search operation  
**Explanation:** A server program encountered an error during a search operation.  
**User Response:** See the OnDemand System Log for other messages that are associated with the search. If the problem persists, contact your IBM Service Representative.

ARS2091E  The server failed while accessing folder data  
**Explanation:** A server program encountered an error when accessing a folder.  
**User Response:** See the OnDemand system Log for other messages that are associated with the folder operation. If the problem persists, contact your IBM Service Representative.

ARS2092E  The server failed while retrieving a named query  
**Explanation:** A server program encountered an error when retrieving a named query.  
**User Response:** See the OnDemand System log for other messages that are associated with the retrieve operation. If the problem persists, contact your IBM Service Representative.

ARS2093E  The server failed while updating a named query  
**Explanation:** A server program encountered an error when updating a named query.  
**User Response:** See the OnDemand System Log for other messages that are associated with the update operation. If the problem persists, contact your IBM Service Representative.

ARS2094E  The server failed while retrieving a document  
**Explanation:** A server program encountered an error when retrieving a document.  
**User Response:** See the OnDemand System Log for other messages that are associated with the retrieve operation. If the problem persists, contact your IBM Service Representative.
ARS2095E  The server failed while updating a document
Explanation: A server program encountered an error when updating a document.
User Response: See the OnDemand System Log for other messages that are associated with the update process. If the problem persists, contact your IBM Service Representative.

ARS2096E  The server failed while storing a document
Explanation: A server program encountered an error when storing a document.
User Response: See the OnDemand System Log for other messages that are associated with the load process. If the problem persists, contact your IBM Service Representative.

ARS2097E  The server failed while deleting a document
Explanation: A server program encountered an error when deleting a document.
User Response: See the OnDemand System Log for other messages that are associated with the delete process. If the problem persists, contact your IBM Service Representative.

ARS2098E  The server failed while retrieving a resource group
Explanation: A server program encountered an error when retrieving a resource group.
User Response: See the OnDemand System Log for other messages that are associated with the retrieve process. If the problem persists, contact your IBM Service Representative.

ARS2099E  The server failed while retrieving a storage set
Explanation: A server program encountered an error when retrieving a storage set.
User Response: See the OnDemand System Log for other messages that are associated with the retrieve process. If the problem persists, contact your IBM Service Representative.

ARS2100E  The server failed while updating user information
Explanation: A server program encountered an error when updating the user information.
User Response: See the OnDemand System Log for other messages that are associated with the update process. If the problem persists, contact your IBM Service Representative.

ARS2101E  The server failed while retrieving a note
Explanation: A server program encountered an error when retrieving an annotation.
User Response: See the OnDemand System Log for other messages that are associated with the retrieve process. If the problem persists, contact your IBM Service Representative.

ARS2102E  The server failed while storing a note
Explanation: A server program encountered an error when storing an annotation.
User Response: See the OnDemand System Log for other messages that are associated with the task. If the problem persists, contact your IBM Service Representative.

ARS2103E  The server failed while deleting a note
Explanation: A server program encountered an error when deleting an annotation.
User Response: See the OnDemand System Log for other messages that are associated with the delete process. If the problem persists, contact your IBM Service Representative.
ARS2104E  The server failed while updating an application

Explanation: A server program encountered an error when updating an application.

User Response: See the OnDemand System Log for other messages that are associated with the update. If the problem persists, contact your IBM Service Representative.

ARS2105E  The server failed while querying printers

Explanation: A server program encountered an error when running a query for printers.

User Response: See the OnDemand System Log for other messages that are associated with the query. If the problem persists, contact your IBM Service Representative.

ARS2106E  The server failed while printing

Explanation: A server program encountered an error when printing.

User Response: See the OnDemand System Log for other messages that are associated with the print process. If the problem persists, contact your IBM Service Representative.

ARS2107E  The User ID or Password is not valid for the server

Explanation: The userid or password is not valid for the instance of OnDemand.

User Response: Specify a userid and password that are valid for the instance of OnDemand.

ARS2108E  The new password must contain at least min_passwd_length characters

Explanation: An attempt was made to change a password, but the value that was specified for the new password does not contain the minimum number of characters that are required by the system.

User Response: Specify a new password that contains the minimum number of characters. A system administrator can set the minimum number of characters for a password by starting the administrative client, logging on to the server, and opening the System Parameters dialog box. See the online help for the System Parameters dialog box and the Minimum Password Length option for more information.

ARS2109E  The first and second specification of the new password are not the same

Explanation: An attempt was made to change a password, but the value that was specified for the Password does not match the value that was specified for the Verify Password.

User Response: Specify the exact same value in the Password and Verify Password fields.

ARS2110E  The current password is not correct

Explanation: The value that was specified for the Password does not match the password that is stored in the database.

User Response: Specify the correct password and try the command again.

ARS2111E  The user is not permitted to perform the operation

Explanation: The userid that was specified does not have permission to perform the operation.

User Response: Specify a userid that has permission to perform the operation or permit the user to perform the operation and then resubmit the command.

ARS2112E  The operation was unsuccessful because the database is read-only

Explanation: The database cannot be updated because it is read-only. The command cannot be run against a read-only instance of OnDemand.

User Response: Verify the name of the instance and try the command again.
ARS2113I  The folder cannot be opened because it does not contain any application groups accessible to the user. Contact your system administrator.

Explanation: The userid does not have access to any of the application groups that are contained in the folder.

User Response: Verify the name of the folder and the userid. Permit the userid to access one or more of the application groups that are contained in the folder. Then try to open the folder again.

ARS2114E  No search criteria have been specified

Explanation: A search command was attempted but no search criteria was specified.

User Response: Specify search criteria for at least one of the search fields and resubmit the search.

ARS2115E  A value must be specified for 'field'

Explanation: A search command was attempted but a value for a required field was not specified.

User Response: Specify a value for the field and resubmit the search.

ARS2116E  'value' is invalid for 'field'. A maximum of max_chars character(s) may be entered.

Explanation: The specified search string exceeds the maximum number of characters that are allowed for the field.

User Response: Specify a valid search string for the field and resubmit the search.

ARS2117E  Only one value was entered for 'field'. Enter a second value or choose a different comparison operator.

Explanation: A search by using a range was attempted but a valid range was not specified. A valid range consists of two values -- the low range and the high range.

User Response: Specify a valid range for the field or select a search operator that does not require a range. Then resubmit the search.

ARS2118E  'value' is invalid for 'field'. An integer value in the range 'min_range' to 'max_range' is required.

Explanation: The specified search string is not a valid integer value.

User Response: Specify a valid integer value for the field and resubmit the search.

ARS2119E  'value' is invalid for 'field'. A decimal value in the range 'min_decimal' to 'max_decimal' is required. A maximum of max_digits digits may be specified to the right of the decimal point.

Explanation: The specified search string is not a valid decimal value.

User Response: Specify a valid decimal value for the field and resubmit the search.

ARS2120E  'value' is invalid for 'field'. A date/time in the range 'min_date' to 'max_date' is required. Note that 2-digit years less than 70 are interpreted as year 20nn.

Explanation: The specified search string is not a valid date value.

User Response: Specify a valid date value for the field and resubmit the search.

ARS2121E  For 'field', the first value must not be greater than the second value

Explanation: A search by using a range was attempted but a valid range was not specified. The first value in the range must not be greater than the second value in the range.

User Response: Specify a valid range for the field and resubmit the search.

ARS2167I  No documents meet the search criteria
Explanation: The query was run, however, there were no documents that matched the search criteria.
User Response: To retrieve documents, change the search criteria and resubmit the query.

ARS2168E  The document for 'document' is not displayable or printable
Explanation: The specified document cannot be viewed or printed. This message is for your information only.
User Response: Select a document that can be displayed or printed.

ARS2169E  The argument 'value' is not a valid decimal number
Explanation: The specified search value is not a valid decimal number.
User Response: Specify a valid decimal number and try the search again.

ARS2170I  No arguments specified
Explanation: A search was attempted, but no search values were specified.
User Response: Specify one or more search values and try the search again.

ARS2171E  The argument 'value' was not specified
Explanation: A search was attempted, but a search value was missing from a required search field.
User Response: Specify a search value for the field and try the search again.

ARS2172E  The function 'function' was not found
Explanation: The client failed because the specified function was not found.
User Response: Contact your IBM Service Representative.

ARS2173E  The field 'field' was not found in this folder
Explanation: The specified field is not a valid field for the folder.
User Response: Verify the folder fields. Specify a valid field and try the command again.

ARS2174E  No mappings exist for the specified folder fields
Explanation: The folder fields are not mapped to application group fields.
User Response: Map the folder fields to application group fields and then resubmit the command.

ARS2175E  The environment variable 'environ_variable' was not found
Explanation: The command failed because the specified environment variable was not set.
User Response: Set the environment variable and then resubmit the command.

ARS2176I  The user specified does not have access to any folders
Explanation: The specified user does not have permission to access any folders.
User Response: Permit the user to access one or more folders. Then resubmit the command.
Unable to initialize environment. rc=rc

Explanation: The client failed when attempting to initialize the environment.

User Response: Configure the server to enable logging and then resubmit the command. See the Web Enablement Kit: Implementation Guide for help on how to enable logging and for help on other problem determination tools that are available in this environment. If the problem persists, contact your IBM Service Representative.

Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3116I  timestamp: 116: VOLUME CALCULATION STARTED
Explanation: This message is for your information only.
User Response: No action is required.

ARS3117E  timestamp: 117: VOLUME CALCULATION FAILED
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3118I  timestamp: 118: VOLUME CALCULATION COMPLETED
Explanation: This message is for your information only.
User Response: No action is required.

ARS3119I  timestamp: 119: VOLUME CALCULATION VOLUMES FILES BYTES [volumes] [files] [total]
Explanation: This message is for your information only.
User Response: No action is required.

ARS3120W  timestamp: 120: VOLUME INDEX CAPACITY EXCEEDED BYTES [bytes]
Explanation: The index exceeds the capacity of the media. If this is a multi-volume set, the index must fit on the first volume of the set.
User Response: Reduce the number of user-defined files. The user-defined files take up space that can be used by the index. Otherwise, reduce the number of documents or folders. Then resubmit the command.

ARS3121W  timestamp: 121: VOLUME DATA CAPACITY EXCEEDED VOLUME BYTES [volumes] [total]
Explanation: The data files for the specified volume exceed the capacity of the media.
User Response: Reduce the size of the data files and then resubmit the command. You can reduce the size of the data files by reducing the number of user-defined files or reducing the number of documents or folders.

ARS3122I  timestamp: 122: STORAGE SET CREATION STARTED
Explanation: This message is for your information only.
User Response: No action is required.

ARS3123E  timestamp: 123: STORAGE SET CREATION FAILED
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3134E  timestamp: 134: DATA FILE UPDATE ERROR APPLICATION GROUP FILE [appl_grp_name] [file_name]
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3135E  timestamp: 135: DATA FILE UPDATE ERROR RETURN CODES [RC=rc] [CTRC=ctrc]
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3136I  timestamp: 136: INDEX OPTIMIZATION STARTED
Explanation: This message is for your information only.
User Response: No action is required.

ARS3137E  timestamp: 137: INDEX OPTIMIZATION FAILED
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3138I  timestamp: 138: INDEX OPTIMIZATION COMPLETED
Explanation: This message is for your information only.
User Response: No action is required.

ARS3139E  timestamp: 139: INDEX CONVERSION ERROR FILE RETURN CODE [file_name] [rc]
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3140I  timestamp: 140: DATA DISTRIBUTION WRITING STARTED
Explanation: This message is for your information only.
User Response: No action is required.

ARS3141E  timestamp: 141: DATA DISTRIBUTION WRITING FAILED
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3142I  timestamp: 142: DATA DISTRIBUTION WRITING COMPLETED
Explanation: This message is for your information only.
User Response: No action is required.

ARS3143E  timestamp: 143: DATA DISTRIBUTION WRITING TIMEOUT
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.
Chapter 2. Common server messages

ARS3144E  timestamp: 144: WRITING VOLUME FILE FAILED [volume_number] rc
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3145I  timestamp: 145: RIMAGE EDITLIST CREATION STARTED VOLUME [rc]
Explanation: This message is for your information only.
User Response: No action is required.

ARS3146E  timestamp: 146: RIMAGE EDITLIST CREATION FAILED VOLUME [rc]
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3147I  timestamp: 147: RIMAGE EDITLIST CREATION COMPLETED VOLUME [rc]
Explanation: This message is for your information only.
User Response: No action is required.

ARS3148E  timestamp: 148: EDITLIST CREATION ERROR FILE RETURN CODE [file_name] [rc]
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3149I  timestamp: 149: RIMAGE IMAGE CREATION STARTED VOLUME [volume]
Explanation: This message is for your information only.
User Response: No action is required.

ARS3150E  timestamp: 150: RIMAGE IMAGE CREATION FAILED VOLUME FILE [file_name] [rc]
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3151I  timestamp: 151: RIMAGE IMAGE CREATION COMPLETED VOLUME [volume]
Explanation: This message is for your information only.
User Response: No action is required.

ARS3152E  timestamp: 152: RIMAGE IMAGE CREATION TIMEOUT VOLUME [volume]
Explanation: The image creation process timed out before the Rimage Image Server accepted the job. This condition is usually caused when the Image Server is not running on the Rimage PC or the Rimage image order timeout value that is specified with the -Y parameter of the ARSDD program is set too low.
User Response: Run the Rimage Image Server software on the Rimage PC. Otherwise, increase the value of the image order timeout parameter and then resubmit the command.

ARS3153I  timestamp: 153: RIMAGE IMAGE CREATION REQUEST ACCEPTED VOLUME [volume]
Explanation: This message is for your information only.
User Response: No action is required.
ARS3154I • ARS3163I

ARS3154I  timestamp: 154: RIMAGE IMAGE PRODUCTION STARTED VOLUME [volume]
Explanation: This message is for your information only.
User Response: No action is required.

ARS3155E  timestamp: 155: RIMAGE IMAGE PRODUCTION FAILED VOLUME FILE [volume] [rc]
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3156I  timestamp: 156: RIMAGE IMAGE PRODUCTION COMPLETED VOLUME [volume]
Explanation: This message is for your information only.
User Response: No action is required.

ARS3157E  timestamp: 157: RIMAGE IMAGE PRODUCTION TIMEOUT VOLUME [volume]
Explanation: The production process timed out before the Rimage Production Server accepted the job. This problem is usually caused when the Production Server is not running on the Rimage PC or the Rimage production order timeout parameter that is specified with the -Z parameter of the ARSDD program is set too low.
User Response: Run the Rimage Production Server software on the Rimage PC. Otherwise, increase the value of the production order timeout parameter and then resubmit the command.

ARS3158I  timestamp: 158: RIMAGE IMAGE PRODUCTION REQUEST ACCEPTED VOLUME [volume]
Explanation: This message is for your information only.
User Response: No action is required.

ARS3159E  timestamp: 159: UNABLE TO REMOVE ENTRY FROM RIMAGE IOF FILE [file_name]
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3160E  timestamp: 160: UNABLE TO REMOVE ENTRY FROM RIMAGE POF FILE [file_name]
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3161I  timestamp: 161: LABEL PROCESSING STARTED
Explanation: This message is for your information only.
User Response: No action is required.

ARS3162E  timestamp: 162: LABEL PROCESSING FAILED
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS3163I  timestamp: 163: LABEL PROCESSING COMPLETED
Explanation: This message is for your information only.
User Response: No action is required.
ARS3164W  
*timestamp: 163: NO DOCUMENTS RETURNED NQUERY [named_query]*

Explanation: A query was run and no documents were found that match the named query.

User Response: Verify that this is the expected result or verify that the named query is correct.

ARS3165E  
*timestamp: 164: UNABLE TO CREATE LABEL MERGE FILE [file_name] [rc]*

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS3166E  
*timestamp: 165: UNABLE TO OPEN USER-SUPPLIED MERGE FILE [file_name]*

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS3167I  
*timestamp: 165: LABEL TEMPLATE AVN [file_name] [avn_file_name]*

Explanation: This message is for your information only.

User Response: No action is required.

ARS3169I  
*timestamp: 166: LABEL TEMPLATE ID FILE [file_id] [label] [merge_file]*

Explanation: This message is for your information only.

User Response: No action is required.

ARS3171I  
*timestamp: 167: LABEL TEMPLATE ID FIELD CONTENTS [file_id] [label] [merge_field_number] [merge_field]*

Explanation: This message is for your information only.

User Response: No action is required.

ARS3173E  
*timestamp: 168: Unable to identify client type in file [type]*

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS3174E  
*timestamp: 169: Unable to replace client directory [directory_name]*

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS3175E  
*timestamp: 170: Unable to install client files in directory [directory_name]*

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS3176E  
*timestamp: 171: File does not exist or is inaccessible [file_name]*

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS3302I Usage: arsdd [options]

Version: version
-a <dir> Directory in which to run indexer (Default: Load Directory)
-c Clean and reset staging directory
-d <dir> Load directory (Required)
-e Warnings as errors
-g <id> Data distribution group id
-h <server> OnDemand library server name
-i <id> Data distribution file id
-j <name> Network name of data distribution machine
-k Keep load and status files
-l <dir> Control file directory (Required)
-m <n> Make n number of media sets
-n <cp> Codepage for data and indexes (Default: 819)
-o Show stored options
-p <password> OnDemand library server password
-r <dir> Rimage imaging directory (e.g. e:\rimage\images\)
-s <server> OnDemand data distribution server name (Required)
-u <userid> OnDemand library server userid
-v Verbose output
-w Store configuration options
-x <[63]/[74]> Media length (Default: 74)
   63: 63 minutes = ~580 Mbytes
   74: 74 minutes = ~640 Mbytes
-y <file> Rimage image order file name (Default: ondemand.iof)
-z <file> Rimage production order file name (Default: ondemand.pof)
-C <zipfile> (UNIX) Install OnDemand client files
-N Named queries may return no documents
-R (UNIX) Remove OnDemand data distribution server definition
-S <dir> (UNIX) Assign or change data distribution staging directory
-Y <seconds> Rimage image order timeout (Default: 3600)
-Z <seconds> Rimage production order timeout (Default: 3600)

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters.

ARS3303I Current Options for <server>:
   Control and definition file folder ... folder_name
   [-n] Codepage for data and indexes............ codepage
   [-S] Staging directory........................ directory_name

Explanation: This message is for your information only.
User Response: No action is required.

ARS3304I [-a] Indexer directory..................... index_directory
   [-d] Load directory........................... load_directory
   [-l] Log directory............................ log_directory
   [-h] OnDemand library server............... server

Explanation: This message is for your information only.
User Response: No action is required.

ARS3305I [-u] OnDemand library server userid........ userid
   [-p] OnDemand library server password.... password
   [-x] Media capacity.......................... ~capacity bytes
   [-j] Network name............................ network

Explanation: This message is for your information only.
User Response: No action is required.
ARS3306I  ARS4010I

ARS3306I  [-r] Rimage imaging directory............  imaging_directory
Rimage staged files directory.........  staged_directory
Rimage order file directory.........  order_directory
[-y] Rimage image order file name........  order_directory

Explanation: This message is for your information only.
User Response: No action is required.

ARS3307I  [-Y] Rimage image order timeout............  image_timeout  seconds
[-z] Rimage production order file name.....  file_name
[-Z] Rimage production order timeout.......  production_timeout  seconds

Explanation: This message is for your information only.
User Response: No action is required.

ARS3308E  timestamp: 030: Failure copying \file_name\ [rc1|rc2]

Explanation: An unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS4010I  Usage: arsdb [options] [table(s)]
Version: version
-- The OnDemand Database Configuration Tool --
Defaults to all tables
-c (DB2/MSSQL) Create Database
-d Drop Tables
-e Drop Indexes
-f Ignore DB Failures
-g (DB2/MSSQL) Start the Database
-h (DB2/MSSQL) Stop the Database
-i Import Data
-k (DB2) Activate the Database
-l (DB2) For Import/Export use IXF Format
  (MSSQL) For Import/Export use Native Format
-m (DB2/MSSQL) Maintenance
-o <filename> Output File name
-r Create Configuration Indexes
-s Run Statistics
-t Create Configuration Tables
-v Verbose
-x Export Data
-y <device> (DB2) Backup the Database Offline to the device
  (MSSQL) Complete Database backup to the device
-z <device> (DB2) Backup the Database Online to the device
  (MSSQL) Differential Database backup to the device
-I <od_inst> OnDemand Instance Name
-X (DB2) If -Y or -Z, don’t backup Tablespace USERSPACE1
-Y <device> (DB2) Backup the Database Tablespace(s) Offline to the device
-Z <device> (DB2) Backup the Database Tablespace(s) Online to the device

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
**ARS4011E**  The *database_engine database_name* database action failed due to an unexpected interrupt  
Explanation: The ARSDB program failed.  
User Response: Resubmit the command. If the problem persists, contact your IBM Service Representative.  

**ARS4012E**  Unable to initialize environment. rc=rc  
Explanation: Unexpected error occurred during the execution of this program.  
User Response: If the problem persists, contact your IBM Service Representative.  

**ARS4013E**  Unable to determine the database engine  
Explanation: The OnDemand database engine parameter is not specified correctly.  
User Response: Correct the OnDemand database configuration and then resubmit the command.  

**ARS4014E**  Unable to load >dll_name<  
Explanation: The ARSDB program failed when attempting to load the specified dynamic load library.  
User Response: Verify that the dynamic load library exists. Verify the file permissions. Then resubmit the command.  

**ARS4015I**  Starting the *database_engine database_name* database instance  
Explanation: This message is for your information only.  
User Response: No action is required.  

**ARS4016E**  Unable to start the *database_engine database_name* database instance  
Explanation: The ARSDB program failed when attempting to start the specified instance of OnDemand.  
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the instance could not be started. Correct the problem and then resubmit the command.  

**ARS4017I**  Activating the *database_engine database_name* database  
Explanation: This message is for your information only.  
User Response: No action is required.  

**ARS4018I**  Creating the *database_engine database_name* database  
Explanation: This message is for your information only.  
User Response: No action is required.  

**ARS4019E**  Unable to create the *database_engine database_name* database  
Explanation: The ARSDB program failed when attempting to create the database.  
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the database could not be created. Correct the problem and then resubmit the command.  

**ARS4020E**  Unable to configure data source *database_engine*  
Explanation: The ARSDB program failed when attempting to configure the database.  
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the database could not be configured. Correct the problem and then resubmit the command.
ARS4021I Backing up the database_engine database_name database online
Explanation: This message is for your information only.
User Response: No action is required.

ARS4022I Backing up the database_engine database_name database offline
Explanation: This message is for your information only.
User Response: No action is required.

ARS4023E Unable to connect to database_engine database_name database
Explanation: The ARSDB program failed when attempting to connect to the database.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not connect to the database. Correct the problem and then resubmit the command.

ARS4024I Are you sure you wish to drop the database tables and/or indexes:
Explanation: The ARSDB program issues a prompt before attempting to drop database tables or indexes.
User Response: Specify yes(y) to drop the database tables or indexes. Specify no(n) to keep the database tables or indexes.

ARS4025E Unknown table table_name
Explanation: The specified table is not defined to the system.
User Response: Resubmit the command with the name of one of the OnDemand system tables.

ARS4026I Creating table table_name
Explanation: This message is for your information only.
User Response: No action is required.

ARS4027E Unable to create table table_name
Explanation: The ARSDB program failed when attempting to create the specified table.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not create the table. Correct the problem and then resubmit the command.

ARS4028I Inserting default values into table table_name
Explanation: This message is for your information only.
User Response: No action is required.

ARS4029E Unable to insert into table table_name the values ( values )
Explanation: The ARSDB program failed when attempting to insert the specified default values into the specified table.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not insert the default values into the table. Correct the problem and then resubmit the command.
ARS4030I   Dropping index *index_name*
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4031E   Unable to drop index *index_name*
Explanation:  The ARSDB program failed when attempting to drop the specified index.
User Response:  Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not drop the index. Correct the problem and then resubmit the command.

ARS4032I   Dropping table *table_name*
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4033E   Unable to drop table *table_name*
Explanation:  The ARSDB program failed when attempting to drop the specified table.
User Response:  Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not drop the index. Correct the problem and then resubmit the command.

ARS4034I   Creating index *index_name*
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4035E   Unable to create index *index_name*
Explanation:  The ARSDB program failed when attempting to create the specified index.
User Response:  Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not create the index. Correct the problem and then resubmit the command.

ARS4036I   Exporting table *table_name*
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4037E   Unable to export table *table_name*
Explanation:  The ARSDB program failed when attempting to export the specified table.
User Response:  Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not export the table. Correct the problem and then resubmit the command.

ARS4038I   Importing table *table_name*
Explanation:  This message is for your information only.
User Response:  No action is required.
ARS4039E • ARS4040I

ARS4039E  Unable to import table table_name
Explanation: The ARSDB program failed when attempting to import the specified table.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not import the table. Correct the problem and then resubmit the command.

ARS4040I  Reorganizing table table_name
Explanation: This message is for your information only.
User Response: No action is required.

ARS4041E  Unable to reorganize table table_name
Explanation: The ARSDB program failed when attempting to reorganize the specified table.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not reorganize the table. Correct the problem and then resubmit the command.

ARS4042I  Updating runstat statistics for table table_name
Explanation: This message is for your information only.
User Response: No action is required.

ARS4043E  Unable to update runstat statistics on table table_name
Explanation: The ARSDB program failed when attempting to update statistics on the specified table.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not update the statistics on the table. Correct the problem and then resubmit the command.

ARS4044I  Stopping the database_engine database_name instance
Explanation: This message is for your information only.
User Response: No action is required.

ARS4045E  Unable to commit the database_engine database_name database work
Explanation: The ARSDB program failed when attempting to commit the transaction.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not commit the transaction. Correct the problem and then resubmit the command.

ARS4046E  Unable to terminate the database_engine database_name database connection
Explanation: The ARSDB program failed when attempting to disconnect from the database.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not disconnect from the database. Correct the problem and then resubmit the command.

ARS4047E  Unable to rollback the database_engine database_name database
Explanation: The ARSDB program failed when attempting to rollback a transaction.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional
messages to determine why the ARSDB program could not roll back the transaction. Correct the problem and then resubmit the command.

ARS4048I  Backing up the database_engine database_name tablespace tablespace_name at timestamp
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4049E  Unable to backup database_engine database_name tablespace to tablespace_name. rc=rc
Explanation:  The ARSDB program failed when attempting to backup the specified tablespace.
User Response:  Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to determine why the ARSDB program could not backup the tablespace. Correct the problem and then resubmit the command.

ARS4051I  Backing up the database_engine database_name database at timestamp
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4052E  Unable to backup database_engine database_name database to directory_name. rc=rc
Explanation:  The ARSDB program failed when attempting to backup the database.
User Response:  Resubmit the command with the -v (verbose) option. Use the information from the additional messages to correct the problem. Then resubmit the command.

ARS4053I  The database_engine database_name database was deactivated. Please use -k to activate the database
Explanation:  The database was successfully deactivated.
User Response:  Submit the ARSDB program with the -k parameter to activate the database.

ARS4054E  DB Error: text -- SQLSTATE=sqlstate, SQLCODE=sqlcode
Explanation:  The database failed.
User Response:  See your database message reference for more information.

ARS4055E  Unable to activate database database_name. SQLCODE = sqlcode
Explanation:  The ARSDB program failed when attempting to activate the database.
User Response:  Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command.

ARS4056E  Database activation is not supported under database_engine
Explanation:  The ARSDB program cannot be used to activate the database.
User Response:  To activate the database, use an activation function that is provided with the database management product that you are using with OnDemand.

ARS4057I  Timestamp for backup image is: timestamp
Explanation:  This message is for your information only.
User Response:  No action is required.
ARS4058E  Unable to backup database *database_name*. err=err

Explanation: The ARSDB program failed when attempting to backup the specified database.

User Response: Resubmit the command with the `-v` (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command.

ARS4059E  Database backup is not supported under *database_engine*

Explanation: The ARSDB program cannot be used to backup the database.

User Response: To backup the database, use a backup function that is provided with the database management product that you are using with OnDemand.

ARS4060E  Database clean logs is not supported under *database_engine*

Explanation: The ARSDB program cannot be used to clean the logs for the database.

User Response: To clean the logs for the database, use a log function that is provided with the database management product that you are using with OnDemand.

ARS4061E  Cannot create the OnDemand database using the Language *language*

Explanation: The ARSDB program failed when attempting to create the database.

User Response: Verify and correct the language specification. Then resubmit the command.

ARS4062I  Using Locale *locale* and Codeset *codeset*

Explanation: This message is for your information only.

User Response: No action is required.

ARS4063E  The *directory_name* directory does not exist

Explanation: The ARSDB program could not locate the specified directory.

User Response: Create the directory and set the directory permissions for a database directory. Then resubmit the command.

ARS4064E  The *database_name* database already exists

Explanation: The specified database already exists.

User Response: Verify the name of the database and then resubmit the command.

ARS4065E  The database name *database_name* is invalid

Explanation: The name specified for the database is not correct or supported.

User Response: Resubmit the command with a valid database name.

ARS4066E  The code page *codepage* or country code *country_code* is not valid

Explanation: The ARSDB program failed when attempting to create the database, because the code page or the country code was incorrect.

User Response: Correct the code page and the country code and then resubmit the command.
ARS4067E  Unable to create the database_name database. err=err
Explanation: The ARSDB program failed when attempting to create the database.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command.

ARS4068I  Updating the database_name database configuration
Explanation: This message is for your information only.
User Response: No action is required.

ARS4069E  The new path to the log is not valid
Explanation: The path name for the database log files is not a valid name.
User Response: Resubmit the command with a valid path name.

ARS4070E  Unable to update the database_name database configuration. SQLCODE = sqlcode
Explanation: The ARSDB program failed when attempting to update the database configuration.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command.

ARS4071I  Backing up the database_name database so that the updates can take effect
Explanation: This message is for your information only.
User Response: No action is required.

ARS4072E  Database creation is not supported under database_engine
Explanation: The ARSDB program cannot be used to create the database.
User Response: To create the database, use a create function that is provided with the database management product that you are using with OnDemand.

ARS4073I  Deactivating database database_name
Explanation: This message is for your information only.
User Response: No action is required.

ARS4074E  The DB2 instance has not been started
Explanation: The ARSDB program failed because the DB2 instance was not started.
User Response: Start the DB2 instance. Then resubmit the command.

ARS4075W  The database_name database was not activated
Explanation: This message is for your information only.
User Response: No action is required.

ARS4076E  Unable to deactivate database database_name. SQLCODE = sqlcode
Explanation: The ARSDB program failed when attempting to deactivate the database.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command. If the problem persists, contact your IBM Service Representative.
ARS4077E  Database deactivate is not supported under database_engine
Explanation: The ARSDB program cannot be used to deactivate the database.
User Response: To deactivate the database, use a deactivate function that is provided with the database management product that you are using with OnDemand.

ARS4078I  The database_instance instance has already been started
Explanation: This message is for your information only.
User Response: No action is required.

ARS4079E  Unable to start database database_name. SQLCODE = sqlcode
Explanation: The ARSDB program failed when attempting to start the database.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS4080E  Database start is not supported under database_engine
Explanation: The ARSDB program cannot be used to start the database.
User Response: To start the database, use a start function that is provided with the database management product that you are using with OnDemand.

ARS4081E  Unable to deactivate database database_name
Explanation: The ARSDB program failed when attempting to deactivate the database.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS4082E  Unable to stop database_engine. SQLCODE = sqlcode
Explanation: The ARSDB program failed when attempting to stop the database.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS4083E  Database stop is not supported under database_engine
Explanation: The ARSDB program cannot be used to stop the database.
User Response: To stop the database, use a stop function that is provided with the database management product that you are using with OnDemand.

ARS4084E  Unable to export table table_name. err=err
Explanation: The ARSDB program failed when attempting to export a table.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command. If the problem persists, contact your IBM Service Representative.
ARS4085E Export is not supported under database_engine

Explanation: The ARSDB program cannot be used to export a table.

User Response: To export a table, use an export function that is provided with the database management product that you are using with OnDemand.

ARS4086E Unable to import table table_name. err=err

Explanation: The ARSDB program failed when attempting to import a table.

User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS4087E Import is not supported under database_engine

Explanation: The ARSDB program cannot be used to import a table.

User Response: To import a table, use an import function that is provided with the database management product that you are using with OnDemand.

ARS4088E Unable to reorganize table table_name. SQLCODE = sqlcode

Explanation: The ARSDB program failed when attempting to reorganize a table.

User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS4089E Reorganization is not supported under database_engine

Explanation: The ARSDB program cannot be used to reorganize the database.

User Response: To reorganize the database, use a reorganization function that is provided with the database management product that you are using with OnDemand.

ARS4090E Unable to do a runstats on table table_name. err=err

Explanation: The ARSDB program failed when attempting to update the statistics for a table.

User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS4091E Runstats is not supported under database_engine

Explanation: The ARSDB program cannot be used to run database statistics.

User Response: To run database statistics, use a statistics function that is provided with the database management product that you are using with OnDemand.

ARS4092E The database_name database was deactivated, however there is still a connection to one or more nodes

Explanation: Only one node was deactivated, however, multiple nodes exist.

User Response: Verify that all nodes are deactivated before proceeding.

ARS4093E CoCreateInstance bulk copy object failed

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.
ARS4094E  Unable to connect to database
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS4095E  Filegroup backups for MSSQL should be done using the Database Maintenance Planner
Explanation: The ARSDB program cannot be used to run filegroup backups for SQL Server.
User Response: Use the Database Maintenance Planner in SQL Server to run filegroup backups.

ARS4096E  Differential backups for MSSQL should be done using the Database Maintenance Planner
Explanation: The ARSDB program cannot be used to run differential backups for SQL Server.

ARS4097E  CoCreate instance failed
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS4098E  CoInitialize failed
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS4099E  Creating the database_name database file
Explanation: This message is for your information only.
User Response: No action is required.

ARS4100E  Database DBFile db_file_name could not be added. HRESULT=hresult
Explanation: The database failed.
User Response: See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.

ARS4101E  GetFileGroup instance failed rc
Explanation: The database failed.
User Response: See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.

ARS4102E  Creating the database_name transaction log file
Explanation: This message is for your information only.
User Response: No action is required.

ARS4103E  Database log file could not be added. HRESULT=hresult
Explanation: The database failed.
User Response: See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.
ARS4104E  Get transaction log instance failed
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS4105I  Creating the database_name database with language language
Explanation: This message is for your information only.
User Response: No action is required.

ARS4106I  Creating the database_name server login
Explanation: This message is for your information only.
User Response: No action is required.

ARS4107W  Warning: The server login already exists
Explanation: The server login already exists.
User Response: The command continues because the login already exists. No additional action is necessary.

ARS4108E  The server login could not be created. HRESULT=hresult
Explanation: The database failed.
User Response: See your database message reference for more information.

ARS4109E  The database user could not be created. HRESULT=hresult
Explanation: The database failed.
User Response: See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.

ARS4110E  Unable to set language to language. HRESULT=hresult
Explanation: The database failed.
User Response: See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.

ARS4111E  Connect failed. HRESULT=hresult
Explanation: The database failed.
User Response: See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.

ARS4112E  Unable to start database_name. HRESULT=hresult
Explanation: The database failed.
User Response: See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.

ARS4113W  database_name has already been started
Explanation: The database has already been started.
User Response: Because the database is already started, you do not need to specify the start database parameter.
ARS4114E  •  ARS4201I

ARS4114E  Unable to stop database_name. HRESULT=hresult
Explanation:  The database failed.
User Response:  See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.

ARS4115I  Number of rows exported = rows_exported
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4116I  Number of rows imported = rows_imported
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4117E  Table table_name does not exist. HRESULT=hresult
Explanation:  The database failed.
User Response:  See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.

ARS4118E  action for library database_name failed with exception rc
Explanation:  The database failed.
User Response:  See the messages and codes publication of the database manager product that you are using with OnDemand for information about database errors.

ARS4119I  Creating links for the following file:
            file_name
            Do you wish to use DISK(1) or ADSM(2)?
            Please specify 1 or 2:
Explanation:  The ARSDB program issues a prompt to specify the type of archived log file user exit.
User Response:  Specify 1 (one) to maintain the log files on disk. Specify 2 (two) to use TSM to maintain the log files.

ARS4120E  SET RULES=STD failed
Explanation:  Unexpected error occurred during the execution of this program.
User Response:  If the problem persists, contact your IBM Service Representative.

ARS4200E  Creation of system_folder information failed due to an unexpected interrupt
Explanation:  The ARSSYSCR program failed.
User Response:  Resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS4201I  Deleting folder with fid = fid
Explanation:  This message is for your information only.
User Response:  No action is required.
ARS4202I Deleting named queries (if any) associated with folder/fid = fid
Explanation: This message is for your information only.
User Response: No action is required.

ARS4203I Deleting application group with agid = agid
Explanation: This message is for your information only.
User Response: No action is required.

ARS4204I Updating owner.table_name, may result in no updates
Explanation: This message is for your information only.
User Response: No action is required.

ARS4206I Updating owner.table_name
Explanation: This message is for your information only.
User Response: No action is required.

ARS4207I Adding to owner.table_name with Storage Set Id = sid
Explanation: This message is for your information only.
User Response: No action is required.

ARS4208I Adding to owner.table_name
Explanation: This message is for your information only.
User Response: No action is required.

ARS4209I Creation of system_folder information was successful
Explanation: This message is for your information only.
User Response: No action is required.

ARS4210E Creation of system_folder information failed
Explanation: The ARSSYSCR program failed when attempting to create the system definitions.
User Response: See the other messages that were generated by the ARSSYSCR program to determine the cause of the problem. Resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS4211E Failed while creating the OnDemand system_folder
Explanation: The ARSSYSCR program failed when attempting to create the system definitions.
User Response: See the other messages that were generated by the ARSSYSCR program to determine the cause of the problem. Resubmit the command. If the problem persists, contact your IBM Service Representative.
ARS4212I  ARS4302I

ARS4212I  Usage: arssyscr [-I <od_inst>] [-l | -m | -p ]
Version: version
-I System Log
-m System Migration
-o <filename> Output file name
-p OnDemand Publications
-I <od_inst> OnDemand Instance Name

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please refer to the OnDemand configuration guide.

ARS4300I  Usage: arsload [options] [load_file]
Version: version
-a <appl> The application within the application group
- A <field> MVS filename component to use for OnDemand application
-c <idx_dir> The directory to run the indexer
- C <class> OD/390 JES class to monitor
- d <dl_dir> The download directory
- E Invoke exits associated with ARS.RSADUPDT logical exit point
-f If load fails, unload the data
-F <form> OD/390 JES form to monitor
-g <appl_grp> The application group
- G <field> MVS filename component to use for OnDemand application group
(OD/390) WRITER.MVS.JOBNAME.DATASET.FORMS
- or -
(Otherwise) MVS.JOBNAME.DATASET.FORMS
Defaults to filename conventions
-G <field> MVS filename component to use for OnDemand application group
(OD/390) WRITER.MVS.JOBNAME.DATASET.FORMS
 Defaults to FORMS
-h <od_inst> OnDemand library server or instance name (same as -I)
-W <writer> (OD/390) JES writer to monitor
-Z <user_def> User-defined string passed to load user exit
-i Run the Indexer Only
-I <od_inst> OnDemand library server or instance name (same as -h)
-j <parm_file> Additional indexing parameters
-n Do not remove files
-p <passwd> Password
-s <input>
(OD/390) JCL ddname to use as input (i.e., INPUT)
-t <seconds> Time interval to sleep
 Defaults to seconds seconds
-u <userid> Userid
-U <file> File to find default userid/passwd
 Defaults to file_name
-v Verbose
-W <writer> (OD/390) JES writer to monitor
-Z <user_def> User-defined string passed to load user exit

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS4302I  timestamp  -- Indexing started, bytes bytes to process

Explanation: This message is for your information only.

User Response: No action is required.

ARS4312I • ARS4320I

ARS4312I  
timestamp  --  Loading started, bytes bytes to process

Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4313E  The postprocessor command >command< failed on the DB file >db_file_name< for the file >file_name<

Explanation:  The ARSLOAD program failed when attempting to run the specified postprocessor command.
User Response:  Verify the full path name of the command. Verify that the command runs successfully outside of the OnDemand environment. Then resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command.

ARS4314E  File >file_name< cannot be processed because the Application Group cannot be determined

Explanation:  The ARSLOAD program failed because the name of the application group to load was not specified or could not be derived from the input file name.
User Response:  Resubmit the command with the name of the application group or verify that the name of the input file contains the name of the application group and then resubmit the command. See the OnDemand administration guide for more information about how the ARSLOAD program can derive the name of the application group from the input file name.

ARS4315I  Processing file >file_name<

Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4316E  File >file_name< cannot be found for processing

Explanation:  The ARSLOAD program could not find the specified file.
User Response:  Verify that the file exists and verify the file permissions. Then resubmit the command.

ARS4317I  Processing successful for file >file_name<

Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4318E  Processing failed for file >file_name<

Explanation:  The ARSLOAD program failed when processing the specified file.
User Response:  Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command.

ARS4319W  Unloading of data was NOT performed

Explanation:  The ARSLOAD program failed. However, the ARSLOAD program did not unload the data.
User Response:  Unload the data by submitting the ARSADMIN program with the UNLOAD function. Otherwise, specify the unload parameter when you submit the ARSLOAD program.

ARS4320I  
timestamp  --  Unloading started

Explanation:  This message is for your information only.
User Response:  No action is required.
ARS4321I  timestamp -- Unloading of data was successful
Explanation: This message is for your information only.
User Response: No action is required.

ARS4322E  timestamp -- Unloading of data failed
Explanation: The ARSLOAD program failed when attempting to unload data.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command.

ARS4323E Unable to log load information
Explanation: The ARSLOAD program failed when attempting to obtain the log load information.
User Response: Resubmit the command with the -v (verbose) parameter. Use the information from the additional messages to correct the problem. Then resubmit the command.

Explanation: The ARSLOAD program failed and renamed the specified file.
User Response: See the other messages that the ARSLOAD program generated. Correct any problems and then resubmit the command.

ARS4325E The -n option should not be used when running this command as a daemon. This will cause the files to be recursively loaded.
Explanation: An attempt was made to start the ARSLOAD program as a daemon, however, the -n parameter was specified. The -n parameter is not valid when running the ARSLOAD program as a daemon.
User Response: Resubmit the command without the -n parameter.

ARS4326E Could not connect to server to establish log id
Explanation: The ARSLOAD program failed when attempting to obtain the log id.
User Response: Verify that the server on which you want to load the data is running. Then resubmit the command.

ARS4327E Processing has stopped. The remaining files will NOT be processed.
Explanation: The ARSLOAD program failed.
User Response: See the messages that were generated by the ARSLOAD program. Resubmit the ARSLOAD program to load the files that were not loaded.

ARS4328E ARSSAPIR failed: rc = rc sapi_rc(sapi_rsn)
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

ARS4329E SVC 99 failed for file file_name: S99ERROR = error, S99INFO = info
Explanation: Unexpected error occurred during the execution of this program.
User Response: If the problem persists, contact your IBM Service Representative.

   -s <secs>  Seconds to add
   -t Archive internal time format
   -y <years>  Years to add
   -z Archive internal date/time format w/TZ

Explanation:  An incorrect parameter was specified for the command.
User Response:  Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS4501I  Today: timestamp

Explanation:  This message is for your information only.
User Response:  No action is required.

ARS4502E  Failed

Explanation:  The ARSDATE program could not perform the requested date conversion.
User Response:  Verify that the date or date / time value is correct and then resubmit the command.
ARS4600I Usage: arsadm [user | group | printer | set]

Version: version

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS4601I Usage: arsdoc [get | query | add | update | delete | print]

Version: version

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS4602E Unknown command >command<

Explanation: Unable to run the specified command.

User Response: Verify that the command exists and verify the file permissions. Then resubmit the command.

ARS4700I OnDemand Command Prompt

Explanation: This message is for your information only.

User Response: No action is required.

ARS4701E Unknown command to execute

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS4702E Unable to get command >command< status, errno=errno

Explanation: Unexpected error occurred during the execution of this program.

User Response: If the problem persists, contact your IBM Service Representative.

ARS4703E Unable to execute command >command<, errno=errno

Explanation: Unable to run the specified command.

User Response: Verify that the command exists and verify the file permissions. Then resubmit the command.

ARS4800I Received index data >text<

Explanation: This message is for your information only.

User Response: No action is required.

ARS4801I Returned index data >text<

Explanation: This message is for your information only.

User Response: No action is required.

ARS4802I All index data has been returned.

Explanation: This message is for your information only.

User Response: No action is required.
ARS4804I  Locale = ’locale’, number of bytes received = ’num_bytes’, hex value = ’hex_value’

Explanation: This message is for your information only.

User Response: No action is required.

ARS4805I  Locale = ’locale’, number of bytes received = ’num_bytes’, hex value = ’hex_value’

Explanation: This message is for your information only.

User Response: No action is required.

ARS4806I  Initializing arscmnst. Version: version

Explanation: This message is for your information only.

User Response: No action is required.

ARS4900I  Usage: arspdoci [parmdd filename]

Version: version

Coordinates: Metrics (units X and Y are specified in)

Inches | Centimeters | Millimeters

Fontlib: Font directory
Inputdd: Input filename
Msgdd: Message filename - default is stdout
Outputdd: Output filename pattern
TraceDD: Trace file - default is stderr
Trace: What to trace - default is off

API | WORDS | FCNS | INDEX | ALL

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the Indexing Reference.

ARS4901I  parameter

Explanation: This message is for your information only.

User Response: No action is required.

ARS4902I  Number of input pages = pages

Explanation: This message is for your information only.

User Response: No action is required.

ARS4903E  keyword keyword contains non-numeric identifier

Explanation: The identifier for the specified keyword must be a number from 1 to 16 (TRIGGER parameter) or 1 to 32 (INDEX or FIELD parameter).

User Response: Correct the identifier and then resubmit the command.

ARS4904E  Error allocating bytes bytes memory

Explanation: The PDF indexer was unable to allocate the requested amount of memory.

User Response: Decrease the load on the system or increase the amount of memory available to the PDF indexer and then resubmit the command.

| ARS4906E    | Unknown parameter: **parameter**                                              |
| **Explanation:** | The specified string is not a valid PDF indexer parameter. |
| **User Response:** | Correct the parameter and then resubmit the command. |

| ARS4907E    | Incorrect index file definition                                               |
| **Explanation:** | The file specified for the INDEXDD file definition parameter is not a valid file name. |
| **User Response:** | Correct the file name specified on the file definition parameter and then resubmit the command. |

| ARS4908E    | Incorrect input file definition                                               |
| **Explanation:** | The file specified for the INPUTDD file definition parameter is not a valid file name. |
| **User Response:** | Correct the file name specified on the file definition parameter and then resubmit the command. |

| ARS4909E    | Incorrect output file definition                                              |
| **Explanation:** | The file specified for the OUTPUTDD file definition parameter is not a valid file name. |
| **User Response:** | Correct the file name specified on the file definition parameter and then resubmit the command. |

| ARS4910E    | Incomplete indexing parameters supplied                                      |
| **Explanation:** | The current set of indexing parameters does not permit the PDF indexer to create index data. |
| **User Response:** | Correct the parameters and then resubmit the command. |

| ARS4911E    | Error opening INDEX file **file_name**                                       |
| **Explanation:** | The specified file does not exist or the file permissions do not allow the file to be opened. |
| **User Response:** | Verify that the file exists and verify that the file permissions allow the file to be opened. Then resubmit the command. |

| ARS4912E    | Error opening Input file **file_name**                                       |
| **Explanation:** | The specified file does not exist or the file permissions do not allow the file to be opened. |
| **User Response:** | Verify that the file exists and verify that the file permissions allow the file to be opened. Then resubmit the command. |

| ARS4913E    | Error opening Parameter file **file_name**                                    |
| **Explanation:** | The specified file does not exist or the file permissions do not allow the file to be opened. |
| **User Response:** | Verify that the file exists and verify that the file permissions allow the file to be opened. Then resubmit the command. |

| ARS4914E    | Trigger(s) not found by page **page**                                        |
| **Explanation:** | The PDF indexer did not find a trigger by the specified page number. The INDEXSTARTBY parameter determines the page number by which the PDF indexer must find a trigger and begin indexing. |
| **User Response:** | Verify the page number that is specified on the INDEXSTARTBY parameter. If the page number is correct, verify the TRIGGER parameters. Then resubmit the command. |
ARS4915E  Field(s) not found by page page

Explanation: The PDF indexer did not find a field by the specified page number. The INDEXSTARTBY parameter determines the page number by which the PDF indexer must find a trigger and begin indexing for a field.

User Response: Verify the page number that is specified on the INDEXSTARTBY parameter. If the page number is correct, verify the FIELD parameters. Then resubmit the command.

ARS4916E  Failed Adobe Toolkit Initialization re=rc Error string : string

User Response: Verify the directories that are specified on the FONTLIB and TEMPDIR parameters. Verify the directory permissions. Verify that the directories that are named on the FONTLIB parameter provide access to the fonts that are required by the PDF indexer. Verify that the directory that is named on the TEMPDIR parameter contains sufficient free space to process the input file. If the problem persists, contact your IBM Service Representative.

ARS4917E  Create of new Document Segment failed

Explanation: The Adobe toolkit returned an error when trying to create a new document segment.

User Response: Verify the directories that are specified on the FONTLIB and TEMPDIR parameters. Verify the files and directories that are named on the INPUTDD and OUTPUTDD parameters. Verify the file and directory permissions. Verify that the directories that are named on the FONTLIB parameter provide access to the fonts that are required by the PDF indexer. Verify that the directory that is named on the TEMPDIR and OUTPUTDD parameters contains sufficient free space to process the input file. If the problem persists, contact your IBM Service Representative.

ARS4918E  Page extraction failed!

Explanation: The Adobe toolkit returned an error when trying to extract pages for a new segment.

User Response: Verify the directories that are specified on the FONTLIB and TEMPDIR parameters. Verify the files and directories that are named on the INPUTDD and OUTPUTDD parameters. Verify the file and directory permissions. Verify that the directories that are named on the FONTLIB parameter provide access to the fonts that are required by the PDF indexer. Verify that the directory that is named on the TEMPDIR and OUTPUTDD parameters contains sufficient free space to process the input file. If the problem persists, contact your IBM Service Representative.

ARS4919E  Word search or extraction error

Explanation: The Adobe toolkit returned an error while searching the PDF document.

User Response: Verify the directories that are specified on the FONTLIB and TEMPDIR parameters. Verify the directory permissions. Verify that the directories that are named on the FONTLIB parameter provide access to the fonts that are required by the PDF indexer. Verify that the directory that is named on the TEMPDIR parameter contains sufficient free space to process the input file. If the problem persists, contact your IBM Service Representative.

ARS4920E  Error during Distil re=rc Error string : string Check the Distiller messages

Explanation: The Acrobat Distiller returned an error while trying to distill the input file.

User Response: Use the Distiller output messages to determine the cause and resolution of the error. After correcting the error, resubmit the command.

ARS4921E  The Input file contains an unsupported data type

Explanation: The input file does not contain Postscript or PDF data.

User Response: Verify that the correct file is named on the INPUTDD parameter. Verify that the file named on the INPUTDD parameter contains PostScript or PDF data. Then resubmit the command.
ARS4922I  ARS4923E  ARS4924E  ARS4925I  ARS4926I  ARS4927I  ARS4928I  ARS4929I

ARS4922I ARSPDCII completed code rc
Explanation: The PDF indexer completed processing the input data with the completion code listed.
User Response: No action is required.

ARS4923E action version rc string
Explanation: A message that displays the product version and release.
User Response: No action is required.

ARS4924E Error executing action API rc =rcError string: string
User Response: Verify the directories that are specified on the FONTLIB and TEMPDIR parameters. Verify the directory permissions. Verify that the directories named on the FONTLIB parameter provide access to the fonts that are required by the PDF indexer. Verify that the directory named on the TEMPDIR parameter contains sufficient free space to process the input file. If the problem persists, contact your IBM Service Representative.

ARS4925I Usage: arspdump -f filename [-F font_dir] [-h] [-o output file]
[p page number] [-t temp dir]
Version: version
-f: PDF file name
-F: Font directory
-h: This message
-o: Output file (default is stdout)
-p: Specifies the page number (default is all pages)
-t: Temp directory
Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the Indexing Reference.

**Explanation:** This message is for your information only.
**User Response:** No action is required.

| **ARS5001I**  *program* accepts no parameters
**Explanation:** The specified program does not expect any parameters to be passed on the JCL PARM parameter.
**User Response:** Remove the parameters and rerun the program.

| **ARS5002I**  The path to *program* could not be determined
**Explanation:** An attempt was made to run the specified program. However the path to the program could not be determined.
**User Response:** Search the problem reporting database for a fix for the problem. If no fix exists, please contact the IBM Support Center.

| **ARS5004I**  fldata() failed for *file_name* (RC: *int_rc* (X*hex_rc*))
**Explanation:** An unexpected error occurred attempting to determine the file information for the file.
**User Response:** Search the problem reporting database for a fix for the problem. If no fix exists, please contact the IBM Support Center.

| **ARS5005I**  Syntax error - keyword delimiter not found
**Explanation:** A keyword delimiter was not found.
**User Response:** Correct the error and re-run the job.

| **ARS5006I**  Unrecognized keyword: *keyword*
**Explanation:** A keyword was found that was not valid
**User Response:** Correct the error and re-run the job.

| **ARS5007I**  Keyword operand not supplied
**Explanation:** A keyword operand was not supplied.
**User Response:** Supply the missing operand and re-run the job.

| **ARS5008I**  Operand rightside delimiter not found
**Explanation:** The rightside delimiter for a keyword operand was not found.
**User Response:** Supply the missing delimiter and re-run the job.

| **ARS5009I**  Operand leftside delimiter not found
**Explanation:** The leftside delimiter for a keyword operand was not found.
**User Response:** Supply the missing delimiter and re-run the job.
ARS5010I Invalid operand length
Explanation: The operand for a keyword was too long for the keyword.
User Response: Shorten the operand and re-run the job.

ARS5011I True/False operand expected
Explanation: A true (true, yes, or 1) or false (false, no, or 0) was expected as the operand of the keyword.
User Response: Correct the operand and re-run the job.

ARS5012I Operand does not consist of all decimal digits
Explanation: The operand must be all numeric.
User Response: Correct the operand and re-run the job.

ARS5013I Control statements processing completed - RC=int_rc (X'hex_rc')
Explanation: Parameter file processing has completed. The maximum return code is displayed.
User Response: No action is required.

ARS5014I Unable to initialize environment for instance. RC=rc
Explanation: The environment could not be initialized for the specified instance.
User Response: Verify that the instance name is correct and corresponds to an instance in the ars.ini file and re-run the job.

ARS5015I ODINSTANCE must be specified
Explanation: The ODINSTANCE keyword is required.
User Response: Specify the ODINSTANCE keyword and re-run the job.

ARS5016I Storage sets sset1 and sset2 contain the same storage node nodename
Explanation: The same node name appears in two storage sets. ARSEXPIR cannot determine which nodeid to use.
User Response: Remove the duplicate node from one of the storage sets.

ARS5017I Invalid message id msgid
Explanation: A message was attempted to be issued for which no message template exists.
User Response: Search the problem reporting database for a fix for the problem. If no fix exists, please contact the IBM Support Center.

ARS5018I Error occurred processing ARSMVSSR. RC = rc1 (rc2-rsn)
Explanation: The ARSMVSSR function was called to extract the SMF records, however it encountered a problem. rc1 indicates the type of error:
1 ATTACH failed
2 SORT failed
3 BPX1OPN failed
4 BPX1WRT failed
rc2 and rsn contain error related return and reason codes.
User Response: Search the problem reporting database for a fix for the problem. If no fix exists, please contact the IBM Support Center.
ARS5019I  ARS5024I

ARS5019I  Arsadm returned invalid node on line linenum. Text=text

Explanation: The ARSADM program was called to retrieve a list of the OnDemand storage nodes. However, the list returned was not formatted correctly. The message contains the line number and the first 200 characters of the line.

User Response: Search the problem reporting database for a fix for the problem. If no fix exists, please contact the IBM Support Center.

ARS5020I  SORT returned no data

Explanation: The sort process indicated that objects were found that were to be deleted. However, the file that was supposed to contain the data either does not exist or contains zero bytes.

User Response: Search the problem reporting database for a fix for the problem. If no fix exists, please contact the IBM Support Center.

ARS5021I  text

Explanation: The message text is produced when requested under the direction of the IBM Support Center.

User Response: Provide the message text to the Support Center.

ARS5022I  Sort complete. num_objs objects returned.

Explanation: The sort step has completed reading all the SMF records. num_objs were found that are candidates for unloading.

User Response: No action is required.

ARS5023I  cmd returned rc. Parms=>parms<

Explanation: A non-zero return value was provided by the cmd. This message provides the parms that were used to invoke the command.

User Response: Search the problem reporting database for a fix for the problem. If no fix exists, please contact the IBM Support Center.

ARS5024I  ARSEXPIR version invoked on tstamp

Explanation: ARSEXPIR was invoked.

User Response: No action is required.
ARS6000I  Usage: arsdoc add -h hostname [-u <userid>] [-p <passwd>] [-v]
  (-F <parmfile> | (-i <sql_query> | -q <namedquery>)
  -o <filename>] [-f <foldername>] -a <name> (-g <name> | -G <name>)
  -n field1=value1 [-O] [-S <startdate,enddate,[format]>])

  Version: version
  -a <name> Application Name
  -f <foldername> OnDemand folder (required in parm file)
  -g <name> Application Group Name
  -h <hostname> OnDemand Hostname (command line only)
  -i <sql_query> SQL query string
  -n <field1=value1> One or more database field names and values
  -o <filename> Data file name
  -p <passwd> OnDemand User Login Password (command line only)
  -q <namedquery> Public named query
  -u <userid> OnDemand User Login Name (command line only)
  -v Verbose (command line only)
  -F <parmfile> Requests parameter file (command line only)
  -G <name> Application Group Name
  -O Database fields values are not required
  -S <startdate,enddate[,format]> Segment date range

  Flags in a parameter file must be delimited by brackets EX: [-f foldername]

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

Chapter 2. Common server messages

ARS6001I  Usage: arsdoc update -h hostname [-u <userid>] [-p <passwd>] [-v]
  (-F <parmfile> | (-i <sql_query> | -q <namedquery>)
  [(-f <foldername>] (-g <name> | -G <name>) -n field1=value1
  [-S <startdate,enddate,[format]>])

  Version: version
  -f <foldername> OnDemand folder (required in parm file)
  -g <name> Application Group Name
  -h <hostname> OnDemand Hostname (command line only)
  -i <sql_query> SQL query string
  -n <field1=value1> One or more database field names and values
  -p <passwd> OnDemand User Login Password (command line only)
  -q <namedquery> Public named query
  -u <userid> OnDemand User Login Name (command line only)
  -v Verbose (command line only)
  -F <parmfile> Requests parameter file (command line only)
  -G <name> Application Group Name
  -O Database fields values are not required
  -S <startdate,enddate[,format]> Segment date range

  Flags in a parameter file must be delimited by brackets EX: [-f foldername]

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
ARS6002I • ARS6003I

ARS6002I  Usage: arsdoc delete -h hostname [-u <userid>] [-p <passwd>] [-v]
            (-F <parmfile> | ((-i <sql_query> | -q <namedquery>)
            [-f <foldername>] [-G <name>] [-S <startdate,enddate,[format]>>))

    Version: version
    -f <foldername> OnDemand folder (required in parm file)
    -h <hostname> OnDemand Hostname (command line only)
    -i <sql_query> SQL query string
    -p <passwd> OnDemand User Login Password (command line only)
    -q <namedquery> Public named query
    -u <userid> OnDemand User Login Name (command line only)
    -v Verbose (command line only)
    -F <parmfile> Requests parameter file (command line only)
    -G <name> Application Group Name
    -S <startdate,enddate,[format]> Segment date range

Flags in a parameter file must be delimited by brackets EX: [-f foldername]

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS6003I  Usage: arsdoc get -h hostname [-u <userid>] [-p <passwd>] [-s] [-v]
          (-F <parmfile> | ((-i <sql_query> | -q <namedquery> | 
          -X <load_id> [-x <load_id>] [-f <foldername>] [-G <name>] 
          [-S <startdate,enddate,[format]>>))

    Version: version
    -a Include resource group
    -c Store documents in one file
    -d <dir> Directory to store files
    -f <foldername> OnDemand folder (required in parm file)
    -g Create generic indexer file
    -h <hostname> OnDemand Hostname (command line only)
    -i <sql_query> SQL query string
    -n Do not use bulk retrieve
    -o <filename> Output file name (required in parm file)
    -p <passwd> OnDemand User Login Password
    -q <namedquery> Public named query
    -s <seconds> delay time between requests (command line only)
    -u <userid> OnDemand User Login Name
    -x <load_id> LoadId to use for OnDemand
    -v Verbose (command line only)
    -F <parmfile> Requests parameter file (command line only)
    -G <name> Application Group Name
    -L <max_docs> Maximum documents to retrieve
    -N Use Application group and application names in file name
    -S <startdate,enddate,[format]> Segment date range
    -X <load_id> LoadId to use for OnDemand

Flags in a parameter file must be delimited by brackets EX: [-f foldername]

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
ARS6004I Usage: arsdoc query -h hostname [-u <userid>] [-p <passwd>] [-v]
   (-F <parmfile> | (-i <sql_query> | -q <namedquery> | -X <load_id>)[-x <load_id>] [-f <foldername>] [-G <name>]
   [-e <delim>] [-H] [-I] [-N <(field1)>][-n] [-o <filename>]
   [-d <dir>] [-L <max_hits>] [-S <startdate,enddate,[format]>]])

Version: version
-d <dir> Directory to write output file
-e <delim> separator between database values
-f <foldername> OnDemand folder (required in parm file)
-h <hostname> OnDemand Hostname (command line only)
-i <sql_query> SQL query string
-n Add line numbers in output file
-o <filename> Output file name (required in parm file)
-p <passwd> OnDemand User Login Password
-q <namedquery> Public named query
-u <userid> OnDemand User Login Name
-x <load_id> LoadId to use for OnDemand
-v Verbose (command line only)
-F <parmfile> Requests parameter file (command line only)
-G <name> Application Group Name
-D Append the document handle to each record in the file
-H Build a header record
-I Append the LoadId to each record in the file
-L <max_hits> Maximum hits to process
-N <(field1)> One or more database field names; defines order in file
-S <startdate,enddate,[format]> Segment date range
-X <load_id> LoadId to use for OnDemand

Flags in a parameter file must be delimited by brackets EX: [-f foldername]

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS6005I Usage: arsdoc print -h hostname [-u <userid>] [-p <passwd>] [-v]
   (-F <parmfile> | (-i <sql_query> | -q <namedquery>)
   [-f <foldername>] [-G <name>] [-P <prtr>] [-L <max_docs>]
   [-S <startdate,enddate,[format]>]])

Version: version
-f <foldername> OnDemand folder (required in parm file)
-h <hostname> OnDemand Hostname (command line only)
-i <sql_query> SQL query string
-p <passwd> OnDemand User Login Password (command line only)
-q <namedquery> Public named query
-u <userid> OnDemand User Login Name (command line only)
-v Verbose (command line only)
-F <parmfile> Requests parameter file (command line only)
-G <name> Application Group Name
-L <max_docs> Maximum documents to retrieve
-P <prtr> System printer name
-S <startdate,enddate,[format]> Segment date range

Flags in a parameter file must be delimited by brackets EX: [-f foldername]

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
ARS6006E  Unable to get folder information. The folder does not exist or the user does not have permission to access the folder.

Explanation: The command failed when attempting to find the specified folder on the specified server.

User Response: Verify that the folder exists on the server. Verify that the user has permission to access the folder. Then resubmit the command.

ARS6007E  The server failed during a search operation. View the System Log for additional messages.

Explanation: The command failed when attempting a query for documents.

User Response: Verify that the SQL string is a valid SQL query and that the database field names that are specified in the SQL string are valid. Then resubmit the command.

ARS6008E  The segment start date or end date is not valid.

Explanation: The segment start date or the segment end date could not be converted to the internal date format.

User Response: Verify that the segment dates are valid date values and that the date values are in the correct date format.

ARS6009E  A cancel request was received during a server request.

Explanation: Unexpected error occurred.

User Response: See the OnDemand System Log for other messages that are associated with the command. Use the information in the messages to correct the problem and then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS6010E  The server operation failed.

Explanation: The command failed when attempting a query or retrieval request.

User Response: See the OnDemand System Log for other messages that are associated with the command. Use the information in the messages to correct the problem and then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS6011E  The error occurred on line number line_number.

Explanation: The command failed with an error on the specified line number.

User Response: See the OnDemand System Log for other messages that are associated with the command. Use the information in the messages to correct the problem and then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS6012E  Unable to read parameter file 'file_name'.

Explanation: The command failed when attempting to read a record from the specified parameter file.

User Response: Verify and correct the parameter file and then resubmit the command.

ARS6013E  The host name or address must be provided to continue the operation.

Explanation: The host name or IP address was not provided on the command line.

User Response: Resubmit the command and specify the -h parameter and the host name or IP address of the server on the command line.
ARS6014E The folder name must be provided to continue the operation.

Explanation: The folder name was not provided.

User Response: Resubmit the command and specify the -f parameter and the name of the folder.

ARS6015E Printer 'printer_name' was not found.

Explanation: The specified printer was not found on the server.

User Response: Verify that the printer exists on the server and that the user has permission to access the printer. Then resubmit the command.

ARS6016E The output file name 'file_name' exceeds a maximum length of length.

Explanation: The number of characters in the output file name exceeds the maximum allowable length.

User Response: Change the name of the output file so that the length of the file name does not exceed the maximum allowable length. Then resubmit the command.

ARS6017E The user does not have authority to add documents.

Explanation: The application group document permissions for the user do not include the authority to add documents.

User Response: Resubmit the command with a userid that has permissions to add documents or change the application group document permissions to include the authority to add documents and then resubmit the command.

ARS6018E The user does not have authority to delete documents.

Explanation: The application group document permissions for the user does not include the authority to delete documents.

User Response: Resubmit the command with a userid that has permissions to delete documents or change the application group document permissions to include the authority to delete documents and then resubmit the command.

ARS6019E The user does not have authority to update documents.

Explanation: The application group document permissions for the user does not include the authority to update documents.

User Response: Resubmit the command with a userid that has permissions to update documents or change the application group document permissions to include the authority to update documents and then resubmit the command.

ARS6020E The database field 'database_name' was not found in the application group.

Explanation: The database field name was not found in the application group.

User Response: Verify that the name of the database field is the same as a database field in the application group. Then resubmit the command.

ARS6021E The application group name must be provided to continue the operation.

Explanation: The application group name was not provided.

User Response: Resubmit the command with a valid application group name.
ARS6022E  Application group 'applgrp_name' was not found in folder 'folder_name'.

Explanation: The specified application group cannot be searched from the specified folder.

User Response: Verify that the application group can be searched from the folder. Verify that the user has permissions to access the application group. Then resubmit the command.

ARS6023E  The -s flag can only be used when a parameter file name is provided using the -F flag.

Explanation: The -s parameter specifies the amount of time to delay between requests to the server. The -s parameter is not applicable when only one request is made to the server.

User Response: Resubmit the command without the -s parameter.

ARS6024E  The -N and -c flags must be specified when the -g flag is used.

Explanation: The -g parameter, the -N parameter, and the -c parameter are used together to generate a generic index file and the output file.

User Response: Resubmit the command with the -N parameter and the -c parameter.

ARS6025E  The -c or -g flag cannot be used when an output file name contains database field names.

Explanation: The output file name will be generated from the database field names. Documents must be written to separate files if this option is used.

User Response: Resubmit the command without the -c parameter or the -g parameter.

ARS6026I  arsdoc completed.

Explanation: This message is for your information only.

User Response: No action is required.

ARS6027E  The application name must be provided to continue the operation.

Explanation: The application name was not specified.

User Response: Resubmit the command with a valid application name.

ARS6028E  Application 'appl_name' was not found in application group 'applgrp_name'.

Explanation: The specified application was not found in the specified application group.

User Response: Verify the names of the application and the application group. Verify that the application belongs to the application group. Then resubmit the command.

ARS6029E  The syntax for the value of flag -n 'value' is not valid. Valid syntax is 'dbfield=value'.

Explanation: The value that was specified with the -n parameter did not have the correct syntax.

User Response: Change the value of the -n parameter to the format 'dbfield=value' and then resubmit the command.

ARS6030E  The -o flag and the -S flag cannot be used together.

Explanation: A segment date cannot be specified if a data file name is specified.

User Response: Resubmit the command with either the -o parameter or the -S parameter.
The -i flag or the -q flag cannot be specified when the -o flag is used.

**Explanation:** An SQL query or a named query cannot be specified if a data file name is specified.

**User Response:** Resubmit the command without the -i and -q parameters.

---

At least one field=value pair must be provided to continue the operation.

**Explanation:** A request was made to add or update a document but the field values for the document were not specified.

**User Response:** Resubmit the command with at least one field=value pair.

---

An SQL query string (-i "WHERE database_name = value") must be provided to continue the operation.

**Explanation:** An SQL query string was not provided.

**User Response:** Resubmit the command with a valid SQL query string.

---

No hits were found that matched search criteria.

**Explanation:** No hits matched the search criteria.

**User Response:** Verify that this is the expected result. Otherwise, resubmit the command with different search criteria.

---

The named query 'named_query', does not exist in folder 'folder_name'.

**Explanation:** The specified named query was not found in the specified folder.

**User Response:** Verify that the named query exists in the folder, that the named query is a Public named query, and that the user has authority to View the named queries for the folder. Then resubmit the command.

---

The -q flag and the -i flag cannot be used together.

**Explanation:** A named query and an SQL query string cannot be specified in the same command.

**User Response:** Resubmit the command with either the -q parameter or the -i parameter.

---

The -q flag and the -S flag cannot be used together.

**Explanation:** A segment date cannot be specified if a named query is specified.

**User Response:** Resubmit the command without the -S parameter.

---

The syntax for the value of flag -S 'segment_dates' is not valid. Valid syntax is segdate1,segdate2 or segdate1,segdate2,format.

**Explanation:** The value specified with the -S parameter is not valid.

**User Response:** Verify that the value is in the following format: segdate1,segdate2,format. Then resubmit the command.

---

The only options that can be specified with the -F option are -u, -p, -h, and -v.

**Explanation:** The -F parameter was specified and one or more other parameters that are not valid on the command line were also specified.

**User Response:** Resubmit the command without the parameters that are not valid on the command line.
ARS6040E  The only options that can be specified with the -F option are -u, -p, -h, -s, and -v.

Explanation:  The -F parameter was specified and one or more other parameters that are not valid on the command line were also specified.

User Response:  Resubmit the command without the parameters that are not valid on the command line.

ARS6041E  The -o flag must be specified when using the -d flag.

Explanation:  A directory name was provided without an output file name.

User Response:  Resubmit the command without the -d parameter or resubmit the command with the -d parameter and the -o parameter.

ARS6042E  The -H, -n, and -N flags cannot be used when requesting document handles or LoadIds.

Explanation:  When requesting document handles or LoadIds, the -H, -n, and -N parameters cannot be specified.

User Response:  Resubmit the command without the -H, -n, and -N parameters.

ARS6043E  The -L, -n, and -N flags cannot be used when requesting only database field names.

Explanation:  When requesting only the database field names, the -L, -n, and -N parameters cannot be specified.

User Response:  Resubmit the command without the -L, -n, and -N parameters.

ARS6044E  The output file name 'outfile_name' and the directory path 'dir_path' exceeds a maximum length of path_size.

Explanation:  The number of characters in the output file name and the directory exceeds the maximum allowable length.

User Response:  Change the file name or directory path so that the length of the file name does not exceed the maximum allowable length. Then resubmit the command.

ARS6045E  The output file name 'file_name' exceeds a maximum length of length.

Explanation:  The number of characters in the output file name exceeds the maximum allowable length.

User Response:  Change the file name so that the length of the file name does not exceed the maximum allowable length.

ARS6046E  A value has not been provided for field 'field_name'.

Explanation:  A value for the specified field is missing. By default, when adding a document, values must be provided for all fields.

User Response:  Resubmit the command with a value for the field or resubmit the command with the -O parameter to indicate that the field values are optional.

ARS6047E  Data is from application 'appl_name1', application group 'applgrp_name1' and must be from application 'appl_name2', application group 'applgrp_name2'.

Explanation:  A document is being added that points to an existing document. The document must be from the same application.

User Response:  Resubmit the command with a document from the same application and application group to which the document will be added.
ARS6048E  The name of the system printer is required to continue the operation.
Explanation: The system printer name was not specified.
User Response: Resubmit the command with the -P parameter and specify the name of the system printer.

ARS6049E  The -c flag must be specified when the -N flag is used.
Explanation: Documents must be concatenated into one file when the -N parameter is specified.
User Response: Resubmit the command with the -c parameter.

ARS6050E  The -o flag must be specified when either the -c or -g flag is specified.
Explanation: An output file name must be specified when the -c or -g parameters are specified.
User Response: Resubmit the command with the -o parameter.

ARS6051E  A data file name, an SQL query string, or a named query must be provided to continue the operation.
Explanation: The -o, -i, or -q parameter must be specified when adding a document.
User Response: Resubmit the command with the -o, -i, or -q parameter.

ARS6052E  The length of the delimiter is invalid. The delimiter can only be 1 character.
Explanation: The value that was specified for the delimiter contains more than one character.
User Response: Resubmit the command with a valid, one-character delimiter.

ARS6053E  The output filename format is invalid.
Syntax is as follows. (Parentheses are required.)
(ag_name1)(ag_name2)(ag_name3)
Explanation: The output file name is not in the correct format.
User Response: Resubmit the command with a valid output file name.

ARS6054E  The header format is invalid. Syntax is as follows (Parentheses are required):
(ag_name1)(ag_name2)(ag_name3)
Explanation: The header string is not in the correct format.
User Response: Resubmit the command with a valid header string.

ARS6055E  A maximum of 'max_hits' hits(s) were requested for this query. The number of matching hits found was 'num_hits'.
Explanation: The SQL query matched more items than the number requested.
User Response: Change the SQL query string to match fewer items or increase the maximum number of items that can be returned. Then resubmit the command.

ARS6056E  Unable to retrieve resource group for 'file_name'.
Explanation: The command failed when attempting to retrieve a resource group.
User Response: See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.
ARS6057E  ‘LoadId could not be found’
Explanation: The System Log was searched but the LoadId could not be found.
User Response: Resubmit the command with a valid LoadId.

ARS6058E  Invalid option ‘option’.
Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS6059W  The number of hits returned has been limited to the maximum number of hits defined in the folder.
Explanation: The folder has a limit on the number of items that can be returned and the query has exceeded the maximum limit.
User Response: Verify that this was the expected result. Otherwise, resubmit the command with different search criteria.

ARS6060I  Attempting login for userid ‘userid’ ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6061I  Querying for printers on server ‘server_name’ ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6062I  Searching for folder ‘folder_name’ ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6063I  Searching for documents in ‘folder_name’ ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6072I Writing database field names in file 'file_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6073I Retrieving document for userid 'userid' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6080I Login successful
Explanation: This message is for your information only.
User Response: No action is required.

ARS6081E Login unsuccessful
Explanation: The command failed when attempting to log on to the server.
User Response: See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6082I Query successful
Explanation: This message is for your information only.
User Response: No action is required.
ARS6083E  Query unsuccessful
Explanation:  The command failed when attempting to query the database.
User Response:  See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6084I  Search successful
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6085E  Search unsuccessful
Explanation:  The command failed when attempting to query the database.
User Response:  See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6086I  Add successful
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6087E  Add unsuccessful
Explanation:  The command failed when attempting to add a document.
User Response:  See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6088I  Update successful
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6089E  Update unsuccessful
Explanation:  The command failed when attempting to update a document.
User Response:  See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6090I  Delete successful
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6091E  Delete unsuccessful
Explanation:  The command failed when attempting to delete a document.
User Response:  See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.
ARS6092I  Write successful
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6093E  Write unsuccessful
Explanation:  The command failed when attempting to write a document.
User Response:  See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6094I  Document successfully retrieved.
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6095I  Document successfully retrieved and stored in file 'file_name'
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6096E  Retrieve unsuccessful
Explanation:  The command failed when attempting to retrieve a document.
User Response:  See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6097I  Print request successful
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6098E  Print request unsuccessful
Explanation:  The command failed when attempting to print a document.
User Response:  See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6099E  The folder field value of 'field_value' is not valid for field 'field_name'.
Explanation:  The specified value is not valid for the specified folder field.
User Response:  Resubmit the command with a value that is valid for the folder field.

ARS6100E  The -f, -i, -q, -x, or -S flag cannot be used with the -X flag.
Explanation:  An incorrect parameter was specified.
User Response:  Resubmit the command without the -f, -i, -q, -x, or -S parameters.

ARS6101E  Application group 'applgrp_name' was not found on server 'server_name'.
Explanation:  The specified application group could not be found on the specified server.
User Response:  Verify the name of the application group and the name of the server. Verify that the application group exists on the server. Verify that the user has permission to access the application group. Then resubmit the command.
ARS6102E  Unable to restore hit from record ‘rec_number’ in file ‘file_name’.
Explanation: The record contains missing information or incorrect values and cannot be processed.
User Response: Resubmit the command with a valid record.

ARS6103E  Object Retrieval of index file failed using command ‘command’.
Explanation: The command failed when attempting to retrieve an index file.
User Response: See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6104E  Decompressing index file failed using command ‘command’.
Explanation: The command failed when attempting to uncompress an index file.
User Response: See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6105E  Converting index file to client code page failed using command ‘command’.
Explanation: The command failed when attempting to convert an index file to the code page of the instance of OnDemand on which the command was processed.
User Response: See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6107I  hits_queried document(s) have been queried. Retrieving hits_retrieved document(s).
Explanation: This message is for your information only.
User Response: No action is required.

ARS6108I  Starting arsdoc. Version: version
Explanation: This message is for your information only.
User Response: No action is required.
ARS6500I  Usage: arsdadm user -h hostname [-u <userid>] [-p <passwd>] [-v]
   [-F <parmfile>] [-a <action>] [-d <desc>] [-e <expire_date>]
   [-f <format>] [-g <[+]group1>] -i <userid> [-s <time_out>]
   [-t <type>] [-w <passwd>] [-A <account>] [-B <bldg>]

   -1 <addr1> Address line 1
   -2 <addr2> Address line 2
   -3 <addr3> Address line 3
   -4 <addr4> Address line 4

   Flags in a parameter file must be delimited by brackets EX: [-i userid]

   Explanation:  An incorrect parameter was specified for the command.

   User Response:  Resubmit the command with the correct parameters. For more information about this command,
   please see the OnDemand administration guide.
ARS6501I • ARS6503E

ARS6501I  Usage: arsadm group -h hostname [-u <userid>] [-p <passwd>] [-v]
              (-F <parmfile> | ([-a <action>] [-d <desc>] [-g <groupname>]
              [-i <[+-]userl>] [-o <owner>] [-G <gid>]])
        Version: version
              -a <action>
                a Add group
                d Delete group
                u Update group
              -d <desc> Description
              -g <groupname> New or existing group name
              -h <hostname> OnDemand Hostname (command line only)
              -i <[+-]userid> list of userids separated by spaces
                + add user to group
                - remove user from group on update
              -o <owner> Userid or Group name that owns the group
              -p <passwd> OnDemand User Login Password (command line only)
              -u <userid> OnDemand User Login Name (command line only)
              -v Verbose (command line only)
              -F <parmfile> Requests parameter file (command line only)
              -G <gid> GID

Flags in a parameter file must be delimited by brackets EX: [-g groupname]

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS6502I  Usage: arsadm printer -h hostname [-u <userid>] [-p <passwd>] [-v]
              (-F <parmfile> | ([-a <action>] [-d <desc>] [-n <printername>]
              -q <queue> [-t <type>]])
        Version: version
              -a <action>
                a Add printer
                d Delete printer
                u Update printer
              -d <desc> Description
              -h <hostname> OnDemand Hostname (command line only)
              -n <printername> New or existing printer name
              -p <passwd> OnDemand User Login Password (command line only)
              -q <queue> Name of PSF printer queue
              -t <type>
                p Printer
                f Fax
                i Printer with information
              -u <userid> OnDemand User Login Name (command line only)
              -v Verbose (command line only)
              -F <parmfile> Requests parameter file (command line only)

Flags in a parameter file must be delimited by brackets EX: [-n printername]

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS6503E  The server failed while attempting to get user information.

Explanation: The command failed when attempting to get user information from the server.

User Response: See the other messages that the command generated and see messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.
ARS6504E  The server failed while attempting to get group information.
Explanation:  The command failed when attempting to get group information from the server.
User Response:  See the other messages that the command generated and see messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6505E  The server failed while attempting to get printer information.
Explanation:  The command failed when attempting to get printer information from the server.
User Response:  See the other messages that the command generated and see messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6507I  arsadm completed.
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6508E  UID must be a valid number less than or equal to 80000.
Explanation:  The value that was specified for the UID is not a valid value.
User Response:  Resubmit the command with a valid UID value.

ARS6509E  GID must be a valid number greater than 80000.
Explanation:  The value that was specified for the GID is not a valid value.
User Response:  Resubmit the command with a valid GID value.

ARS6510E  The userid must be provided to continue the operation.
Explanation:  The userid was not specified.
User Response:  Resubmit the command with a valid userid.

ARS6511E  The group name must be provided to continue the operation.
Explanation:  The group name was not specified.
User Response:  Resubmit the command with a valid group name.

ARS6512E  The queue name must be provided to continue the operation.
Explanation:  The queue name was not specified.
User Response:  Resubmit the command with a valid queue name.

ARS6513E  The queue name cannot be removed when updating a printer.
Explanation:  The queue name is a required field and cannot be blank.
User Response:  Resubmit the command with a valid queue name.

ARS6514E  The printer name must be provided to continue the operation.
Explanation:  The printer name was not specified.
User Response:  Resubmit the command with a valid printer name.
ARS6515E  The UID cannot be specified when updating a user.
Explanation:  The UID value cannot be changed for an existing user.
User Response:  Resubmit the command without the UID value.

ARS6516E  The GID cannot be specified when updating a group.
Explanation:  The GID value cannot be changed for an existing group.
User Response:  Resubmit the command without the GID value.

ARS6517E  When deleting a user only the -i flag or the -e and -f flags can be specified.
Explanation:  Conflicting or incorrect parameters were specified.
User Response:  Resubmit the command with the correct parameters.

ARS6518E  Flags that provide group information cannot be specified when deleting a group (Ex. -d desc).
Explanation:  Conflicting or incorrect parameters were specified.
User Response:  Resubmit the command with the correct flags.

ARS6519E  Flags that provide printer information cannot be specified when deleting a printer (Ex. -d desc).
Explanation:  Conflicting or incorrect parameters were specified.
User Response:  Resubmit the command with the correct parameters.

ARS6520E  Printer 'printer_name' was not found.
Explanation:  The specified printer could not be found on the server.
User Response:  Verify the name of the printer and that the printer exists on the server. Then resubmit the command.

ARS6521E  Group 'group_name' was not found.
Explanation:  The specified group could not be found on the server.
User Response:  Verify the name of the group and that the group exists on the server. Then resubmit the command.

ARS6522E  User 'userid' was not found.
Explanation:  The specified user could not be found on the server.
User Response:  Verify the name of the user and that the user exists on the server. Then resubmit the command.

ARS6523E  User cannot be removed from group 'group' when performing an add operation.
Explanation:  The specified group was preceded by a dash (-) character, which indicates that the user should be removed from the group. However, a user cannot be removed from a group during an add operation.
User Response:  Resubmit the command without the dash character in front of the group or resubmit the command without the group.

ARS6524E  Userid 'userid' does not exist.
Explanation:  The specified userid could not be found on the server.
User Response:  Verify the userid and verify that the userid exists on the server. Then resubmit the command.
ARS6525E  Group name ‘group_name’ does not exist.
Explanation:  The specified group name could not be found on the server.
User Response:  Verify the name of the group and that the group exists on the server. Then resubmit the command.

ARS6528E  User ‘userid’ cannot be added. Either the userid or UID already exists.
Explanation:  The specified userid or the UID already exists in the database.
User Response:  Resubmit the command with a different userid or UID value.

ARS6529E  Group name ‘group_name’ cannot be added. Either the group name or GID already exists.
Explanation:  The specified group name or the GID already exists in the database.
User Response:  Resubmit the command with a different group name or GID value.

ARS6530E  Printer name ‘printer_name’ cannot be added. The printer name already exists.
Explanation:  The specified printer name already exists in the database.
User Response:  Resubmit the command with a different printer name.

ARS6531E  The ‘flag’ flag has a value that exceeds the maximum length of ‘length’.
Explanation:  The value that was provided for the specified parameter exceeds the maximum length allowed.
User Response:  Resubmit the command with a valid value for the parameter.

ARS6532E  User ‘userid’ already exists in group ‘group_name’.
Explanation:  The specified user has already been added to the specified group.
User Response:  Verify the userid and verify the name of the group. Then resubmit the command.

ARS6533E  User ‘userid’ has already been removed from group ‘group_name’.
Explanation:  The specified user has already been removed from the specified group.
User Response:  Verify the userid and the name of the group. Then resubmit the command.

ARS6534E  ‘name’ was found more than one time in the list.
Explanation:  The specified name was included in the list more than once.
User Response:  Remove the duplicate name from the list and then resubmit the command.

ARS6535E  The first available UID could not be determined from the server.
Explanation:  Unexpected error occurred.
User Response:  Contact your IBM Service Representative.

ARS6536E  The first available GID could not be determined from the server.
Explanation:  Unexpected error occurred during processing of this command.
User Response:  Contact your IBM Service Representative.
The inactivity time out value must be -1 (never time out), 0 (use system value), or in the range 1 - 1440.

**Explanation:** The value that was specified for the Inactivity Time Out value is not valid.

**User Response:** Resubmit the command with a valid Inactivity Time Out value. To find out more about the Inactivity Time Out value, start the administrative client, log on to a server, and open the System Parameters dialog box for the server. See the online help for the System Parameters dialog box for more information.

**User Response:** No action is required.
ARS6547I  Updating group 'group_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6548I  Adding printer 'printer_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6549I  Deleting printer 'printer_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6550I  Updating printer 'printer_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6551E  The group 'group_name' cannot be used as the group owner.
Explanation: The owner of the group cannot be the group itself.
User Response: Resubmit the command with a different group name for the group owner.

ARS6552E  The date value of 'date_value' using format 'format' cannot be converted to an internal date value.
Explanation: The specified date value could not be converted to an internal date value.
User Response: Resubmit the command with a valid date value using the specified format.

ARS6553E  The -e and -f flags can only be used when deleting a user.
Explanation: The -e or -f parameters were specified and the requested operation was not Delete.
User Response: Resubmit the command without the -e and -f parameters.

ARS6554E  The report generation flags -O and -S cannot be used with flags that are used for add/update/delete functions.
Explanation: The -O and -S parameters can be specified only to generate a report.
User Response: Resubmit the command without the -O and -S parameters.

ARS6594I  Report has been written to file 'file_name'
Explanation: This message is for your information only.
User Response: No action is required.

ARS6617I  Querying for application groups on server 'server' ...
Explanation: This message is for your information only.
User Response: No action is required.
ARS6635I Querying for folders on server 'server' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6653I Flags that are used to perform add/update/delete functions cannot be specified when requesting a report.
Explanation: When requesting a report, only the directory, file name, and name can be specified.
User Response: Resubmit the command with the correct parameters.

ARS6661E The output file name must be specified if a directory path is specified.
Explanation: The directory path was specified without an output file name.
User Response: Resubmit the command with a valid path and output file name.

ARS6662E The name must be provided to continue the operation.
Explanation: The name was not provided.
User Response: Resubmit the command with a valid name.
ARS6663I Usage: arsadm set -h hostname [-u <userid>] [-p <passwd>] [-v]
     [-F <parmfile>] | ([-a <action>] -n <setname> [-d <desc>]
     [-t <type>] -H <objserver> | [-N <nodename>] [-D <desc>]
     [-i <logon>] [-w <passwd>] [-l <nodename> | [-T <nodetype>]
     [-c <value>] [-A nodeaction])

     Version:  version

         a Add storage set
         d Delete storage set
         u Update storage set
     -c <value>
         y Cache only
         n Non-cache only
     -d <desc> Description of storage set
     -h <hostname> OnDemand Hostname (command line only)
     -i <logon> Storage manager logon name
     -l <nodename> Identifier for the storage node

     Storage Node
     High Level Qualifier (VSAM) OD/390 Object Server
     Collection Name (OAM) OD/390 Object Server
     -n <setname> Storage set name
     -p <passwd> OnDemand User Login Password (command line only)
     -t <loadtype> Storage Set load type
         f Fixed
         l Local
     -u <userid> OnDemand User Login Name (command line only)
     -v Verbose
     -w <passwd> Storage manager logon password
     -A <nodeaction>
         a Add storage node
         d Delete storage node
         u Update storage node
     -D <desc> Description of storage node
     -F <parmfile> Requests parameter file (command line only)
     -H <objserver> Object Server name for storage node
     -N <nodename> Storage node Name
     -T <nodetype> Storage Node type
         n Non-OD/390 Object Server
         o OD/390 Object Server using the OAM Access Method
         v OD/390 Object Server using the VSAM Access Method

     Flags in a parameter file must be delimited by brackets EX: [-n setname]

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS6664E 'name' was not found or does not exist on the server.

Explanation: The specified object was not found on the server.

User Response: Verify that the object exists on the server and that the user has the authority to access the object. Then resubmit the command.
ARS6692I Usage: arsadm appl -h hostname [-u <userid>] [-p <passwd>] [-v] 
   {-F <parmfile> | [{-a <action>] -n <applname> [-O <filename>] 
   [{-S <dir>}]}}
   Version:  version
   -a <action> Generate a report for the application
   -h <hostname> OnDemand Hostname (command line only)
   -n <applname> Existing application name
   -p <passwd> OnDemand User Login Password (command line only)
   -u <userid> OnDemand User Login Name (command line only)
   -v Verbose (command line only)
   -F <parmfile> Requests parameter file (command line only)
   -O <filename> Report file name
   -S <dir> Directory to store report

   Flags in a parameter file must be delimited by brackets EX: [-n applname]

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS6693I Usage: arsadm applgrp -h hostname [-u <userid>] [-p <passwd>] [-v] 
   {-F <parmfile> | [{-a <action>] -n <applgrpname> [-O <filename>] 
   [{-S <dir>}]}}
   Version:  version
   -a <action> Generate a report for the application group
   -h <hostname> OnDemand Hostname (command line only)
   -n <applgrpname> Existing application group name
   -p <passwd> OnDemand User Login Password (command line only)
   -u <userid> OnDemand User Login Name (command line only)
   -v Verbose (command line only)
   -F <parmfile> Requests parameter file (command line only)
   -O <filename> Report file name
   -S <dir> Directory to store report

   Flags in a parameter file must be delimited by brackets EX: [-n applgrpname]

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS6694I Usage: arsadm folder -h hostname [-u <userid>] [-p <passwd>] [-v] 
   {-F <parmfile> | [{-a <action>] -n <foldername> [-O <filename>] 
   [{-S <dir>}]}}
   Version:  version
   -a <action> Generate a report for the folder
   -h <hostname> OnDemand Hostname (command line only)
   -n <foldername> Existing folder name
   -p <passwd> OnDemand User Login Password (command line only)
   -u <userid> OnDemand User Login Name (command line only)
   -v Verbose (command line only)
   -F <parmfile> Requests parameter file (command line only)
   -O <filename> Report file name
   -S <dir> Directory to store report

   Flags in a parameter file must be delimited by brackets EX: [-n foldername]

Explanation: An incorrect parameter was specified for the command.
User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.
ARS6700I Usage: arsexprt -h hostname [\-u <userid>] [\-p <passwd>] [\-v]
(F <parmfile> | ([\-c] [\-e <user_group_list>] [\-i <import_userid>]
-s <import_srvr> -t <type> -w <import_passwd> -N <name>))

Version: version
\-c Ignore warnings
\-e <user_group_list> List of users and groups to exclude permissions
(e.g. \-e \"user1 +group1 user2 +group2\")
(group names must be preceded by the plus sign)
\-h <hostname> OnDemand Hostname (command line only)
\-i <import_userid> Import server login userid
\-p <passwd> OnDemand User Login Password (command line only)
\-s <import_srvr> Server where object will be added
\-t <type>
  u User
  g Group
  a Application group
  s Storage set
  f Folder
  p Printer
\-u <userid> OnDemand User Login Name (command line only)
\-w <import_passwd> Import server login passwd
\-v Verbose (command line only)
\-F <parmfile> Requests parameter file (command line only)
\-N <name> Name of object to export

Flags in a parameter file must be delimited by brackets EX: [-u userid]

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS6703E The name of the exported item must be provided to continue the operation.

Explanation: The name is missing from the request.

User Response: Resubmit the command with the name of the item to be exported.

ARS6708I arsexprt completed.

Explanation: This message is for your information only.

User Response: No action is required.

ARS6712E The only options that can be specified with the -F option are -u, -p, -h, -c, -v, -i, -s, and -w.

Explanation: One or more parameters that are not valid with the -F parameter were specified.

User Response: Resubmit the command with the correct parameters.

ARS6815E 'name' was not found on the 'server_name' server.

Explanation: The specified name could not be found on the specified server.

User Response: Verify that the object exists on the server and that the user has the authority to access the object. Then resubmit the command.

ARS6815E The import userid must be provided to continue the operation.

Explanation: The userid for the target server was not specified.

User Response: Resubmit the command with a userid for the target server.
ARS6816E  The import password must be provided to continue the operation.
Explanation: The password for the target server was not specified.
User Response: Resubmit the command with a password for the target server.

ARS6817E  The import host name must be provided to continue the operation.
Explanation: The host name of the target server was not specified.
User Response: Resubmit the command with the host name of the target server.

ARS6819E  The export type must be provided to continue the operation.
Explanation: The type of export to perform was not specified.
User Response: Resubmit the command with the type of export to perform.

ARS6822I  Attempting login for userid 'userid' on server 'server_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6825I  Processing object ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6826I  Querying for users on server 'server_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6827E  A user or group with id 'id' could not be found on server 'server_name'.
Explanation: The UID of the userid or the GID of the group could not be found on the specified server.
User Response: Verify the userid or the name of the group and the name of the server. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS6828I  Querying for groups on server 'server_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6829I  Querying for storage sets on server 'server_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS6830E  'name' already exists on server 'server_name'.
Explanation: The specified object already exists on the specified server.
User Response: Resubmit the command with a different object name.
ARS6831E  The server failed while adding a storage set.
Explanation:  The command failed when attempting to add a storage set.
User Response:  See the other messages that were generated by the command and see messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6832E  The server failed while adding a storage node to a storage set.
Explanation:  The command failed when attempting to add a storage node to a storage set.
User Response:  See the other messages that were generated by the command and see messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6833E  The server host names must be different to continue the operation.
Explanation:  The source server name and the target server name are the same.
User Response:  Resubmit the command and specify a name for the source server that is different than the name of the target server.

ARS6834E  Unable to identify the name of the default printer.
Explanation:  The name of the default printer cannot be determined.
User Response:  Verify that the user has access to the printer so that the printer name can be determined. Then resubmit the command.

ARS6835E  The application group 'applgrp_name' does not exist or the user does not have permission to access the application group.
Explanation:  The specified application group could not be found on the server or the user does not have permission to access the application group.
User Response:  Verify the name of the application group and that the application group exists on the server. Verify that the user has permission to access the application group. Then resubmit the command.

ARS6836I  Querying for application group 'applgrp_name' on server 'server_name' ...
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS6837E  A storage set with id 'sid' could not be found on server 'server_name'.
Explanation:  The command failed because a storage set could not be found on the specified server.
User Response:  Verify the name and ID of the storage set and the name of the server. Resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS6838E  A printer with id 'pid' could not be found on server 'server_name'.
Explanation:  The command failed because a printer could not be found on the specified server.
User Response:  Verify the name and ID of the printer and the name of the server. Resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS6839I  Querying for folder 'folder_name' on server 'server_name' ...
Explanation:  This message is for your information only.
User Response:  No action is required.
ARS6840E  The folder 'folder_name' does not exist or the user does not have permission to access the folder.
Explanation:  The command failed because the specified folder could not be found on the server.
User Response:  Verify the name of the folder and that the folder exists on the server. Verify that the user has permission to access the folder. Then resubmit the command. If the problem persists, contact your IBM Service Representative.

ARS6841E  The server failed while deleting a storage set.
Explanation:  The server operation failed when attempting to delete a storage set.
User Response:  See the other messages that were generated by the command and see messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6842E  The server failed while updating a storage set.
Explanation:  The server operation failed when attempting to update a storage set.
User Response:  See the other messages that were generated by the command and see messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6843E  The server failed while deleting a storage node from a storage set.
Explanation:  The server operation failed when attempting to delete a node from a storage set.
User Response:  See the other messages that were generated by the command and see messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.

ARS6844E  The server failed while updating a storage node in a storage set.
Explanation:  The server operation failed when attempting to update a storage node.
User Response:  See the other messages that were generated by the command and see messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.
ARS7000I  Usage: arsmdmgr -h hostname [\-u <userid>] [\-p <passwd>] [\-v]
[\-c <out_dir>] [\-d <in_dir>] [\-e <delim>] [\-f <foldername>]
[\-l] [\-m <min_nbr>] [\-n <nbr_drives>] [\-t <seconds>] [\-F <ext>]
[\-T <max_wait_time>] [\-r] [\-H] [\-I]

Version: version

-\c <out_dir> Output directory
-\d <in_dir> Input directory
-\e <delim> Character separator between index values
-\f <foldername> OnDemand folder
-\h <hostname> OnDemand Hostname
-\l Write messages to log file
-\m <min_nbr> Minimum # of entries present before retrieval begins
-\n <nbr_drives> Maximum # of drives per OnDemand Object server
-\p <passwd> OnDemand User Login Password
-\r Perform reconciliation processing
-\t <seconds> # of seconds to wait before looking for requests
-\u <userid> OnDemand User Login Name
-\v Verbose
-\F <ext> File extension of the input parameter files
-\H Request file is in hit list format
-\l Write hits to a file
-\R <name> Request file name
-\T <max_wait_time> # of seconds to wait before processing a request

Explanation: An incorrect parameter was specified for the command.

User Response: Resubmit the command with the correct parameters. For more information about this command, please see the OnDemand administration guide.

ARS7001I arsmdmgr completed.

Explanation: This message is for your information only.

User Response: No action is required.

ARS7002E The input directory must be provided to continue the operation.

Explanation: The input directory was not specified.

User Response: Resubmit the command with a valid input directory.

ARS7003E The directory 'dirpath' does not exist or cannot be accessed.

Explanation: The specified directory could not be found or accessed.

User Response: Verify that the directory exists and that the user has access to the directory. Then resubmit the command.

ARS7004E The minimum number of requests to process must be provided to continue the operation.

Explanation: The minimum number of requests to process was not specified.

User Response: Resubmit the command with the minimum number of requests to process.

ARS7005E The maximum amount of time to wait to process a request must be provided to continue the operation.

Explanation: The maximum amount of time to wait was not specified.

User Response: Resubmit the command with the maximum amount of time to wait.
ARS7006E  The folder field value of 'field_value' is not valid for field 'field_name' in request 'request_identifier'.  
Explanation:  The specified value is not valid for the specified field.  
User Response:  Resubmit the command with a valid value for the field.  

ARS7008E  The file doesn't contain any records.  
Explanation:  The request file does not contain any records.  
User Response:  Resubmit the command with a file that contains request records.  

ARS7009E  Unable to submit requests with command 'command'.  
Explanation:  The specified command failed.  
User Response:  Verify that the environment variable is set correctly and that the command exists on the system.  Then resubmit the command.  

ARS7010I  The -d, -F, -I, -n, -m, -r, -t, and -T flags are being ignored in this session.  
Explanation:  This message is for your information only.  
User Response:  No action is required.  

ARS7011I  Logging off the server.  
Explanation:  This message is for your information only.  
User Response:  No action is required.  

ARS7012I  File 'file_name' renamed to 'file_name_new'.  
Explanation:  This message is for your information only.  
User Response:  No action is required.  

ARS7013I  Building hit list for 'folder_name' ...  
Explanation:  This message is for your information only.  
User Response:  No action is required.  

ARS7014I  Hit list successful  
Explanation:  This message is for your information only.  
User Response:  No action is required.  

ARS7015E  Hit list unsuccessful  
Explanation:  The command failed when attempting to generate the document list.  
User Response:  See the other messages that were generated by the command and see additional messages in the OnDemand System Log for more information. If the problem persists, contact your IBM Service Representative.  

ARS7016E  The -r flag and the -H flag cannot be used together.  
Explanation:  Reconciliation processing cannot be performed when the request file is in hit list format.  
User Response:  Resubmit the command with either the -r parameter or the -H parameter.
ARS7505I  Adding storage set 'set_name' ...
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS7506I  Deleting storage set 'set_name' ...
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS7507I  Updating storage set 'set_name' ...
Explanation:  This message is for your information only.
User Response:  No action is required.

ARS7508E  Storage Set 'set_name' cannot be added. The storage set already exists.
Explanation:  A storage set with the name specified already exists on the server.
User Response:  Resubmit the command with a different storage set name.

ARS7509E  Flags that provide set or node information cannot be specified when deleting a set (Ex. -d desc).
Explanation:  A parameter was specified that is not valid with a delete operation.
User Response:  Resubmit the command without the parameter.

ARS7510E  Flags that provide storage node information cannot be specified when updating a set (Ex. -N nodename).
Explanation:  A parameter was specified that is not valid with an update operation.
User Response:  Resubmit the command without the parameter.

ARS7511E  Flags that provide userid and password information cannot be specified when the storage node is cache only, located on an OD/390 object server, or OS/400 server.
Explanation:  A parameter was specified that is not valid for the type or location of the storage node.
User Response:  Resubmit the command without the parameter.

ARS7512E  Flags that provide userid and password information must be specified when the storage node is not cache only.
Explanation:  The userid and password were not specified.
User Response:  Resubmit the command with a valid userid and password.

ARS7513E  The storage node name is required. Enter a valid storage node name.
Explanation:  The storage node name was not specified.
User Response:  Resubmit the command with a valid storage node name.

ARS7514E  Unable to delete the storage set. The storage set contains application groups.
Explanation:  The command failed when attempting to delete the storage set because one or more application groups are assigned to the storage set. A storage set cannot be deleted if one or more application groups are assigned to the storage set.
User Response:  Delete the application groups that are assigned to the storage set and then resubmit the command to delete the storage set.
ARS7515E  The description, load type, or node information must be specified when updating a storage set.
Explanation: Information that is required to update a storage set was not specified.
User Response: Resubmit the command with the description, load type, and node information.

ARS7516E  The Load Type cannot be change to Local. One primary node on each server must be identified as the node where data will be loaded.
Explanation: A request was made to change the Load Type to Local. However, a primary node does not exist on each server to which data will be loaded.
User Response: Set the Load Data option on one primary node on each server to which data will be loaded.

ARS7517E  The Load Type cannot be change to Fixed. More than one node has been identified as the node where data will be loaded.
Explanation: A request was made to change the Load Type to Fixed. However, more than one node is identified as the node to which data will be loaded.
User Response: Set the Load Data option on one and only one storage node in the storage set.

ARS7518E  When deleting a storage node, only the set name, node name, and new load node name can be provided.
Explanation: A parameter was specified that is not valid with a delete operation.
User Response: Resubmit the command with only the set name, node name, or new load node name.

ARS7519E  A storage node cannot be deleted or updated when a storage set is added.
Explanation: A request was made to add a storage set and update or delete a storage node during the same operation.
User Response: Resubmit the command without the update or delete parameters.

ARS7520E  Storage node 'node_name' cannot be added. It already exists in the storage set.
Explanation: The specified storage node already exists in the storage set.
User Response: Resubmit the command with a different storage node name.

ARS7521E  Storage node 'node_name' cannot be updated or deleted. It does not exist in the storage set.
Explanation: The specified storage node name does not exist in the storage set.
User Response: Resubmit the command with a different storage node name.

ARS7522E  The storage node 'node_name' cannot be deleted. It is the only storage node in the storage set.
Explanation: A request was made to delete the only storage node in the storage set. A storage set must contain at least one storage node.
User Response: Submit a different command.

ARS7523E  The Load Type cannot be changed when a storage node is being updated, deleted, or added.
Explanation: A request was made to change the Load Type when updating, deleting, or adding a storage node.
User Response: Submit a separate command to change the Load Type.
ARS7524E  When adding a node, the load data flag can only be set for the node being added.
Explanation: The Load Data parameter was specified for a storage node other than the storage node that was being added.
User Response: Resubmit the command and set the Load Data parameter for the storage node that is being added.

ARS7525E  Node information must be specified when updating a storage node.
Explanation: Information that is required to update a storage node was not specified.
User Response: Resubmit the command with the required storage node information.

ARS7526E  One primary node on each server must be identified as the node where data will be loaded.
Explanation: For one or more servers, the primary node to which data will be loaded was not specified.
User Response: For each server, set the Load Data option on the primary node to which data will be loaded.

ARS7527E  More than one primary node on server 'server_name' has been identified as the node where data will be loaded.
Explanation: More than one primary node on a server has been identified as the node to which data will be loaded.
User Response: Set the Load Data option on one and only one primary node on each server.

ARS7528E  More than one node has been identified as the node where data will be loaded.
Explanation: When the Load Type is fixed, only one storage node can be identified as the node to which data will be loaded.
User Response: Set the Load Data option on one and only one storage node in the storage set.

ARS7529E  The storage node password must be at least one non-blank character.
Explanation: The password was blank.
User Response: Resubmit the command with a valid storage node password.

ARS7530E  The storage node host name cannot be all blank characters.
Explanation: The host name contains all blank characters.
User Response: Resubmit the command with a valid host name.

ARS7531I  Adding node 'node_name' in storage set 'set_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS7532I  Deleting node 'node_name' in storage set 'set_name' ...
Explanation: This message is for your information only.
User Response: No action is required.

ARS7533I  Updating node 'node_name' in storage set 'set_name' ...
Explanation: This message is for your information only.
User Response: No action is required.
Part 2. OAM support services ABEND codes
Chapter 3. Introduction

ABEND Code U-0039 (X'0027') is issued by the OAM support services when a failure or error condition occurs for which normal program execution cannot continue.

An associated Reason Code (usually contained in general register 15 at the time of ABEND) further describes the condition. The Reason Code is an 8-digit hexadecimal value of the form \textit{mmmmrrrr} where:

- \textit{mmmm} (the high order 4-digits) is the Binary Coded Decimal representation of an associated message number. If these digits are 0000 then no message has been issued.
- \textit{rrrr} (the low order 4-digits) is a Reason Code which identifies the failure or error condition. The Reason Code descriptions that are listed beginning on page 139 correspond to the \textit{rrrr} digits.

Unless indicated otherwise, the following items apply to all Reason Codes:

**System Action:** The system may create LOGREC records and may also create an SVC dump.

**System Programmer Response:** Search problem reporting data bases for a fix for the problem. If no fix exists, please have the following diagnostic and problem determination materials available and contact the IBM Support Center:

- Binary machine readable dump data sets (for example, SVC dump and / or SYSMDUMP data sets). Please note that print image formatted dumps written to data sets referenced by the SYSUDUMP and SYSABEND DD statements are, in general, inadequate when performing problem determination.
- Formatted LOGREC records related to the failure. Refer to the \textit{Environmental Record Editing and Printing Program (EREP) User’s Guide}, GC35-0151 and the \textit{Environmental Record Editing and Printing Program (EREP) Reference}, GC35-0152 for information regarding the selection and formatting of LOGREC records.
- Relevant sections of the MVS™ System Log.
- All related Job Logs and JCL listings.
Chapter 4. Reason codes

The following Reason Codes are associated with ABEND Code U-0039 (X'0027') that is issued by the OAM support services when a failure or error condition occurs for which normal program execution cannot continue. See [Chapter 3, “Introduction”, on page 137] for general information about the Reason Codes, including the System Action and the System Programmer Response.

Reason Code: 0250
Description: Queueing services request error: An invalid combination of storage attributes has been specified on a Queue or Queue Element BUILD request.
Detecting Module: ARS3QMGR

Reason Code: 0251
Description: Queueing services request error: The caller is not executing in Task Mode and is not properly authorized.
Detecting Module: ARS3QMGR

Reason Code: 0252
Description: Queueing services error: An unexpected return code was received from the MVS Lock Manager when attempting to obtain a lock. At the time of ABEND registers are loaded as follows:

R0: Indicates which lock was being manipulated.
   1: LOCAL
   2: CMS

R14: Contains the Lock Manager (SETLOCK) return code.
Detecting Module: ARS3QMGR

Reason Code: 0253
Description: Queueing services error: An unexpected return code was received from the MVS Lock Manager when attempting to release a lock. At the time of ABEND registers are loaded as follows:

R0: Indicates which lock was being manipulated.
   1: LOCAL
   2: CMS

R14: Contains the Lock Manager (SETLOCK) return code.
Detecting Module: ARS3QMGR

Reason Code: 0254
Description: Queueing services error: A queue validity error has been detected. An element was expected to reside on a queue, however, it appears that the element is not properly queued.
Detecting Module: ARS3QMGR
Reason Code: 0255
Description: Queueing services error: A queue validity error has been detected. An element was found which was expected to not reside on a queue, however, its queue header pointer was non-zero.
Detecting Module: ARS3QMGR

Reason Code: 0256
Description: Queueing services error: The queue serialization level value within the queue header was invalid.
Detecting Module: ARS3QMGR

Reason Code: 0257
Description: Queueing services request error: An attempt was made to destroy an element which still resided on a queue.
Detecting Module: ARS3QMGR

Reason Code: 0258
Description: Queueing services request error: An attempt was made to destroy a queue header which described a non-empty queue.
Detecting Module: ARS3QMGR

Reason Code: 0259
Description: Queueing services request error: The service was invoked by an unauthorized caller via a mechanism other than the PC instruction.
Detecting Module: ARS3QMGR

Reason Code: 025A
Description: Queueing services request error: The caller is not executing in task mode and has not supplied a TCB pointer to be associated with VSM requests.
Detecting Module: ARS3QMGR

Reason Code: 025B
Description: Queueing services error: An unexpected return code was received from the TCBTOKEN service. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the TCBTOKEN plist.
R14: Contains the TCBTOKEN service return code.
Detecting Module: ARS3QMGR

Reason Code: 0270
Description: Initialization failure: One or more support modules could not be LOADed.
Detecting Module: ARS3OCT

Reason Code: 0271
Description: An unexpected return code was received from ATTACH. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the ATTACH plist.
R14: Contains the ATTACH service return code.
Detecting Module: ARS3OCT

Reason Code: 0272
Description: An unexpected return code was received from the MVS Lock Manager when attempting to obtain a lock. At the time of ABEND registers are loaded as follows:

R0: Indicates which lock was being manipulated.
   1: LOCAL
   2: CMS

R14: Contains the Lock Manager (SETLOCK) return code.

Detecting Module: ARS3OCT

Reason Code: 0273
Description: An unexpected return code was received from the MVS Lock Manager when attempting to release a lock. At the time of ABEND registers are loaded as follows:

R0: Indicates which lock was being manipulated.
   1: LOCAL
   2: CMS

R14: Contains the Lock Manager (SETLOCK) return code.

Detecting Module: ARS3OCT

Reason Code: 0274
Description: The End-of-Task Exit was entered for a TCB which did not have a corresponding element on the ARS3CAS_TCBQH subtask queue. At the time of ABEND registers are loaded as follows:

R0: Contains the address of the ARS3QMP structure.
R2: Contains the TCB pointer presented to the ETXR.
R14: Contains the ARS3QMGR service return code.

Detecting Module: ARS3OCT

Reason Code: 0275
Description: Initialization error: An unacceptable value has been specified for the number of ARS3OSR tasks to be ATTACHED. At the time of ABEND registers are loaded as follows:

R0: Contains the specified task count.

Additional Problem Determination Information: OAM services initialization parameters are contained in the ars.cfg file, which resides in the /usr/lpp/ars/config directory. The number of ARS3OSR tasks to be ATTACHED is specified as the operand of the ARS_NUM_OAMSRVR statement. The value specified must be non-negative and less than or equal to 30.

Detecting Module: ARS3OCT

Reason Code: 0276
Description: The attempt to establish an ESTAEX recovery environment was unsuccessful. At the time of ABEND registers are loaded as follows:

R0: Contains the ESTAEX reason code.
R14: Contains the ESTEAX reason code.

Detecting Module: ARS3OCT
Reason Code: 027A
Description: An unexpected return code was received from the ARS3QMGR service. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the ARS3QMP struct.
R14: Contains the ARS3QMGR service return code.
Detecting Module: ARS3OCT

Reason Code: 027B
Description: An unexpected return code was received from the TCBTOKEN service. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the TCBTOKEN plist.
R14: Contains the TCBTOKEN service return code.
Detecting Module: ARS3OCT

Reason Code: 027D
Description: An unexpected return code was received from an IEANT\textit{xx} service. At the time of ABEND registers are loaded as follows:
R0: Indicates which service was being requested.
   4: IEANTCR
   8: IEANTRT
   C: IEANTDL
R14: Contains the IEANT\textit{xx} return code.
Detecting Module: ARS3OCT

Reason Code: 027E
Description: A subtask did not terminate when requested to do so. The subtask is being forcibly terminated via CALLRTM.
Detecting Module: ARS3OCT

Reason Code: 027F
Description: During subsystem shutdown, not all subtasks could be terminated.
Detecting Module: ARS3OCT

Reason Code: 0292
Description: An unexpected return code was received from the MVS Lock Manager when attempting to obtain a lock. At the time of ABEND registers are loaded as follows:
R0: Indicates which lock was being manipulated.
   1: LOCAL
   2: CMS
R14: Contains the Lock Manager (SETLOCK) return code.
Detecting Module: ARS3OSR
Reason Code: 0293
Description: An unexpected return code was received from the MVS Lock Manager when attempting to release a lock. At the time of ABEND registers are loaded as follows:

R0: Indicates which lock was being manipulated.
   1: LOCAL
   2: CMS

R14: Contains the Lock Manager (SETLOCK) return code.

Detecting Module: ARS3OSR

Reason Code: 0296
Description: The attempt to establish an ESTAEX recovery environment was unsuccessful. At the time of ABEND registers are loaded as follows:

R0: Contains the ESTAEX reason code.

R14: Contains the ESTEAX reason code.

Detecting Module: ARS3OSR

Reason Code: 029A
Description: An unexpected return code was received from the ARS3QMGR service. At the time of ABEND registers are loaded as follows:

R0: Contains the address of the ARS3QMP structure.

R14: Contains the ARS3QMGR service return code.

Detecting Module: ARS3OSR

Reason Code: 029B
Description: An unexpected return code was received from the TCBTOKEN service. At the time of ABEND registers are loaded as follows:

R0: Contains the address of the TCBTOKEN plist.

R14: Contains the TCBTOKEN service return code.

Detecting Module: ARS3OSR

Reason Code: 037A
Description: An unexpected return code was received from the ARS3QMGR service. At the time of ABEND registers are loaded as follows:

R0: Contains the address of the ARS3QMP structure.

R14: Contains the ARS3QMGR service return code.

Detecting Module: ARS3ORI
Part 3. JES Spool data capture facility ABEND codes
Chapter 5. Introduction

ABEND Code U-0039 (X'0027') is issued when a failure or error condition occurs for which normal program execution cannot continue. An associated Reason Code (usually contained in general register 15 at the time of ABEND) further describes the condition.

The Reason Code is an eight-digit hexadecimal value of the form mmmmmrrrr where:

* mmmm (the high order four digits) is the Binary Coded Decimal representation of an associated message number. If these digits are 0000 then no message has been issued.

* rrrr (the low order four digits) is a Reason Code that identifies the failure or error condition. The Reason Code descriptions that are listed beginning on page 149 correspond to the rrrr digits.

Unless indicated otherwise, the following items apply to all Reason Codes:

**System Action:** The system may create LOGREC records and may also create an SVC dump.

**System Programmer Response:** Search problem reporting data bases for a fix for the problem. If no fix exists, collect the following diagnostic and problem determination information and then contact the IBM support center:

- Binary machine readable dump data sets (for example, SVC dump and SYSMDUMP data sets). Note that print image formatted dumps written to data sets referenced by the SYSUDUMP and SYSABEND DD statements are, in general, inadequate when performing problem determination.

- Formatted LOGREC records related to the failure. Refer to the Environmental Record Editing and Printing Program (EREP) User’s Guide, GC35-0151 and the Environmental Record Editing and Printing Program (EREP) Reference, GC35-0152 for information regarding the selection and formatting of LOGREC records.

- Relevant sections of the MVS System Log.

- All related Job Logs and JCL listings.
Chapter 6. Reason codes

The following Reason Codes are associated with ABEND Code U-0039 (X'0027') that is issued by the JES Spool Data Capture facility (ARSYSPIN) when a failure or error condition occurs for which normal program execution cannot continue. See Chapter 5, “Introduction”, on page 147 for general information about the Reason Codes, including the System Action and the System Programmer Response.

Reason Code: 0401
Description: The attempt to OPEN a DCB was not successful. At the time of ABEND registers are loaded as follows:

R0: Points to an area consisting of the DDNAME immediately followed by the DCB.
R14: Contains the OPEN Return Code.
Detecting Module: ARSYSPIN

Reason Code: 0402
Description: The attempt to create a capture Data Space was unsuccessful. At the time of ABEND registers are loaded as follows:

R0: Contains the DSPSERV Reason Code.
R2: Points to the DSPSERV interface plist.
R14: Contains the DSPSERV Return Code.
Detecting Module: ARSYSPIN

Reason Code: 0403
Description: The attempt to create an Access List Entry for the capture Data Space was unsuccessful. At the time of ABEND registers are loaded as follows:

R0: Contains the ALESERV Reason Code.
R2: Points to the ALESERV interface plist.
R14: Contains the ALESERV Return Code.
Detecting Module: ARSYSPIN

Reason Code: 0404
Description: The attempt to delete the capture Data Space was unsuccessful. At the time of ABEND registers are loaded as follows:

R0: Contains the DSPSERV Reason Code.
R2: Points to the DSPSERV interface plist.
R14: Contains the DSPSERV Return Code.
Detecting Module: ARSYSPIN

Reason Code: 0405
Description: The attempt to delete the Access List Entry for the capture Data Space was unsuccessful. At the time of ABEND registers are loaded as follows:

R0: Contains the ALESERV Reason Code.

© Copyright IBM Corp. 2001, 2003
R2: Points to the ALESERV interface plist.
R14: Contains the ALESERV Return Code.

Detecting Module: ARSYSPIN

Reason Code: 0470
Description: One or more support modules could not be LOADED.

Detecting Module: ARSYSPIN

Reason Code: 0471
Description: An unexpected return code was received from ATTACH. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the ATTACH plist.
R14: Contains the ATTACH service return code.

Detecting Module: ARSYSPIN

Reason Code: 0472
Description: An unexpected return code was received from the MVS Lock Manager when attempting to obtain a lock. At the time of ABEND registers are loaded as follows:
R0: Indicates which lock was being manipulated.
   1: LOCAL
   2: CMS
R14: Contains the Lock Manager return code.

Detecting Module: ARSYSPIN

Reason Code: 0473
Description: An unexpected return code was received from the MVS Lock Manager when attempting to release a lock. At the time of ABEND registers are loaded as follows:
R0: Indicates which lock was being manipulated.
   1: LOCAL
   2: CMS
R14: Contains the Lock Manager return code.

Detecting Module: ARSYSPIN

Reason Code: 0474
Description: The End-of-Task Exit was entered for a TCB which did not have a corresponding element on the ARS3QMP structure. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the ARS3QMP structure.
R2: Contains the TCB pointer presented to the ETXR.
R14: Contains the ARS3QMGR service return code.

Detecting Module: ARSYSPIN
Reason Code: 0476
Description: The attempt to establish an ESTAEX recovery environment was unsuccessful. At the time of ABEND registers are loaded as follows:
R0: Contains the ESTAEX Reason Code.
R14: Contains the ESTAEX Return code.
Detecting Module: ARSYSPIN

Reason Code: 047A
Description: An unexpected return code was received from the ARS3QMGR service. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the ARS3QMP structure.
R14: Contains the ARS3QMGR service return code.
Detecting Module: ARSYSPIN

Reason Code: 047B
Description: An unexpected return code was received from the TCBTOKEN service. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the TCBTOKEN plist.
R14: Contains the TCBTOKEN service return code.
Detecting Module: ARSYSPIN

Reason Code: 047D
Description: An unexpected return code was received from an IEANTxx service. At the time of ABEND registers are loaded as follows:
R0: Indicates which service was being requested:
   4: IEANTCR
   8: IEANTRT
   C: IEANTDL
R14: Contains the IEANTxx return code.
Detecting Module: ARSYSPIN

Reason Code: 047E
Description: A subtask did not terminate when requested to do so. The subtask is being forcibly terminated via CALLRTM.
Detecting Module: ARSYSPIN

Reason Code: 047F
Description: During subsystem shutdown, not all subtasks could be terminated.
Detecting Module: ARSYSPIN
Reason Code: 0490
Description:  A request has been made to interact with the JES3 subsystem, however, the current unit of work is not executing under the control of JES3.
Detecting Module:  ARSYSSI

Reason Code: 0491
Description:  An unexpected return code was received from the MVS Subsystem Request Router. At the time of ABEND registers are loaded as follows:
- R0:  Contains the IEFSSREQ return code.
- R14:  Contains the address of the ARSYCBSI structure.
Detecting Module:  ARSYSSI

Reason Code: 0492
Description:  An unexpected return code was received from the MVS Lock Manager when attempting to obtain a lock. At the time of ABEND registers are loaded as follows:
- R0:  Indicates which lock was being manipulated.
  1:  LOCAL
  2:  CMS
- R14:  Contains the Lock Manager return code.
Detecting Module:  ARSYSSI

Reason Code: 0493
Description:  An unexpected return code was received from the MVS Lock Manager when attempting to release a lock. At the time of ABEND registers are loaded as follows:
- R0:  Indicates which lock was being manipulated.
  1:  LOCAL
  2:  CMS
- R14:  Contains the Lock Manager return code.
Detecting Module:  ARSYSSI

Reason Code: 0494
Description:  An unexpected return code was received from JES in response to a SAPI request. At the time of ABEND registers are loaded as follows:
- R0:  Contains the SSOBRETN value.
- R14:  Contains the address of the ARSYCBSI structure.
Detecting Module:  ARSYSSI

Reason Code: 0496
Description:  The attempt to establish an ESTAEX recovery environment was unsuccessful. At the time of ABEND registers are loaded as follows:
- R0:  Contains the ESTAEX Reason Code.
- R14:  Contains the ESTAEX Return code.
Detecting Module:  ARSYSSI
Reason Code: 049A
Description: An unexpected return code was received from the ARS3QMGR service. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the ARS3QMP structure.
R14: Contains the ARS3QMGR service return code.
Detecting Module: ARSYSSI

Reason Code: 049B
Description: An unexpected return code was received from the TCBTOKEN service. At the time of ABEND registers are loaded as follows:
R0: Contains the address of the TCBTOKEN plist.
R14: Contains the TCBTOKEN service return code.
Detecting Module: ARSYSSI

Reason Code: 049C
Description: An unexpected return code was received from the DSPSERV service when attempting to release data space pages. At the time of ABEND registers are loaded as follows:
R0: Contains the DSPSERV Reason code.
R2: Contains the DSPSERV interface plist.
R14: Contains the DSPSERV Return code.
Detecting Module: ARSYSSI

Reason Code: 049D
Description: An unexpected return code was received from ATTACH. At the time of ABEND registers are loaded as follows:
R0: Contains the ATTACH plist.
R14: Contains the ATTACH service return code.
Detecting Module: ARSYSSI

Reason Code: 04A9
Description: A request to unallocate a transfer data set was unsuccessful. At the time of ABEND registers are loaded as follows:
R0: Contains the DYNALLOC request block S99RSC field.
R14: Contains the S99RB address.
Detecting Module: ARSYSSI

Reason Code: 04AA
Description: An attempt to OPEN a transfer file DCB was unsuccessful. At the time of ABEND registers are loaded as follows:
R14: Contains the DCB address.
Detecting Module: ARSYSSI
Reason Code: 04AB
Description: A request to DYNALLOC a transfer data set was unsuccessful. At the time of ABEND registers are loaded as follows:
- R0: Contains the DYNALLOC request block S99RSC field.
- R14: Contains the S99RB address.
Detecting Module: ARSYSSI

Reason Code: 04AC
Description: A request to unallocate a Spool file was unsuccessful. At the time of ABEND registers are loaded as follows:
- R0: Contains the DYNALLOC request block S99RSC field.
- R14: Contains the S99RB address.
Detecting Module: ARSYSSI

Reason Code: 04AD
Description: An attempt to CLOSE a Spool file ACB was unsuccessful. At the time of ABEND registers are loaded as follows:
- R14: Contains the ACB address.
Detecting Module: ARSYSSI

Reason Code: 04AE
Description: An attempt to OPEN a Spool file ACB was unsuccessful. At the time of ABEND registers are loaded as follows:
- R14: Contains the ACB address.
Detecting Module: ARSYSSI

Reason Code: 04AF
Description: A request to DYNALLOC a Spool file was unsuccessful. At the time of ABEND registers are loaded as follows:
- R0: Contains the DYNALLOC request block S99RSC field.
- R14: Contains the S99RB address.
Detecting Module: ARSYSSI
Chapter 7. Messages

The following messages are associated with the JES Spool Data Capture facility (ARYSPIN).

ARSY0100E Unable to open <filename> (errno: <integer> (x'hexdigits'))
Explanation: The attempt to OPEN the file identified by <filename> was unsuccessful. The C runtime errno value (shown in decimal and hexadecimal) is described in OS/390 C++ Run-Time Library Reference, SC28-1663.
The most likely cause of the failure is a missing DD statement.
Module: ARSYPXP

ARSY0101E fldata() failed for <filename> (RC: <integer> (x'hexdigits'))
Explanation: The attempt to retrieve descriptive information for the file identified by <filename> was unsuccessful. See OS/390 C++ Run-Time Library Reference, SC28-1663 for a description of the fldata() function return values.
Module: ARSYPXP

ARSY0102E Error on fread() of file <filename>
Explanation: An attempt to read a logical record from the file identified by <filename> was unsuccessful. This message is usually followed by a message beginning with EDC which further describes the error.
Module: ARSYPXP

ARSY0103I <<options statement text>>
Explanation: This message simply echoes the text of a given control statement.
Module: ARSYPXP

ARSY0104E Syntax error - keyword delimiter not found
Explanation: The equal sign delimiter which separates a keyword from its operand was not found on the current control statement. (That is, the statement identified by the most recent preceding ARSY0103I message.)
Module: ARSYPXP

ARSY0105E Unrecognized keyword: <string>
Explanation: The current control statement keyword (that is, the text to the left of the equal sign) is not valid.
Module: ARSYPXP

ARSY0106E Keyword operand not supplied
Explanation: No text was found following the keyword delimiter on the current control statement.
Module: ARSYPXP

ARSY0107E Operand rightside delimiter not found
Explanation: The operand for the current control statement did not contain the expected rightside delimiter. For example, if the operand for the current control statement keyword is expected to be contained within parentheses, the right parentheses character was not found. See the ARSYSPIN program reference in IBM Content Manager OnDemand for z/OS and OS/390, Version 7.1: Administration Guide, SC27-1374 for the expected operand characteristics of a given keyword.
ARSYPXP

ARSY0108E Operand leftside delimiter not found

Explanation: The operand for the current control statement did not contain the expected leftside delimiter. For example, if the operand for the current control statement keyword is expected to be contained within parentheses, the left parentheses character was not found. See the ARSYSPIN program reference in IBM Content Manager OnDemand for z/OS and OS/390, Version 7.1: Administration Guide, SC27-1374 for the expected operand characteristics of a given keyword.

ARSYPXP

ARSY0109E Invalid operand length

Explanation: The supplied operand for the current control statement keyword is either too short or too long. See the ARSYSPIN program reference in IBM Content Manager OnDemand for z/OS and OS/390, Version 7.1: Administration Guide, SC27-1374 for the expected operand characteristics of a given keyword.

ARSYPXP

ARSY0110E True/False operand expected

Explanation: A boolean operand is expected for the current control statement keyword. See the ARSYSPIN program reference in IBM Content Manager OnDemand for z/OS and OS/390, Version 7.1: Administration Guide, SC27-1374 for the valid boolean operand values.

ARSYPXP

ARSY0111E Operand does not consist of all decimal digits

Explanation: The operand for the current control statement keyword is expected to consist solely of a string of decimal digits.

ARSYPXP

ARSY0112E Invalid suboperand length

Explanation: When processing an operand which may be specified as a parenthesized list of suboperands, one or more of these suboperands is either too short or too long. See the ARSYSPIN program reference in IBM Content Manager OnDemand for z/OS and OS/390, Version 7.1: Administration Guide, SC27-1374 for the expected operand characteristics of a given keyword.

ARSYPXP

ARSY0113I Control statements processing completed - RC= <integer> (x’<hexdigits>’)

Explanation: Processing of the control statement stream has completed. If the RC value is non-zero, then at least one syntax error has been detected and ARSYSPIN terminates its execution.

ARSYPXP

ARSY0114E Unrecognized subparameter: <string>

Explanation: The operand or suboperand for the current control statement keyword is expected to be a member of a set of specific character strings. For example, the ERROPT keyword expects its operand to be either ABEND, ACCEPT or HOLD. See the ARSYSPIN program reference in IBM Content Manager OnDemand for z/OS and OS/390, Version 7.1: Administration Guide, SC27-1374 for the allowable operand values for a given control statement keyword.

ARSYPXP
Part 4. ACIF messages
Chapter 8. Introduction

ACIF prints a message list at the end of each compilation. A return code of 0 means that ACIF completed processing without any errors. ACIF supports the standard return codes.

Notes:
1. ACIF messages contain instructions for the PSF or Infoprint® Manager system programmer. Please show your system programmer these messages, because they might not be contained in the PSF or Infoprint Manager messages publications.
2. AIX and Windows users can invoke the PSF MSG command on the server to view or print messages online.

Message Identifiers

ACIF issues the same messages for AIX, HP-UX, OS/390, Solaris, Windows, and z/OS. However, the message identifiers in AIX, HP-UX, Solaris, and Windows differ from those in OS/390 and z/OS:

- In AIX, HP-UX, Solaris, and Windows, the format of the message identifier is 0425-nnn, where:
  - 0425- Identifies a message in AIX, HP-UX, Solaris, or Windows.
  - nnn Specifies the three-digit message number.
- In OS/390 and z/OS, the format of the message identifier is APKnnn, where:
  - APK Identifies a message in OS/390 and z/OS.
  - nnn Specifies the three-digit message number.
  - t Specifies an error condition:

<table>
<thead>
<tr>
<th>Error Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>Severe error that causes ACIF to terminate processing the current print file. The exact method of termination can vary. For certain severe errors, ACIF abends with a return code and reason code. This is generally the case when some system service fails. In other cases, ACIF terminates with the appropriate error messages written to the message file specified when you invoked ACIF. Most error conditions detected by ACIF fall into the severe category.</td>
</tr>
<tr>
<td>W</td>
<td>Warning error that ACIF issues when the fidelity of the document (assuming it is reprinted) might be in question.</td>
</tr>
<tr>
<td>I</td>
<td>Informational error that ACIF issues when it processes a print file to let the operator or application programmer determine if the correct processing parameters have been specified. These messages can assist in providing an audit trail.</td>
</tr>
</tbody>
</table>

The three-digit message number, nnn, is the same in all environments (for example, 0425-031 in AIX, HP-UX, Solaris, and Windows or APK031 in OS/390 and z/OS).
In this publication, the ACIF messages and explanations are listed according to the OS/390 and z/OS message identifiers (for example, APK031I) because AIX, HP-UX, Solaris, and Windows users are more likely to use the PSF MSG command to view the messages online.

The terms used in the messages and explanations are those used for OS/390 and z/OS, even though the messages and explanations also apply to AIX, HP-UX, Solaris, and Windows. The following list shows some of the terms used in the messages in this publication and what those terms refer to in AIX, HP-UX, Solaris, and Windows:

<table>
<thead>
<tr>
<th>Term</th>
<th>AIX, HP-UX, Solaris, Windows</th>
</tr>
</thead>
<tbody>
<tr>
<td>print data set</td>
<td>input file</td>
</tr>
<tr>
<td>data set</td>
<td>input file</td>
</tr>
<tr>
<td>data stream</td>
<td>file</td>
</tr>
<tr>
<td>PSF</td>
<td>PSF or Infoprint Manager</td>
</tr>
<tr>
<td>record</td>
<td>data set</td>
</tr>
</tbody>
</table>

### Multiple Message Scenarios

ACIF can issue more than one error message as a result of a single error condition. These situations are limited to the area of parsing the structured field (for example, determining the length and type of the structured field). Some possible scenarios include these message numbers:

- 105, 108, 109, 103
- 105, 108, 110, 103
- 106, 108, 109, 103
- 106, 108, 110, 103

Any subset of the listed message numbers is also possible, provided you start with the first one (for example, 105, 108, 109 or 105, 108, or 105, 110, and so on). The first message accurately describes the error condition; any subsequent messages provide additional information. Additional error messages might not always be accurate.

Message number 101 can occur after many error conditions, because ACIF attempts to locate the end of the resource containing the error as part of its recovery procedure.
Chapter 9. Messages

APK031I AN INLINE MEDIUM MAP WAS ENCOUNTERED IN THE DATASET, BUT INLINE MEDIUM MAPS ARE NOT SUPPORTED.

Explanation: A Begin Medium Map (BMM) structured field was encountered in the data stream after resources for the data set had been processed. ACIF does not support inline medium maps between pages. The data set might have been created by a program that creates inline medium maps, but a data set that contains inline medium maps cannot be printed.

System Action: ACIF stops processing the print data set.

User Response: Correct the error and resubmit the request.

System Programmer Response: See the I/O error message to determine an appropriate action.

APK102S AN IM IMAGE OBJECT CONTAINS INVALID OR INCORRECT DATA. THE IM IMAGE OBJECT CANNOT BE CONVERTED TO AN IO IMAGE OBJECT.

Explanation: This message is issued when ACIF converts an IM image object to an IO image object and one of the image size values is zero. For a simple IM image object, this message is issued if either the XSize or YSize parameter value of the IID structured field is zero. For a complex IM image object, this message is issued if one of the XCSize, YCSize, XFilSize, or YFilSize parameter values of the ICP structured field is zero.

System Action: ACIF stops processing the input file.

User Response: Correct the error and resubmit the request.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK103S DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: structuredfield1 STRUCTURED FIELD WAS FOUND WHERE structuredfield2 STRUCTURED FIELD WAS EXPECTED.

Explanation: structuredfield1 is incorrect at the present point in the input data stream or resource. The structured-field type expected at this point is structuredfield2. Either the required structured field is missing or out of sequence, or a line-data record is in the wrong place.

Subsequent error messages give additional information about the processing environment when the error occurred.

System Action: ACIF stops processing the print data set.

User Response: If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation®: Programming Guide and Line Data Reference for more information on the correct format of the referenced structured field. If the structured fields are in the correct order, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK104S DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: structuredfield STRUCTURED FIELD IS NOT ALLOWED OR FORMS AN INVALID SEQUENCE.

Explanation: The structured field identified in this message is either out of sequence or not valid in an object. The record might be line data. If inline resources are used with data-set header pages, multiple resource groups might be present.

System Action: ACIF stops processing the print data set.

User Response: If you created the structured fields for the print data set or resource, correct the error and resubmit the print request.
the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information on the correct format of the referenced structured field. If the structured fields are in the correct order, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK105I THE ERROR REPORTED ABOVE OCCURRED IN LOGICAL RECORD NUMBER recordnumber, WHOSE SEQUENCE NUMBER IS sequencenumber.

Explanation: This message is given in addition to the message that describes the error. It identifies the specific input record that is not valid. The object (if any) that contains the not valid record is identified in either message APK108I or message APK109I.

The record number specified is relative to the user data stream and is different for multiple transmissions of the data set. However, the record number might be inaccurate if the data set is using a page definition that performs conditional processing.

The sequence number might print as NOT AVAILABLE in the message. For example, a line-data record does not have a sequence number.

System Action: The disposition of the file depends upon the error described in the accompanying messages.

User Response: See the specific error conditions described in the accompanying messages to determine an appropriate response.

System Programmer Response: See the specific error conditions described in the accompanying messages to determine an appropriate response.

APK108I DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: NAME tokenname IN begintypestructuredfield DOES NOT MATCH NAME tokenname IN endtypestructuredfield.

Explanation: The TOKEN NAME parameters in the Begin-type and End-type structured fields identified in this message do not match. Structured fields might be out of sequence in the input data stream.

When token names are specified, the TOKEN NAME parameters in the associated Begin-type and End-type structured fields must match.

System Action: Processing continues, and ACIF issues a message identifying the position of the structured field in the input data stream or resource. ACIF issues additional messages identifying the processing environment when the error was found.

User Response: If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK108I THE ERROR REPORTED ABOVE WAS DETECTED WITHIN OBJECT TYPE objecttype WITH TOKEN NAME tokenname.

Explanation: This message is issued in addition to the message that describes the error. The objects that were being processed are listed to identify the location of the error in the input data stream or in a resource.

System Action: The disposition of the file depends on the error described in the accompanying messages.

User Response: See the specific error conditions described in the accompanying messages to determine an appropriate response.

System Programmer Response: See the specific error conditions described in the accompanying messages to determine an appropriate response.
APK109I  THE ERROR REPORTED ABOVE WAS CAUSED BY THE RESOURCE resourcename IN AN EXTERNAL LIBRARY OR AN INLINE RESOURCE.

Explanation:  This message is issued in addition to the message that describes the error. The object identified in the accompanying message was either a resource being processed from an external library or an inline resource. Error message APK108I identifies the member as a page definition, form definition, font, code page, font character set, page segment, or an overlay. The combined information from these two messages can be used to identify the library defined to ACIF on the typeLIB parameter, where type is the type of resource, such as OVLY for overlay. In the case of an inline form definition or page definition, the resource is not a member of an external library but is included at the beginning of the user’s data set.

System Action:  The disposition of the file depends on the error described in the accompanying messages.

User Response:  See the specific error conditions described in the accompanying messages to determine an appropriate response.

System Programmer Response:  See the specific error conditions described in the accompanying messages to determine an appropriate response.

APK110S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE LENGTH SPECIFIED IN THE SELF-DEFINING PARAMETER identifier OF THE STRUCTURED FIELD structuredfield IS INCORRECT.

Explanation:  Insufficient data was present in the structured field for the length given in the self-defining parameter or triplet. If the self-defining parameter or triplet ID is 0, the length of the self-defining parameter or triplet might have been 0 or 1, which means that no ID was available for use in this message.

System Action:  If the error occurred in a structured field in a page or resource, PSF attempts to find the end of the page or resource. If PSF can find the end of the page, it prints any data accumulated for the current page. If PSF cannot find the end of the page, the data set is terminated. If the error occurred in a form definition, a page definition, or non-presentation object container resource (for example, COMSETUP), the form definition, page definition, or non-presentation object container resource is not used, and one of these occurs:

• PSF is not started for any of these:
  – The default form definition
  – A form definition specified for printing messages or separator pages
  – A page definition specified for printing messages or separator pages

• PSF cannot begin printing the data set for a form definition or non-presentation object container resource (or page definition if printing line date) specified on a user’s OUTPUT JCL statement; PSF tries to print the next data set. PSF issues a message identifying the position of the structured field in the data stream or resource. PSF issues additional messages identifying the processing environment in which the error occurred.

User Response:  If you created the structured fields for the object, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the object, contact your system programmer.

System Programmer Response:  If an IBM licensed program was used to create the structured fields for the object with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK112S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: RECORD CONTAINS NO DATA, EVEN THOUGH AT LEAST A CONTROL CHARACTER IS EXPECTED.

Explanation:  ACIF read an input record without a control character following the record descriptor word (RDW). A minimum of 1 byte of control-character data is needed to make the record valid.

System Action:  ACIF stops processing the print data set.

User Response:  If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured field, correct the error and resubmit the print request.
APK113S • APK116S

fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK113S** DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: STRUCTURED FIELD LENGTH IS LESS THAN THE INTRODUCER LENGTH.

**Explanation:** A structured field must have at least 8 bytes of data, the minimum length necessary for a structured-field introducer. The Extension Indicator flag in the structured-field introducer indicates whether the minimum length of the structured field can be greater than 8 bytes.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* or *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK114S** DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: RDW LENGTH DOES NOT AGREE WITH LENGTH IN STRUCTURED FIELD INTRODUCER.

**Explanation:** All structured fields are preceded by a record descriptor word (RDW) that specifies the length of that record, including the RDW. The record length in the RDW for the current record is less than the sum of the LENGTH parameter in the structured-field introducer and the number of bytes for both the RDW (4 bytes) and the control character (1 byte).

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the print data set or resource, ensure that the RDW for the structured field that is not valid contains a valid record length, and resubmit the print request. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK116S** DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: PADDING LENGTH OR EXTENSION LENGTH IS INCORRECT FOR STRUCTURED FIELD.

**Explanation:** The length of padding or extension specified in the LENGTH or EXTENSION parameter in the structured-field introducer indicates more data than was found in the structured field.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the print data set or resource, ensure that the Extension Indicator flag is set correctly and that the LENGTH parameter in the structured-field introducer specifies the actual length of padding for the structured field that is not valid. Refer to *Mixed Object Document Content Architecture Reference* or *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured-field introducer. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK117S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: LENGTH INDICATED IN THE STRUCTURED FIELD INTRODUCER IS INCORRECT FOR \textit{structuredfield} STRUCTURED FIELD.

\textbf{Explanation:} The length indicated by the structured-field introducer specifies an incorrect number of bytes for the structured field identified in this message. This error is caused by one of these:

- The Extension or Padding Indicator flags in the structured-field introducer are set incorrectly.
- One or more of the parameters in the structured field that is not valid contain too many bytes of data.

In some cases, the length of a structured field is specified in a parameter located in another structured field. For example, the length of Fixed Data Text (FDX) structured field is specified in the SIZE parameter of the Fixed Data Size (FDS) structured field.

\textbf{System Action:} ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

\textbf{User Response:} If you created the structured fields for the print data set or resource, ensure that the LENGTH parameter in the structured-field introducer specifies a valid length for the structured field. Also ensure that the number of bytes in the structured-field parameter matches the length specified in the structured-field introducer. Refer to \textit{Mixed Object Document Content Architecture Reference} or \textit{Advanced Function Presentation: Programming Guide and Line Data Reference} for more information about the structured-field introducer.

If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

\textbf{System Programmer Response:} If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system's diagnosis reference for assistance in determining the source of the problem.

---

APK118W  UNSUPPORTED STRUCTURED FIELD code WAS IGNORED, AND, IF IT BEGAN AN OBJECT, THE OBJECT WAS IGNORED.

\textbf{Explanation:} The IDENTIFIER parameter in the structured-field introducer for the incorrect structured field specified a structured-field code that was not recognized as a valid structured-field code.

\textbf{System Action:} If the structured field began an object, the object was ignored. Otherwise, only the structured field was ignored, and processing of the rest of the data set continues as usual.

ACIF issues a message identifying the position of the structured field in the input data stream or containing resource. ACIF issues additional messages identifying the processing environment when the error was found.

\textbf{User Response:} If the printed output was unacceptable, and you created the structured fields for the print data set or resource, give the incorrect structured field a valid code for its structured-field type. Refer to \textit{Mixed Object Document Content Architecture Reference} or \textit{Advanced Function Presentation: Programming Guide and Line Data Reference} for a list of valid structured-field types.

If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured field for the print data set or resource, contact your system programmer.

\textbf{System Programmer Response:} If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

APK120S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: \textit{structuredfield1} STRUCTURED FIELD CONTAINS AN INCORRECT VALUE FOR THE SIZE OF THE \textit{structuredfield2} REPEATING GROUP.

\textbf{Explanation:} \textit{structuredfield1} specifies the length of each repeating group found in \textit{structuredfield2}. Either the value specified in \textit{structuredfield1} for the size of the repeating group is too small, or the actual length of the repeating-group data is not a multiple of the size specified.

\textbf{System Action:} ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

\textbf{User Response:} If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to \textit{Mixed Object Document Content Architecture Reference} or \textit{Advanced Function Presentation: Programming Guide and Line Data Reference} for more information about the structured field. If the
structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK130S**  DATA IN AN INPUT RECORD IS INVALID: structuredfield STRUCTURED FIELD IS NOT ACCEPTABLE AT THE START OF A DATA STREAM.

**Explanation:** The structured-field type identified in this message is not valid at the start of the data stream. Subsequent error messages give additional information about the processing environment when the error occurred.

**System Action:** ACIF stops processing the print data set.

**User Response:** If you created the structured fields for the print data set, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK135I**  DATA IN A FORMDEF RESOURCE IS INVALID: DUPLICATE OVERLAY LOCAL IDENTIFIER WAS FOUND IN THE structuredfield STRUCTURED FIELD.

**Explanation:** The same local identifier was found assigned to more than one OVERLAY LOCAL IDENTIFIER parameter in the Map Medium Overlay (MMO) or Map Page Overlay (MPO) structured field repeating groups. The MMO structured field is contained in the form definition. The MPO is contained in the page definition or the print data set.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK138S**  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: OVERLAY LOCAL IDENTIFIER VALUE IS NOT ACCEPTABLE IN THE structuredfield STRUCTURED FIELD.

**Explanation:** An incorrect OVERLAY LOCAL IDENTIFIER was encountered in the Map Medium Overlay (MMO), Map Page Overlay (MPO), or Medium Modification Control (MMC) structured field repeating groups. The MMO and MMC structured fields are contained in the form definition. The MPO is contained in the page definition or the print data set.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK139S  DATA IN A FORMDEF RESOURCE IS INVALID: SUPPRESSION LOCAL IDENTIFIER VALUE IS NOT ACCEPTABLE IN THE MSU STRUCTURED FIELD.

Explanation: The SUPPRESSION LOCAL IDENTIFIER parameter in the Map Suppression (MSU) structured field is not valid. The MSU structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK140S  DATA IN A FORMDEF RESOURCE IS INVALID: TWO MMC STRUCTURED FIELDS ARE DEFINED WITH THE SAME IDENTIFIER, identifier.

Explanation: Two Medium Modification Control (MMC) structured fields in a single form environment group have the same value in their MEDIUM MODIFICATION CONTROL IDENTIFIER parameters. The MMC structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK141S  DATA IN A FORMDEF RESOURCE IS INVALID: MEDIUM SUPPRESSION TOKEN NAME IS REPEATED IN MSU STRUCTURED FIELD.

Explanation: The TOKEN NAME parameters in two repeating groups in a Map Suppression (MSU) structured field have the same value. The MSU structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK143S  DATA IN A FORMDEF RESOURCE IS INVALID: COPY SPECIFICATIONS IN THE MCC STRUCTURED FIELD ARE NOT ACCEPTABLE.

Explanation: Either a gap or an overlap exists in the Starting and Stopping Copy Numbers, or the maximum number of copies for one set of modifications has been exceeded. The COPY NUMBER parameters are specified in the Medium Copy Count (MCC) structured field. The MCC structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, ensure that the Starting Copy Number
and Stopping Copy Number parameters in a repeating group in an MCC structured field have valid values that correlate. Also, verify that fewer than 255 copies have been requested. If 255 or more copies with the same modifications are needed, define two or more MCC structured fields. Refer to Mixed Object Document Content Architecture Reference for more information on the MCC structured field. If the MCC has no errors, the error might be an ACIF logic error.

If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK145S** DATA IN A FORMDEF RESOURCE IS INVALID: THE FORMS-FLASH VALUE IN MMC STRUCTURED FIELD, ID identifier, IS NOT ACCEPTABLE.

**Explanation:** The Medium Modification Control (MMC) structured field contains an incorrect value for the repeating group that contains forms-flash modification. The MMC structured field is contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK146S** DATA IN A FORMDEF RESOURCE IS INVALID: MORE THAN 8 OVERLAYS ARE SPECIFIED IN MMC STRUCTURED FIELD, ID identifier.

**Explanation:** In a Medium Modification Control (MMC) structured field, the maximum number of overlays allowed in one set of modifications has been exceeded. The MMC structured field is contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK147S** DATA IN A FORMDEF RESOURCE IS INVALID: MORE THAN 8 SUPPRESSIONS ARE SPECIFIED IN MMC STRUCTURED FIELD, ID identifier.

**Explanation:** In a Medium Modification Control (MMC) structured field, the maximum number of suppressions allowed in one set of modifications has been exceeded. The MMC structured field is contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
DATA IN A FORMDEF RESOURCE IS INVALID: MMC STRUCTURED FIELD WAS NOT FOUND TO COMPARE WITH IDENTIFIER identifier IN MCC STRUCTURED FIELD.

**Explanation:** The MEDIUM MODIFICATION CONTROL IDENTIFIER parameter in the Medium Copy Count (MCC) structured field contains a value that did not match the MEDIUM MODIFICATION CONTROL IDENTIFIER parameter in any Medium Modification Control (MMC) structured field in the form environment group. The MCC and MMC structured fields are contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the MCC or MMC structured field. Refer to [Mixed Object Document Content Architecture Reference](#) for more information about the structured field. If the MCC and MMC have no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

DATA IN A FORMDEF RESOURCE IS INVALID: OVERLAY LOCAL IDENTIFIER IN MMC STRUCTURED FIELD, ID identifier, WAS NOT FOUND IN MMO STRUCTURED FIELD.

**Explanation:** The overlay modification in the Medium Modification Control (MMC) structured field was not present in the Map Medium Overlay (MMO) structured field. The MMC and MMO structured fields are contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to [Mixed Object Document Content Architecture Reference](#) for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

DATA IN A FORMDEF RESOURCE IS INVALID: TOO MANY COPY CONTROLS WERE SPECIFIED FOR THE CURRENT FORM ENVIRONMENT GROUP.

**Explanation:** For a given physical page, up to 256 bytes of data can be specified for the printer command that describes the copies and modifications to be made. The current form environment group causes the data for the command to exceed 256 bytes. ACIF builds the printer command from data contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, either reduce the number of copy groups in the Medium Copy Count (MCC) structured field or reduce the number of modifications specified in the Medium Modification Control (MMC) structured field. Otherwise, split these functions between two or more form environment groups in two or more medium maps. Then, include in your input two or more identical copies of the same page that each select an appropriate copy group by use of the Invoke Medium Map (IMM) structured field. Refer to [Mixed Object Document Content Architecture Reference](#) for more information about the MMC and MMO structured fields.

If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK156S • APK158I

APK156S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: NULL NAME IS NOT ACCEPTABLE IN structuredfield STRUCTURED FIELD.

Explanation: All Begin-type and End-type structured fields can include an 8-byte token name. A null token name is not allowed for the listed structured field.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK157S  MISMATCH BETWEEN PRINT DATA SET AND FORMDEF RESOURCE: MEDIUM MAP mediummap SPECIFIED IN IMM STRUCTURED FIELD WAS NOT FOUND IN FORMDEF formdefinition.

Explanation: The TOKEN NAME parameter in the Invoke Medium Map (IMM) structured field specifies the token name used to locate a medium map in the form definition. This parameter must match the TOKEN NAME parameter specified in bytes 0–7 in one of the Begin Medium Map (BMM) structured fields in the current form definition. The IMM structured field is contained in the print data set.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: Ensure that the correct form definition was specified. If it was, and if you added the Invoke Medium Map structured field to the print data set, change the TOKEN NAME in the IMM structured field and run ACIF. Refer to Mixed Object Document Content Architecture Reference for more information about the BMM and IMM structured fields. If the correct form definition was specified, and if you used a program to embed the IMM structured field in the print data set, verify that the copy group name that you gave the program is valid for the form definition you have specified.

System Programmer Response: No response is necessary.

APK158I  PAGEDEF PARAMETER MUST BE SPECIFIED IN ORDER TO PRINT THIS DATA SET. DETERMINE THE PERMISSIBLE VALUES USED IN YOUR INSTALLATION FOR THE PAGEDEF PARAMETER.

Explanation: The current data set contains line data, XML data, or structured fields that do not form a MO:DCA-P page. This kind of data set cannot be printed without an active page definition. No PAGEDEF keyword was provided on the OUTPUT JCL statements for this job, and no default page definition was defined in the PSF initialization procedure.

This error can also occur if MO:DCA-P data in the print data set contains a record without the required X’5A’ control character preceding the structured-field introducer. The missing control character makes the record appear to be line data. A page definition is necessary to process line data. Therefore, PSF detects an error.

System Action: ACIF stops processing the print data set.

User Response: If you intended to print line data or XML data, do one of these to specify a page definition:

- Code the PAGEDEF parameter on the OUTPUT JCL statement. For information about how to code the OUTPUT statement, refer to PSF for OS/390 and z/OS: User’s Guide.
- Code the FCB parameter on the DD JCL statement.
- Request that your system programmer code a default page definition name in the PSF initialization procedure.

If you did not intend to print line data or XML data, and you used a program to create the structured fields for the print data set, ensure that all MO:DCA-P data records begin with the X’5A’ control character and then contact your system programmer.
APK159S  THE END OF THE DATA STREAM WAS ENCOUNTERED BEFORE THE LOGICAL END OF AN OBJECT WITHIN THE DATA STREAM.

Explanation: ACIF was processing an object that began with a Begin-type structured field. However, the input data stream ended before a corresponding End-type structured field was found. The message can also occur if the system operator prematurely interrupts or ends a print request by issuing an INTERRUPT, RESTART, or CANCEL Job Entry Subsystem (JES) command.

System Action: ACIF stops processing the print data set.

User Response: If you created the structured fields for the print data set, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK162S  MISMATCH BETWEEN PRINT DATA SET AND PAGDEF RESOURCE: DATA MAP datamap SPECIFIED IN IDM STRUCTURED FIELD WAS NOT FOUND IN PAGDEF pagedefinition.

Explanation: The TOKEN NAME parameter in the Invoke Data Map (IDM) structured field specifies the token name used to locate a data map in the page definition. The name must match the value specified in the TOKEN NAME parameter in the Begin Data Map (BDM) structured field in the current page definition. The IDM structured field is contained in the print data set.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: Ensure that the correct page definition was specified. If it was, and if you added the Invoke Data Map structured field to the print data set, change the TOKEN NAME in the IDM structured field and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the BDM and IDM structured fields. If the correct page definition was specified, and if you used a program to embed the IDM structured field in the print data set, verify that the data map name that you supplied the program is one that is valid for the page definition you have specified.

System Programmer Response: No response is necessary.

APK163S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE SCALE FACTOR VALUE IN THE IOC STRUCTURED FIELD IS NOT ACCEPTABLE.

Explanation: The IMAGE BLOCK SCALE FACTOR parameter in the Image Output Control (IOC) structured field is not valid. The image block or image cell might be contained in an overlay, a page segment, or a composed-text print data set. It might also be embedded in a data set containing line data, using a Begin Image (BIM) structured field.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the resource or print data set containing the image, correct the error in the referenced structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the resource or print data set containing the image, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK166S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: AN ENTRY IN A MCF STRUCTURED FIELD CONTAINS AMBIGUOUS IDENTIFICATION.

Explanation: A font in the Map Coded Font (MCF) structured field can be identified with a CODED FONT NAME parameter, with a combination of the FONT CHARACTER SET NAME parameter and the CODE PAGE NAME parameter, or with a CODED FONT parameter (also known as a GRID parameter). One of the repeating groups in an MCF structured field specified more than one of these ways to specify a font or specified a CODED FONT (GRID) and a section number other than 0. The MCF structured field is in the MO:DCA-P data, an overlay, or a page definition.

System Action: If the error is contained in a page definition, PSF terminates processing of the data set and continues processing with the next data set. Otherwise, PSF terminates the page or overlay containing the structured field in error. PSF attempts to locate the end of the current page and resume processing on the next page. If the end of the current page cannot be located, PSF stops printing the data set. PSF issues a message identifying the position of the structured field in the input data stream or resource. PSF issues additional messages identifying the processing environment when the error was found.

User Response: If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an PSF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK167S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: AN ENTRY IN AN MCF STRUCTURED FIELD CONTAINS INCOMPLETE IDENTIFICATION.

Explanation: One of the repeating groups in a Map Coded Font (MCF) structured field does not contain enough information to identify a coded font. Two ways to identify a font in the Map Coded Font (MCF) structured field are either with a CODED FONT NAME parameter or with a combination of the FONT CHARACTER SET NAME parameter and the CODE PAGE NAME parameter. An entry contains only a FONT CHARACTER SET NAME parameter or a CODE PAGE NAME parameter. The MCF structured field is contained in a composed-text print data set, an overlay, or a page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK169S  INSUFFICIENT VIRTUAL STORAGE PREVENTED FURTHER PROCESSING. INCREASE REGION SIZE, AND RESUBMIT THE PRINT REQUEST.

Explanation: Insufficient storage is available in the ACIF address space to contain the internal control block needed to read an object.

System Action: ACIF stops processing the print data set.

User Response: Inform your system programmer that this error occurred.

System Programmer Response: The value of the REGION parameter used for the ACIF job should be increased.
APK170S  DATA IN A FORMDEF RESOURCE IS INVALID: THE SIMPLEX/DUPLEX VALUE IN MMC STRUCTURED FIELD, ID identifier, IS NOT ACCEPTABLE.

Explanation: In the Medium Modification Control (MMC) structured field with the specified identifier, either the simplex or the duplex keyword-parameter value is not valid. The MMC structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK171S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: FONT LOCAL IDENTIFIER VALUE IS NOT ACCEPTABLE IN THE STRUCTURED FIELD.

Explanation: The Map Coded Font (MCF) structured field consists of repeating groups. In one of the groups, the value of the CODED FONT LOCAL IDENTIFIER parameter for the font (section) being mapped is not valid. The MCF structured field is contained in a composed-text print data set, an overlay, or a page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK172S  DATA IN A FORMDEF RESOURCE IS INVALID: THE SET OF MODIFICATIONS SPECIFIED IN THE MCC STRUCTURED FIELD INCLUDES BOTH NORMAL AND TUMBLE DUPLEX.

Explanation: The Medium Copy Count (MCC) structured field refers to one or more Medium Modification Control (MMC) structured fields, which include requests for both normal duplex and tumble duplex. You cannot request both normal duplex and tumble duplex within the same medium map. The MCC and MMC structured fields are contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the MCC or MMC structured field. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MCC and MMC have no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK178S  DATA IN A FORMDEF RESOURCE IS INVALID: THE MCC STRUCTURED FIELD HAS AN ODD NUMBER OF COPY GROUPS, BUT SPECIFIES DUPLEX.

Explanation: The Medium Copy Count (MCC) structured field specifies an odd number of copy groups, but the copy group modifications specified in the Medium Modification Control (MMC) structured field include duplex,
which requires an even number of copy groups. The MCC and MMC structured fields are contained in the form
definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the
structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the MCC or MMC structured
field. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If
the MCC and MMC have no errors, the error might be an ACIF logic error. If you used a program to create the
structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form
definition with the error, verify that the input to that program was valid. If the input was valid, refer to your
system’s diagnosis reference for assistance in determining the source of the problem.

APK179S DATA IN A FORMDEF RESOURCE IS INVALID: THE SET OF MODIFICATIONS SPECIFIED IN
THE MCC STRUCTURED FIELD INCLUDES BOTH SIMPLEX AND DUPLEX.

Explanation: The Medium Copy Count (MCC) structured field refers to two or more Medium Modification Control
(MMC) structured fields, which include requests for both simplex and duplex printing. You cannot specify both
simplex and duplex printing within the same medium map. The MCC and MMC structured fields are contained in
the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the
structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the MCC or MMC structured
field. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If
the MCC and MMC have no errors, the error might be an ACIF logic error. If you used a program to create the
structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form
definition with the error, verify that the input to that program was valid. If the input was valid, refer to your
system’s diagnosis reference for assistance in determining the source of the problem.

APK181S DATA IN A FORMDEF RESOURCE IS INVALID: UNEQUAL COPY COUNTS FOR DUPLEX
SHEETS ARE SPECIFIED IN THE MCC STRUCTURED FIELD.

Explanation: The set of modifications referred to by the Medium Copy Count (MCC) structured field includes
duplexing, but the numbers of copies in two corresponding repeating groups are not equal. The repeating groups are
defined in the Medium Map Control structured field (MMC). The MCC and MMC structured fields are contained in
the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the
structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the MCC or MMC structured
field. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If
the MCC and MMC have no errors, the error might be an ACIF logic error. If you used a program to create the
structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form
definition with the error, verify that the input to that program was valid. If the input was valid, refer to your
system’s diagnosis reference for assistance in determining the source of the problem.

APK182S DATA IN A FORMDEF RESOURCE IS INVALID: THE SET OF MODIFICATIONS SPECIFIED IN
THE MCC STRUCTURED FIELD INCLUDES CONFLICTING PRESENTATION SYSTEM SETUP
ID VALUES.

Explanation: Multiple MMC structured fields referenced by the MCC structured field do not use the exact same set
of Presentation System Setup ID values.

System Action: ACIF stops processing the print data set.

User Response: If you created the structured fields for the form definition, correct the MCC structured field. Refer
to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MCC
has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

### APK183S  DATA IN A FORMDEF RESOURCE IS INVALID: THE MODIFICATIONS SPECIFIED IN THE MMC STRUCTURED FIELD INCLUDE UNPAIRED **keyword1** AND **keyword2** KEYWORDS.

**Explanation:** The keywords must be paired in the Medium Modification Control (MMC) structured field. This form definition has one or the other keyword but not both, or the keyword pairs are not adjacent. The MMC structured field is contained in the form definition.

**System Action:** The form definition containing the error is not used, and one of these occurs:

- PSF is not started if the form definition containing the error is defined in the PSF startup procedure. The form definition resources defined in the PSF startup procedure are for separator pages, for the message data set, and for the default form definition resource for user print data sets.
- If the error is in a form definition specified on the user’s OUTPUT JCL statement, PSF cannot begin printing the data set; it tries to print the next data set. PSF issues a message identifying the position of the structured field in the form definition. PSF issues additional messages identifying the processing environment when the error was found.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an PSF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

### APK188S  THE SET OF MODIFICATIONS SPECIFIED IN THE MCC STRUCTURED FIELD SELECTS MORE THAN ONE INPUT SOURCE, AND THE DEVICE DOES NOT SUPPORT MORE THAN ONE INPUT SOURCE.

**Explanation:** The Medium Copy Count (MCC) structured field refers to one or more Medium Modification Control (MMC) structured fields, which include requests for more than one input source or media type local ID. You cannot specify more than one input source or media type local ID for multiple copy groups, because the printer you are using does not support it. The MCC and MMC structured fields are in the form definition.

**System Action:** The form definition containing the error is not used, and one of these occurs:

- If the error is in the default form definition, or a form definition specified for printing messages or separator pages, PSF is not started.
- If the error is in a form definition specified on the user’s OUTPUT JCL statement, PSF cannot begin printing the data set; it tries to print the next data set. PSF issues a message identifying the position of the structured field in the form definition. PSF issues additional messages identifying the processing environment in which the error occurred.

**User Response:** Request that the job be printed on a printer that supports the specification of input source in the Load Copy Control (LCC) command. If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MMC has no errors, the error might be a PSF or printer logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.
APK190S  DATA IN A FORMDEF RESOURCE IS INVALID: THE BIN-SELECTION VALUE IN MMC STRUCTURED FIELD, ID identifier, IS NOT ACCEPTABLE.

Explanation: In the Medium Modification Control (MMC) structured field with the identifier specified in the message text, the bin-selection parameter value was not valid. The MMC structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK191S  DATA IN A FORMDEF RESOURCE IS INVALID: THE SUPPRESSION LOCAL IDENTIFIER VALUE IN MMC STRUCTURED FIELD, ID identifier, IS NOT ACCEPTABLE.

Explanation: The MEDIUM MODIFICATION CONTROL IDENTIFIER parameter in a Medium Modification Control (MMC) structured field is not valid. The MMC structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK209S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: structuredfield1 STRUCTURED FIELD WAS FOUND WHERE structuredfield2 STRUCTURED FIELD WAS EXPECTED.

Explanation: structuredfield1 is incorrect at the present point in the input data stream or resource. The structured-field type expected at this point is structuredfield2. Either the required structured field is missing or out of sequence, or a line-data record is in the wrong place.

Subsequent error messages give additional information about the processing environment when the error occurred.

System Action: ACIF stops processing the print data set.

User Response: If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information on the correct format of the referenced structured field. If the structured fields are in the correct order, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK210S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: A REQUIRED TRIPLET OR SELF-DEFINING PARAMETER WITH ID identifier WAS MISSING FROM A structuredfield STRUCTURED FIELD.

Explanation: The triplet or self-defining parameter specified in the message was not found in the structured field indicated. This is a required triplet or self-defining parameter.

System Action: If the structured field is included in an object container, bar code, graphics, or image object
embedded in a page or overlay, PSF ignores the object and continues processing the current page or overlay.

If the structured field is in a resource included by a page or overlay, PSF terminates the page or overlay. PSF attempts to locate the end of the current page and resumes processing on the next page. If the end of the current page cannot be located, PSF stops printing the data set. For non-presentation object containers, PSF stops printing the data set.

If the error is contained in a page definition or form definition, PSF terminates processing of the data set and continues processing with the next data set. PSF issues a message that identifies the position structured field in the input data stream or resource. PSF issues additional messages identifying the processing environment in which the error occurred.

**User Response:** If you created the structured fields, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the image object, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK212S**  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE UNIT BASE PARAMETER IN THE **structuredfield** STRUCTURED FIELD IS INVALID.

**Explanation:** An incorrect Unit Base value was encountered in the structured field identified in this message. The structured field is contained in the Object Environment Group of an image object. The image object might be contained in a composed-text print data set, an overlay, or a page segment; or it might be embedded in a data set containing line data.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the image object, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* or *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the image object, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the image object with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK213S**  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE L-UNITS PER UNIT BASE PARAMETER IN THE **structuredfield** STRUCTURED FIELD IS INVALID.

**Explanation:** An incorrect L-Units value was encountered in the structured field identified in this message. The structured field is contained in the Object Environment Group of an image object. The image object might be contained in a composed-text print data set, an overlay, a page segment; or it might be embedded in a data set containing line data.

**System Action:** ACIF stops processing the print data set. ACIF issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the image object, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the image object, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the image object with the error, verify that the input to that program was valid. If the input was valid, refer to *Advanced Function Printing: Diagnosis Guide* for assistance in determining the source of the problem.
APK217S  DATA IN AN INPUT RECORD IS INVALID: PARAMETER IN A BR STRUCTURED FIELD CONTAINS UNACCEPTABLE DATA.

Explanation: One of the parameters in the Begin Resource (BR) structured field is not valid. The BR structured field is contained in the print data set.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you placed the BR structured field in the print data set, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If you used a program to place the BR structured field in the print data set, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to place the BR structured field in the print data set, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK221S  DATA IN A FORMDEF RESOURCE IS INVALID: THE ORIENTATION VALUE value IN THE MDD STRUCTURED FIELD IS UNACCEPTABLE.

Explanation: The Medium Descriptor (MDD) structured field has an incorrect orientation value. The MDD structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK244I  DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: THE structuredfield STRUCTURED FIELD CONTAINS TOO MANY REPEATING GROUPS.

Explanation: The structured field contains more repeating groups than are allowed. The structured field in which the error appears can be in a resource environment group, a composed text page, an overlay, or a page definition.

System Action: If this error occurs in a resource, PSF stops processing the data set. If this error occurs in a resource environment group, PSF stops processing the resource environment group and continues processing the data set.

If this error occurs in a composed text page, PSF stops processing the current page. PSF attempts to find the end of the current page and resume printing on the next page. If unable to find the end of the current page, PSF stops printing the data set.

PSF issues additional messages identifying the processing environment in which the error was found.

User Response: If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK245I  A COMPLEX IM IMAGE OBJECT CONTAINS INVALID OR INCORRECT DATA. THE COMPLEX IM IMAGE OBJECT CANNOT BE CONVERTED TO AN IO IMAGE OBJECT.

Explanation: This message is issued when ACIF converts a complex IM image object to an IO image object and the image size is not large enough to contain the image raster data from the IRD structured fields. This message is issued when the default IMAGEOUT=IOCA parameter is specified. This message is issued if either of these are true:
- The XCSIZE or YCSIZE parameter value of the ICP structured field is larger than the calculated image X size or Y size, respectively.
- The XCOSET plus XFilSize parameter values or the YCOSET plus YFilSize parameter values of the ICP structured field are larger than the calculated image X size or Y size, respectively.

When ACIF converts a complex IM image object to an IO image object, ACIF calculates the image size by subtracting the X and Y image origins from the X and Y page sizes. The X and Y image origins are from the Xoa0set and Yoao0set parameter values of the IOC structured field. The X and Y page sizes are from the XpgSize and YpgSize parameter values of the PGD structured field, if the image object is contained in a MO:DCA-P file or overlay, or is embedded in a file containing line data. For an image object in a page segment, the X and Y page sizes used by ACIF are 2040 and 2640 respectively. The IOC and ICP structured fields are contained in a MO:DCA-P file, overlay, or page segment, or are embedded in a file containing line data. The PGD structured field is contained in a MO:DCA-P file, overlay, or page definition.

**System Action:** ACIF terminates.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

### APK246S 
**DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: A REQUIRED TRIPLET WITH ID IDENTIFIER WAS MISSING FROM AN IOB STRUCTURED FIELD.**

**Explanation:** When identifier is:

X’4C’  The x- or y-axis origin for object content or an object area size (X’4C’) triplet was specified on an IOB, but no measurement unit (X’4B’) triplet was specified. The structured field is contained in a print data set or overlay.

X’22’  The Extended Resource Local Identifier (X’22’) triplet is required when the IOB structured field is contained in a page definition.

**System Action:** If the error is contained in a page definition, PSF terminates processing of the data set and continues processing with the next data set. Otherwise, PSF terminates the page or overlay containing the structured field in error. PSF attempts to locate the end of the current page and resumes processing on the next page. If the end of the current page cannot be located, PSF stops printing the data set. PSF issues a message identifying the position of the structured field in the input data stream or resource. PSF issues additional messages identifying the processing environment when the error was found.

**User Response:** If you placed the IOB structured field in the input data set or overlay, correct the error and resubmit the ACIF job. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If you used a program to place the IOB structured field in the print data set or overlay, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to place the IOB structured field in the print data set or overlay, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

### APK247S 
**DATA IN AN INPUT RECORD IS INVALID: A PARAMETER IN AN IOB STRUCTURED FIELD CONTAINS UNACCEPTABLE DATA.**

**Explanation:** One of the parameters in the Include Object (IOB) structured field is not valid. The object type specified is not supported or is not valid or the x or y offset of the object area or the rotation value are not explicitly specified when the reference coordinate system is set to X’00’. The IOB structured field is contained in the print data set or an overlay.

**System Action:** ACIF stops processing the input data set.

**User Response:** If you placed the IOB structured field in the input data set or overlay, correct the error and resubmit the ACIF job. Refer to *Mixed Object Document Content Architecture Reference* for more information about the...
structured field. If you used a program to place the IOB structured field in the print data set or overlay, contact your system programmer.

**System Programmer Response:** No response is necessary.

---

**APK248S**  
**DATA IN A PAGE SEGMENT IS INVALID:** *structured field*  
**STRUCTURED FIELD IS NOT ALLOWED IN A PAGE SEGMENT INCLUDED WITH AN IOB.**

**Explanation:** Only MO:DCA-P page segments are allowed to be included with an IOB structured field. MO:DCA-P page segments cannot contain IM1 image or PTOCA data.

**System Action:** ACIF stops processing the input data set.

**User Response:** If you placed the IOB structured field in the input data set or overlay, correct the error and resubmit the ACIF job. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If you used a program to place the IOB structured field in the print data set or overlay, contact your system programmer.

**System Programmer Response:** No response is necessary.

---

**APK250S**  
**DATA IN A PAGE OR RESOURCE IS MISSING:** THE REQUIRED STRUCTURED FIELD *structured field* **COULD NOT BE FOUND TO COMPLETE THE PROCESSING OF A PAGE OR RESOURCE.**

**Explanation:** The structured field identified in this message is required to complete the processing of a page or resource. This structured field was not found before the end of the page or resource was encountered.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* or *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK251S**  
**DATA IN A FORMDEF RESOURCE IS MISSING:** THE FORMDEF DOES NOT CONTAIN ANY MEDIUM MAPS.

**Explanation:** The form definition did not specify any medium maps; however, a medium map is required to print a page.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK252I**  
**THE SET OF MODIFICATIONS SPECIFIED IN THE MCC STRUCTURED FIELD INDICATES DIFFERENT SELECT INPUT SOURCE VALUES FOR THE FRONT AND BACK SIDES OF A DUPLEX SHEET.**

**Explanation:** The Medium Modification Control (MMC) structured field referenced by the Medium Copy Count (MCC) structured field repeating groups specify different input source or media type local ID values, along with
either tumble or normal duplex. This is an attempt to print the front and back sides of a sheet from different input bins.

**System Action:** The form definition containing the error is not used, and one of these occurs:
- If the error is in the default form definition, or a form definition specified for printing messages or separator pages, PSF is not started.
- If the error is in a form definition specified on the user's OUTPUT JCL statement, PSF cannot begin printing the data set; it tries to print the next data set. PSF issues a message identifying the position of the structured field in the form definition. PSF issues additional messages identifying the processing environment when the error was found.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK253S** DATA IN A FORMDEF RESOURCE IS INVALID: THE PRINT QUALITY VALUE IN MMC STRUCTURED FIELD, ID *identifier*, IS NOT ACCEPTABLE.

**Explanation:** The Medium Modification Control (MMC) structured field specified a print quality value of 0, which is outside the valid range. The MMC structured field is contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system's diagnosis reference for assistance in determining the source of the problem.

---

**APK254S** DATA IN A FORMDEF RESOURCE IS INVALID: THE OFFSET STACKING VALUE IN MMC STRUCTURED FIELD, ID *identifier*, IS NOT ACCEPTABLE.

**Explanation:** The Medium Modification Control (MMC) structured field specified an offset stacking value other than 0 or 1. The MMC structured field is contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system's diagnosis reference for assistance in determining the source of the problem.

---

**APK255S** DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE FONT RESOLUTION AND METRIC TECHNOLOGY TRIPLET SPECIFIES AN INCORRECT VALUE.

**Explanation:** There is an incorrect value specified for the metric technology, the unit base, or the units per unit base field in the Font Resolution and Metric Technology triplet (X'84'). The triplet is specified on a Map Coded Font (MCF) structured field, which can be in an print data set or overlay.

**System Action:** ACIF stops processing the print data set.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and
resubmit the job to ACIF. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK256S**  
DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE *structured field* STRUCTURED FIELD CONTAINS A *triplet* TRIPLET THAT HAS AN INVALID VALUE. THE INVALID VALUE STARTS IN BYTE *byte* OF THE TRIPLET.

**Explanation:** An incorrect value was specified for a field that starts in byte offset of the triplet identified in this message. The triplet is specified on the structured field identified in this message.

**System Action:** If the error occurred in a form definition, a page definition, or a non-presentation object container resource (for example, COMSETUP), the form definition, page definition, or non-presentation object container resource is not used, and one of these occurs:

- PSF is not started for any of these:
  - The default form definition
  - A form definition specified for printing messages or separator pages
  - A page definition specified for printing messages or separator pages
- PSF cannot begin printing the data set for a form definition or non-presentation object container resource (or page definition if printing line date) specified on a user’s OUTPUT JCL statement; PSF tries to print the next data set. If the error occurred in a structured field in a page or another type of resource, PSF attempts to find the end of the page or resource. If PSF can find the end of the page or resource, it prints any data accumulated for the current page. If PSF cannot find the end of the page or resource, the data set is terminated.

PSF issues a message identifying the position of the structured field in the data stream or resource. PSF issues additional messages identifying the processing environment in which the error occurred.

**User Response:** If you created the structured fields for the object, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the object, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**APK258S**  
DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: *structured field* STRUCTURED FIELD IS NOT ALLOWED BETWEEN OBJECTS.

**Explanation:** The structured field identified in this message is not allowed at the point in the input data stream or resource at which it was found.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured fields are in the correct order, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK259S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE X-DIRECTION AND Y-DIRECTION L-UNITS PER UNIT BASE VALUES SPECIFIED IN STRUCTURED FIELD \textit{structuredfield} \textbf{DO NOT MATCH}.

**Explanation:** The X-direction and Y-direction L-Units per Unit Base values in the structured field identified in the message are not identical.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to \textit{Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference} for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK260S  THE OBJECT SPECIFIED WITH THE \textit{structuredfield} STRUCTURED FIELD IS NOT SUPPORTED ON THIS PRINTER.

**Explanation:** PSF has encountered a valid AFP object that is not supported by the printer. The object is identified either by its Begin structured field, by an Invoke structured field, such as Include Page Overlay (IPO), or by an OTH record (object container without MO:DCA-P structured fields wrapping the data).

**System Action:** If the object or Invoke structured field is embedded in a page or overlay, PSF ignores the object and continues processing the current page or overlay.

If the Begin structured field, the Invoke structured field, or the OTH record is in a resource included by a page or overlay, PSF terminates the page or overlay. PSF attempts to locate the end of the current page and resume processing on the next page. If the end of the current page cannot be located, PSF stops printing the data set.

**User Response:** To print the object type indicated in the message, submit the print job to a printer that supports the object type. For more information about what object types are supported by your printer, refer to your printer documentation.

**System Programmer Response:**

Delete the unsupported object type from the separator page data set for this printer.

APK261S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: STRUCTURED FIELD \textit{structuredfield} CONTAINED A CODED-FONT-LOCAL-IDENTIFIER VALUE THAT WAS USED IN A PREVIOUS FONT MAPPING STRUCTURED FIELD.

**Explanation:** One or more font mapping structured fields in the same active environment group or object environment group used the same coded font local identifier for different coded fonts. The Map Coded Font (MCF) structured field that attempted to use the already-mapped coded font local identifier is identified in the message. The MCF structured field can be contained in a composed-text print data set, an overlay, or a page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you were printing a composed-text print data set or an overlay, and you created the structured fields in the object containing the error, check the Coded Font Local Identifiers in the MCF structured field for duplicates. If the MCF structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields in the object containing the error, contact your system programmer.

If you were printing a data set containing line data using a page definition, and if you created the structured fields for the page definition, check the Coded Font Local Identifiers in the MCF structured field for duplicates. If the MCF structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

Refer to \textit{Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference} for more information about the structured field.
**APK262S**  **DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: STRUCTURED FIELD structuredfield CONTAINS AN INVALID ROTATION VALUE.**

**Explanation:** The rotation value specified in the named structured field was not valid.

**System Action:** ACIF stops processing the print data set. ACIF issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* or *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK263S**  **DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: OVERLAY overlayname NAMED IN AN IPO STRUCTURED FIELD IS NOT NAMED IN AN MPO STRUCTURED FIELD.**

**Explanation:** An Include Page Overlay (IPO) structured field names a page overlay, but the overlay was not previously defined in the Map Page Overlay (MPO) structured field in the Active Environment Group (AEG) of the page, which contains the IPO. The MPO might be contained in the AEG of a composed-text page or a page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If the MPO indicates that this overlay is for annotation only, create another MPO structured field in the AEG that defines the page overlay. If you are using the input data to define the name of your page overlay and your input data is ASCII, this error can occur because the resource name in the MPO is EBCDIC. If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you use a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK264S**  **DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: A RESOURCE MAPPED BY A structuredfield STRUCTURED FIELD IN AN OBJECT ENVIRONMENT GROUP IS NOT NAMED IN THE ACTIVE ENVIRONMENT GROUP OF THE PAGE OR RESOURCE.**

**Explanation:** A structured field in an object environment group names a resource. However, that resource is not defined in the structured field in the active environment group of the page or resource containing the object environment group.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource. ACIF stops processing and printing the data set.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* or *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
DATA IN A FORMDEF RESOURCE IS INVALID: THE SCOPE OF THE MFC IS `scope` BUT `structuredfield` IS THE STRUCTURED FIELD THAT BOUNDS THE MFC.

**Explanation:** Either a document environment group or a medium map in the current form definition contains a Medium Finishing Control (MFC) structured field with an incorrect value specified for the scope.

**System Action:** The MFC is ignored and processing continues. ACIF issues additional messages identifying the processing environment in which the error occurred.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* or *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

THE INPUT BIN SPECIFIED IN THE MMC STRUCTURED FIELD OR ON THE OUTPUT STATEMENT IS AN INserter BIN AND IS DISABLED. AN ALTERNATIVE BIN WAS SUBSTITUTED.

**Explanation:** The Medium Modification Control (MMC) structured field or the output statement requested an input bin that is supported by the printer but is disabled. This bin is an inserter bin. The MMC structured field is contained in the form definition. The output statement is in the JCL.

**System Action:** ACIF continues processing, selecting paper from an alternative bin. The inserter pages are blank sheets from the alternative bin.

**User Response:** If the output is not acceptable, submit the print request to a printer that has the specified bin available, or ensure that the bin is enabled on the original printer before resubmitting the print request.

**System Programmer Response:** No response is necessary.

EITHER NO ENVIRONMENT GROUP WAS SPECIFIED FOR THE PAGE OR AN ERROR OCCURRED IN THE ENVIRONMENT GROUP.

**Explanation:** Either no environment group was specified, or an error occurred in one of the structured fields in the environment group. If an environment group was present but contained an error, a previous ACIF message identifies the error. The environment group causing this error might be contained in an overlay, a page definition, or a composed-text print data set.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* or *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

AN ENTRY IN AN MCF STRUCTURED FIELD DOES NOT CONTAIN CODE PAGE INFORMATION.

**Explanation:** One of the repeating groups in a Map Coded Font Format 2 (MCF-2) structured field specifies a font character set but no code page information. This error was detected while processing a graphics object within a page or overlay.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.
APK269S • APK271S

User Response: If you created the structured fields for the object, correct the error and resubmit the print request. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the object, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the object with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK269S  A VALUE OF ZERO WAS SPECIFIED AS THE L-UNITS PER UNIT BASE IN THE \textit{structured} field \underline{STRUCTURED FIELD}.

Explanation: Several structured fields specify an L-Units per Unit Base value: Medium Descriptor (MDD), Page Descriptor (PGD), Presentation Text Descriptor (PTD-2), Object Area Descriptor (OBD), Graphics Data Descriptor (GDD), Image Data Descriptor (IDD), Barcode Data Descriptor (BDD), and Image Input Descriptor (IID). The value of zero is not valid for the L-Units per Unit Base.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to \textit{Mixed Object Document Content Architecture Reference} for information about the structured fields. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or resource with the error, verify that the input to that program was valid. If the input was valid, refer to \textit{Mixed Object Document Content Architecture Reference}, \textit{Advanced Function Presentation: Programming Guide and Line Data Reference}, and the appropriate system programming guide for assistance in determining the source of the problem.

APK270S  DATA IN A PAGEDEF RESOURCE IS MISSING: THE PAGEDEF DOES NOT CONTAIN ANY DATA MAPS.

Explanation: The page definition did not specify any data maps and a data map is required to print a data set containing line data.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to \textit{Advanced Function Presentation: Programming Guide and Line Data Reference} for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK271S  DATA IN A FORMDEF RESOURCE IS INVALID: THE DUPLEX SPECIFICATION IN THE PGP STRUCTURED FIELD IS NOT ACCEPTABLE.

Explanation: The duplex specification value in the Page Position (PGP) structured field is not acceptable. The PGP structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to \textit{Mixed Object Document Content Architecture Reference} for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK272S  DATA IN A FORMDEF RESOURCE IS INVALID: THE PGP STRUCTURED FIELD DOES NOT
CONTAIN A PAGE ORIGIN POSITION FOR THE FRONT SIDE OF A SHEET.

Explanation: The Page Position format-2 (PGP) structured field must contain a repeating group that defines the
Page Origin Position for the front side. This value will also be used for the back side of a duplex sheet unless the
PGP structured field contains a repeating group that specifies the Page Origin Position for the back side of the sheet.
The PGP structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the
structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print
request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field.
If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the
structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form
definition with the error, verify that the input to that program was valid. If the input was valid, refer to your
system's diagnosis reference for assistance in determining the source of the problem.

APK273S  DATA IN A FORMDEF RESOURCE IS INVALID: THE CONSTANT FORMS CONTROL VALUE IN
THE MMC STRUCTURED FIELD ID identifier, IS NOT ACCEPTABLE.

Explanation: The Constant Forms Control modification in the Medium Modification Control (MMC) structured field
contained an unsupported value. The MMC structured field is contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the
structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print
request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field.
If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the
structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form
definition with the error, verify that the input to that program was valid. If the input was valid, refer to your
system's diagnosis reference for assistance in determining the source of the problem.

APK274S  DATA IN A FORMDEF RESOURCE IS INVALID: THE MODIFICATIONS SPECIFIED IN THE
MCC STRUCTURED FIELD INCLUDE CONFLICTING CONSTANT FORMS CONTROL VALUES
FOR THE SAME SIDE OF THE SHEET.

Explanation: All Medium Modification Control (MMC) structured fields referenced by the Medium Copy Count
(MCC) structured field must use the same Constant Forms Control value for the same side of a sheet. The MMC and
MCC structured fields are contained in the form definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the
structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print
request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field.
If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the
structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form
definition with the error, verify that the input to that program was valid. If the input was valid, refer to your
system’s diagnosis reference for assistance in determining the source of the problem.

APK275S  DATA IN A FORMDEF RESOURCE IS INVALID: A MEDIUM MAP SPECIFIES ONLY CONSTANT
DATA FOR A PAGE.

Explanation: An attempt was made to process a page using a medium map specifying Constant Forms Control for
both the front and back sides of a duplexed page or for the front side of a simplexed page. Another medium map
must be invoked to allow processing of the remaining line or page data. The Constant Forms Control is contained in
a Medium Modification Control (MMC) structured field. The MMC structured field is contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK276I**  
**DATA IN A FORMDEF RESOURCE IS INVALID: THE OUTPUT BIN SELECTION VALUE IN MMC STRUCTURED FIELD, ID identifier, IS NOT ACCEPTABLE.**

**Explanation:** In the Medium Modification Control (MMC) structured field whose identifier is specified in the message text, the output bin selection parameter value was not valid. The MMC structured field is contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK277I**  
**THE SET OF MODIFICATIONS SPECIFIED IN THE MCC STRUCTURED FIELD INDICATES DIFFERENT OUTPUT BIN VALUES FOR THE FRONT AND BACK SIDES OF A DUPLEX SHEET.**

**Explanation:** The Medium Modification Control (MMC) structured fields referenced by the Medium Copy Count (MCC) structured field repeating groups specify different output bin values along with either tumble or normal duplex. This is an attempt to place the front and back sides of a sheet into different output bins.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK278S**  
**DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: THE MAPPING OPTION SPECIFIED IN THE STRUCTUREDFIELD IS INCORRECT OR UNSUPPORTED.**

**Explanation:** The structured field in error contained an incorrect Mapping Option value or the printer does not support the Mapping Option value. The structured field could be contained in a bar code object, graphics object, image object, or object container object, or it could be an IOB structured field with a bad mapping option triplet. The bar code object, graphics object, image object, or IOB can be contained in an overlay, MO:DCA-P page, or embedded in line data. The graphics object can be contained in a composed-text print data set or an overlay, or embedded in a data set containing line data. The image object can be contained in a composed-text print data set, an overlay, or a page segment, or embedded in a data set containing line data.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.
User Response: If you created the structured fields for the object, correct the error and resubmit the print request. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the object, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the object with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK279I DATA IN A FORMDEF RESOURCE IS INVALID: THE SET OF MODIFICATIONS SPECIFIED IN THE MMC STRUCTURED FIELD, ID identifier, INCLUDES DUPLICATE CONFLICTING VALUES FOR THE keyword KEYWORD.

Explanation: The Medium Modification Control (MMC) structured field contains duplicate conflicting values for the keyword identified in the message text. The MMC structured field is in the form definition.

System Action: ACIF issues this message and continues processing, ignoring the duplicate keyword.

User Response: If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the object with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK280I A FORMDEF RESOURCE REQUESTED A MEDIA EJECT CONTROL TO THE NEXT BACK-SIDE AND DUPLEX=NO WAS SPECIFIED ON THE OUTPUT STATEMENT.

Explanation: When a media eject control to the next back-side is specified in a form definition, the DUPLEX=NO keyword on the OUTPUT statement cannot be used to change from duplex (specified in the form definition) to simplex. The reason is that an incompatible request is being made; you cannot eject to the next back-side when simplexing.

When a media eject control to the next back-side is specified in the form definition and the form definition requests normal or tumble duplex, the only valid option for the duplex keyword is to specify either DUPLEX=NORMAL or DUPLEX=TUMBLE on the OUTPUT statement.

System Action: ACIF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: Resubmit the job without requesting the duplex keyword on the OUTPUT statement.

System Programmer Response: None.

APK299I AN IM IMAGE OBJECT CONTAINS INVALID OR INCORRECT DATA. THE IM IMAGE OBJECT CANNOT BE CONVERTED TO AN IO IMAGE OBJECT.

Explanation: This message is issued when ACIF converts an IM image object to an IO image object and one of the image size values is zero. For a simple IM image object, this message is issued if either the XSize or YSize parameter value of the IID structured field is zero. For a complex IM image object, this message is issued if one of the XCSize, YCSize, XFilSize, or YFilSize parameter values of the ICP structured field is zero.

System Action: ACIF stops processing the input file.

User Response: Correct the error and resubmit the request.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK300I  DATA IN A PAGEDEF RESOURCE IS INVALID: THE NEXT LINE DESCRIPTOR IF SKIPPING
PARAMETER VALUE IN LND STRUCTURED FIELD NUMBER number IS 0.

Explanation: The current record contains a control character that indicates a skip to a Line Descriptor (LND) structured field with a specific channel control. However, the LND structured field identified in this message had a value of 0 in its NEXT LINE DESCRIPTOR IF SKIPPING parameter. The LND structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system's diagnosis reference for assistance in determining the source of the problem.

APK301S  DATA IN A PAGEDEF RESOURCE IS INVALID: THE NEXT LINE DESCRIPTOR IF SKIPPING
PARAMETER VALUE IN LND STRUCTURED FIELD NUMBER number IS parametervalue. THIS EXCEEDS THE LNC STRUCTURED FIELD COUNT VALUE OF parametervalue.

Explanation: In the Line Descriptor (LND) structured field identified in this message, the value of the next LND IF SKIPPING parameter is greater than the total number of LND structured fields in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system's diagnosis reference for assistance in determining the source of the problem.

APK307S  DATA IN A PAGEDEF RESOURCE IS INVALID: IN LND STRUCTURED FIELD NUMBER number,
THE REUSE RECORD FLAG WAS SET BUT THE NEXT LINE DESCRIPTOR IF REUSING DATA
PARAMETER WAS 0.

Explanation: In the Line Descriptor (LND) structured field identified in this message, the Reuse Record flag had a value of B'1', indicating that the data being processed in this LND structured field should be reused and processed. The NEXT LINE DESCRIPTOR IF REUSING DATA parameter should point to the LND structured field used to continue processing. However, the value for the REUSING DATA parameter was X'0000', indicating the end of the chain. The LND structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK309S  DATA IN A PAGEDEF RESOURCE IS INVALID: THE REPEATING GROUP LENGTH PARAMETER VALUE IN CCP STRUCTURED FIELD cepidentifier IS INVALID.

Explanation: The Conditional Processing Control (CCP) structured field has an incorrect value. Either the LENGTH OF REPEATING GROUPS parameter is zero, or the length of the repeating group data is not a multiple of the size specified in that parameter. The CCP structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK310S  DATA IN A PAGEDEF RESOURCE IS INVALID: THE COUNT PARAMETER VALUE IN THE LNC STRUCTURED FIELD WAS 0.

Explanation: The COUNT parameter in the Line Descriptor Count (LNC) structured field had a value of zero. The LNC structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK312S  DATA IN A PAGEDEF RESOURCE IS INVALID: THE SIZE PARAMETER VALUE IN THE FDS STRUCTURED FIELD WAS 0.

Explanation: The SIZE parameter in the Fixed Data Size (FDS) structured field has a value of 0. The FDS structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK314S  DATA IN A PAGEDEF RESOURCE IS INVALID: THE NUMBER OF REPEATING GROUPS PARAMETER VALUE IN CCP STRUCTURED FIELD cepidentifier IS INVALID.

Explanation: The Conditional Processing Control (CCP) structured field has an incorrect value. Either the NUMBER OF REPEATING GROUPS parameter contained in the CCP structured field is zero, or the number of repeating groups does not match the number specified in the parameter. The CCP structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.
APK315S • APK317S

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK315S  DATA IN A PAGEDEF RESOURCE IS INVALID: THE NEXT LINE DESCRIPTOR IF SPACING PARAMETER VALUE IN LND STRUCTURED FIELD NUMBER number IS 0.

Explanation: The logical-record control character indicates that the NEXT LINE DESCRIPTOR IF SPACING parameter should be followed. However, in the Line Descriptor (LND) structured field identified in this message, the NEXT LINE DESCRIPTOR IF SPACING parameter value was zero. The LND structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK316S  DATA IN A PAGEDEF RESOURCE IS INVALID: THE NEXT LINE DESCRIPTOR IF SPACING PARAMETER VALUE IN LND STRUCTURED FIELD NUMBER number IS parametervalue. THIS VALUE IS TOO LARGE.

Explanation: The logical record control character indicates that the NEXT LINE DESCRIPTOR IF SPACING parameter in the Line Descriptor (LND) structured field should be followed. However, in the Line Descriptor (LND) structured field identified in this message, the NEXT LINE DESCRIPTOR IF SPACING parameter value was greater than the total number of line descriptors in the data map. The LND structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK317S  DATA IN A PAGEDEF RESOURCE IS INVALID: THE LENGTH OF COMPARISON STRING PARAMETER VALUE IN CCP STRUCTURED FIELD ccpidentifier IS INVALID.

Explanation: The Conditional Processing Control (CCP) structured field has an incorrect value. Either the LENGTH OF COMPARISON STRING parameter is zero, or the length of the comparison string data does not match the length of a repeating group minus the fixed lengths of the remaining fields of the repeating group. The CCP structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program
to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK319I**  
**DATA IN A PAGEDEF RESOURCE IS NOT VALID: LND, RCD, OR XMD STRUCTURED FIELD NUMBER number HAS A NULL VALUE SPECIFIED IN THE SUPPRESSION TOKEN NAME PARAMETER. A NULL VALUE IS NOT VALID.**

**Explanation:** The SUPPRESSION TOKEN NAME parameter in the Line Descriptor (LND), Record Descriptor (RCD), or XML Descriptor (XMD) structured field in the page definition has a null value. A null value is any value that contains 'XFFFF' in the first two bytes.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK320S**  
**DATA IN A PAGEDEF RESOURCE IS INVALID: THE IDENTIFIER identifier1 SPECIFIED IN THE NEXT CCP IDENTIFIER PARAMETER IN CCP STRUCTURED FIELD identifier2 WAS NOT FOUND.**

**Explanation:** The Conditional Processing Control (CCP) structured field has an incorrect value. The NEXT CONDITIONAL PROCESSING CONTROL IDENTIFIER parameter in the CCP structured field specifies the identifier used to locate a CCP, if the CCP structured fields are chained. The identifier must match a value specified in the CCP IDENTIFIER parameter of another CCP within the same page definition. The identifier specified in the NEXT CCP IDENTIFIER parameter did not match the CCP IDENTIFIER of any CCPs in the page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK321S**  
**DATA IN A PAGEDEF RESOURCE IS INVALID: THE TIMING OF ACTION PARAMETER VALUE value IN CCP STRUCTURED FIELD ccpidentifier IS INVALID.**

**Explanation:** The Conditional Processing Control (CCP) structured field has an incorrect value. The TIMING OF ACTION parameter in one of the repeating groups of the CCP structured field contains an incorrect value. The CCP structured field is contained in the page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK322S DATA IN A PAGEDEF RESOURCE IS INVALID: THE MEDIUM MAP ACTION PARAMETER VALUE value IN CCP STRUCTURED FIELD ccpidentifier IS INVALID.

**Explanation:** The Conditional Processing Control (CCP) structured field has an incorrect value. The MEDIUM MAP ACTION parameter in one of the repeating groups of the CCP structured field contains an incorrect value. The CCP structured field is contained in the page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK323S DATA IN A PAGEDEF RESOURCE IS INVALID: THE DATA MAP ACTION PARAMETER VALUE value IN CCP STRUCTURED FIELD ccpidentifier IS INVALID.

**Explanation:** The Conditional Processing Control (CCP) structured field has an incorrect value. The DATA MAP ACTION parameter in one of the repeating groups of the CCP structured field contains an incorrect value. The CCP structured field is contained in the page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK324S DATA IN A PAGEDEF RESOURCE IS INVALID: THE COMPARISON PARAMETER VALUE value IN CCP STRUCTURED FIELD ccpidentifier IS INVALID.

**Explanation:** The Conditional Processing Control (CCP) structured field has an incorrect value. The COMPARISON parameter in one of the repeating groups of the CCP structured field contains an incorrect value. The CCP structured field is contained in the page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK326S  DATA IN A PAGEDF RESOURCE IS INVALID: THE DATA MAP datamapname SPECIFIED IN THE DATA MAP NAME PARAMETER OF CCP STRUCTURED FIELD ccpidentifier WAS NOT FOUND.

Explanation: The Conditional Processing Control (CCP) structured field has an incorrect value. The DATA MAP NAME parameter in one of the repeating groups of the CCP structured field specifies the token name of a data map used to locate a data map in the page definition. The name must match the value specified in the TOKEN NAME parameter in one of the Begin Data Map (BDM) structured fields in the current page definition. No data map with name datamapname was found in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK327S  DATA IN A PAGEDF RESOURCE IS INVALID: THE NEXT LINE DESCRIPTOR IF REUSING DATA PARAMETER VALUE IN LND STRUCTURED FIELD NUMBER number WILL CAUSE AN INFINITE LOOP.

Explanation: The NEXT LINE DESCRIPTOR IF REUSING DATA parameter in the Line Descriptor (LND) structured field identified in this message caused an infinite-loop condition. The LND structured field is contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK329S  DATA IN A PAGEDF RESOURCE IS INVALID: THE NEXT LINE DESCRIPTOR IF REUSING DATA PARAMETER VALUE IN LND STRUCTURED FIELD NUMBER number IS parametervalue1. THIS EXCEEDS THE LNC STRUCTURED FIELD COUNT VALUE OF parametervalue2.

Explanation: The NEXT LINE DESCRIPTOR IF REUSING DATA parameter in the Line Descriptor (LND) structured field identified in this message has an incorrect value. The value is greater than the COUNT parameter in the Line Descriptor Count (LNC) structured field in the current data map. The LNC and LND structured fields are contained in the page definition.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
**APK330I**  DATA IN A PAGEDEF RESOURCE IS NOT VALID: WHEN THE DATA START POSITION VALUE IS ADDED TO THE DATA LENGTH VALUE IN LND, RCD, OR XMD STRUCTURED FIELD NUMBER number, IT EXCEEDS THE FDS STRUCTURED FIELD SIZE VALUE OF parametervalue.

**Explanation:** The Use Fixed Data flag in byte 0 in the Line Descriptor (LND) structured field, in byte 11 in the Record Descriptor (RCD) structured field, or in byte 1 in the XML Descriptor (XMD) structured field was set to B'1'. This indicates that data from Fixed Data Text (FDX) structured fields is to be added to the data placed within the page by the LND, RCD, or XMD structured field. The FDX, XMD, RCD, and LND structured fields are in the page definition.

The DATA START POSITION parameter in the LND, RCD, or XMD structured field indicates the offset of the first byte of data. The DATA LENGTH parameter specifies how many bytes of FDX are to be placed within the page. This error was caused when these two parameters specified more data than the FDX structured fields contain. The number of bytes of data in the FDX structured fields can be found in the SIZE parameter of the Fixed Data Size (FDS) structured field.

**System Action:** PSF stops processing the current data set, and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**APK334S**  DATA IN A PAGEDEF RESOURCE IS INVALID: THE AMOUNT OF FIXED DATA RECEIVED DID NOT AGREE WITH THE VALUE SPECIFIED IN THE FDS STRUCTURED FIELD SIZE PARAMETER.

**Explanation:** The Fixed Data Text (FDX) structured field contained more bytes of data than what was indicated in the SIZE parameter of the Fixed Data Size (FDS) structured field. The FDS and FDX structured fields are contained in the page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

**APK335S**  DATA IN A PAGEDEF RESOURCE IS INVALID: THE MEDIUM MAP mediummapname SPECIFIED IN THE MEDIUM MAP NAME PARAMETER OF CCP STRUCTURED FIELD ccpidentifier WAS NOT FOUND.

**Explanation:** The Conditional Processing Control (CCP) structured field has an incorrect value. The MEDIUM MAP NAME parameter in one of the repeating groups of the CCP structured field specifies the token name of a medium map used to locate a medium map in the form definition. The name must match the value specified in the TOKEN NAME parameter in one of the Begin Medium Map (BMM) structured fields in the current form definition. No medium map with name mediummapname was found in the form definition. The CCP structured field is contained in the page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.
request. Refer to *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK337I** DATA IN A PAGEDEF RESOURCE IS NOT VALID: IN LND, RCD, OR XMD STRUCTURED FIELD NUMBER *number*, THE CONDITIONAL PROCESSING FLAG WAS SET BUT THE CONDITIONAL PROCESSING CONTROL IDENTIFIER WAS ZERO.

**Explanation:** In the Line Descriptor (LND), Record Descriptor (RCD), or XML Descriptor (XMD) structured field, the Conditional Processing flag had a value of B'1', indicating that the line data to be processed by this LND, RCD, or XMD structured field is to be compared with a value specified in a Conditional Processing Control (CCP) structured field. The CCP IDENTIFIER parameter in the LND, RCD, or XMD structured field is used to find one of the CCP structured fields in the current page definition. This parameter was set to 0, which is not a valid value if the Conditional Processing flag is on. The LND, RCD, XMD, and CCP structured fields are in the page definition.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK339I** DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE IDENTIFIER *identifier* SPECIFIED IN THE CONDITIONAL PROCESSING CONTROL IDENTIFIER PARAMETER IN LND, RCD, OR XMD STRUCTURED FIELD NUMBER *number* WAS NOT FOUND.

**Explanation:** In the Line Descriptor (LND), Record Descriptor (RCD), or XML Descriptor (XMD) structured field, the Conditional Processing flag had a value of B'1', indicating that the line data to be processed by this LND, RCD, or XMD structured field is to be compared with a value specified in a Conditional Processing Control (CCP) structured field. The CCP IDENTIFIER parameter in the LND, RCD, or XMD structured field is used to find one of the CCP structured fields in the current page definition. However, the identifier specified in the LND, RCD, or XMD structured field identified in this message does not match the value specified in the CCP IDENTIFIER parameter in any of the CCP structured fields in the current page definition. The LND, RCD, XMD, and CCP structured fields are in the page definition.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.
APK340I  DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE NEXT LINE DESCRIPTOR IF CONDITIONAL PROCESSING PARAMETER VALUE IN LND, RCD, OR XMD STRUCTURED FIELD NUMBER number IS value1. THIS EXCEEDS THE LNC STRUCTURED FIELD COUNT VALUE OF value2.

Explanation:  The NEXT LINE DESCRIPTOR IF CONDITIONAL PROCESSING parameter in the Line Descriptor (LND), Record Format Descriptor (RCD), or XML Descriptor (XMD) structured field has an incorrect value. The value is greater than the COUNT parameter in the Line Descriptor Count (LNC) structured field in the current data map. The LNC, LND, RCD, and XMD structured fields are contained in the page definition.

System Action:  ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response:  If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response:  If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK341S  DATA IN A PAGEDEF RESOURCE IS INVALID: IN LND STRUCTURED FIELD NUMBER number, THE SHIFT-OUT CODED FONT LOCAL IDENTIFIER WAS NON-ZERO BUT THE GENERATE FONT CHANGE FLAG WAS NOT SET.

Explanation:  In the Line Descriptor (LND) or Record Descriptor (RCD) structured field identified in this message, the Shift-Out Coded Font Identifier was non-zero. The Generate Font Change flag should be set to indicate that the Primary Coded Font Local Identifier should be used whenever a shift-in code is processed. However, the Generate Font Change flag had a value of B'0'. The LND or RCD structured field is contained in the page definition.

System Action:  PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response:  If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response:  If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK342I  DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE NEXT LINE DESCRIPTOR IF CONDITIONAL PROCESSING PARAMETER VALUE IN LND, RCD, OR XMD STRUCTURED FIELD NUMBER number WILL CAUSE AN INFINITE LOOP.

Explanation:  The NEXT LINE DESCRIPTOR IF CONDITIONAL PROCESSING parameter in the Line Descriptor (LND), Record Format Descriptor (RCD), or XML Descriptor (XMD) structured field caused an infinite-loop condition. The LND, RCD, and XMD structured fields are in the page definition.

System Action:  ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response:  If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response:  If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

</table>
defining with the error, verify that the input to that program was valid. If the input was valid, refer to *Advanced
Function Printing: Diagnosis Guide* for assistance in determining the source of the problem.

**APK350S** DATA IN A PAGEDEF RESOURCE IS INVALID: IN LND STRUCTURED FIELD NUMBER *number*,
THE SHIFT-OUT CODED FONT LOCAL IDENTIFIER WAS NON-ZERO BUT THE GENERATE
FONT CHANGE FLAG WAS NOT SET.

**Explanation:** In the Line Descriptor (LND) or Record Descriptor (RCD) structured field identified in this message,
the Shift-Out Coded Font Identifier was non-zero. The Generate Font Change flag should be set to indicate that the
Primary Coded Font Local Identifier should be used whenever a shift-in code is processed. However, the Generate
Font Change flag had a value of B'0'. The LND or RCD structured field is contained in the page definition.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing
environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print
request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming
Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the
error might be an ACIF logic error. If you used a program to create the structured fields for the page definition,
contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page
definition with the error, verify that the input to that program was valid. If the input was valid, refer to your
system’s diagnosis reference for assistance in determining the source of the problem.

**APK352I** DATA IN A PAGEDEF RESOURCE IS NOT VALID: BAR CODE GENERATION WAS REQUESTED
ON LND, RCD, OR XMD STRUCTURED FIELD NUMBER *number*, BUT THE PRINTER DOES
NOT SUPPORT BAR CODE OBJECTS.

**Explanation:** A Line Descriptor (LND), Record Descriptor (RCD), or XML Descriptor (XMD) structured field in a
page definition has requested PSF to generate a bar code object from the line data, but the printer does not support
bar code objects.

**System Action:** PSF ignores the request and continues processing the data set.

**User Response:** To print the data set and have PSF generate bar code objects, submit the print job to a printer that
supports bar code objects. For more information about AFP printers that support bar code objects, refer to *AFP:
Printer Information*.

**System Programmer Response:** If the page definition is for a separator page, the message data set, or the default
page definition for the user print data sets defined in the PSF startup procedure, delete the option from the page
definition that requests that a bar code be generated.

**APK353S** DATA IN A PAGEDEF RESOURCE IS INVALID: THE DATA LENGTH PARAMETER VALUE IN
LND STRUCTURED FIELD NUMBER *number* DOES NOT MATCH THE LENGTH OF
COMPARISON STRING PARAMETER VALUE IN CCP STRUCTURED FIELD *ccpidentifier*.

**Explanation:** In the Line Descriptor (LND) structured field, the value of the DATA LENGTH parameter is used in
identifying the field of the current input record for which conditional processing is to performed. This field is to be
compared with the Comparison String specified in the Conditional Processing Control (CCP) structured field. The
length specified in the DATA LENGTH parameter in the LND structured field does not match the length specified in
the LENGTH OF COMPARISON STRING parameter of the CCP structured field. The LND and CCP structured fields
are contained in the page definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the
structured field in the data stream or resource.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print
request. Refer to *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about
the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program
to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page
definition with the error, verify that the input to that program was valid. If the input was valid, refer to your
system’s diagnosis reference for assistance in determining the source of the problem.
APK355S DATA IN A PAGedef RESOURCE IS INVALID: A PAGE OVERLAY WAS REQUESTED IN LND OR RCD STRUCTURED FIELD, BUT THE PRINTER DOES NOT SUPPORT PAGE OVERLAYS.

Explanation: An overlay has been requested by a Line Descriptor (LND) or Record Descriptor (RCD) structured field within the page definition, but the printer does not support page overlays.

System Action: PSF terminates the page and continues processing the data set.

User Response: To print the data set containing the page overlay, submit the print job to a printer that supports page overlays. For more information about AFP printers that support page overlays, refer to AFP: Printer Information.

System Programmer Response: If the page definition is for a separator page, the message data set, or the default page definition for the user print data sets defined in the PSF startup procedure, delete the page overlay from the page definition.

APK356S DATA IN A PAGedef RESOURCE IS INVALID: A PAGE SEGMENT OR OVERLAY WAS REQUESTED IN THE LND OR RCD STRUCTURED FIELD, BUT THE INLINE OR BASELINE POSITION VALUES WERE SPECIFIED FOR THE LND OR RCD.

Explanation: If any resource object-include triplets are specified in the LND structured field, bits 2 and 3 of bytes 0–1 in the LND structured field must both be set. If any resource object-include triplets are specified in the RCD structured field, bits 2 and 3 of bytes 11–13 in the RCD structured field must both be set.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment in which an error occurred.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK359I AN INLINE MEDIUM MAP WAS ENCOUNTERED IN THE DATASET, BUT INLINE MEDIUM MAPS ARE NOT SUPPORTED.

Explanation: A Begin Medium Map (BMM) structured field was encountered in the data stream after resources for the data set had been processed. ACIF does not support inline medium maps between pages. The data set might have been created by a program that creates inline medium maps, but a data set that contains inline medium maps cannot be printed.

System Action: ACIF stops processing the print data set.

User Response: Correct the error and resubmit the request.

System Programmer Response: See the I/O error message to determine an appropriate action.

APK364I THE SET OF MODIFICATIONS SPECIFIED IN THE MCC STRUCTURED FIELD INDICATES DIFFERENT SELECT INPUT SOURCE VALUES FOR THE FRONT AND BACK SIDES OF A DUPLEX SHEET.

Explanation: The Medium Modification Control (MMC) structured field referenced by the Medium Copy Count (MCC) structured field repeating groups specify different input source or media type local ID values, along with either tumble or normal duplex. This is an attempt to print the front and back sides of a sheet from different input bins.

System Action: The form definition containing the error is not used, and one of these occurs:

• If the error is in the default form definition, or a form definition specified for printing messages or separator pages, PSF is not started.
If the error is in a form definition specified on the user’s OUTPUT JCL statement, PSF cannot begin printing the data set; it tries to print the next data set. PSF issues a message identifying the position of the structured field in the form definition. PSF issues additional messages identifying the processing environment when the error was found.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK366I**  DATA IN AN INPUT RECORD OR PAGEDEF RESOURCE IS NOT VALID: THE ORIENTATION USED WITH RELATIVE POSITIONING IS DIFFERENT THAN THE LAST ORIENTATION USED FOR PRINTING. THE PRIOR AND CURRENT LND, RCD, OR XMD STRUCTURED FIELD NUMBERS ARE: priornumber AND currentnumber.

**Explanation:** When relative positioning is being used on a Line Descriptor (LND), Record Descriptor (RCD), or XML Descriptor (XMD) structured field, the text orientation field of the current LND, RCD, or XMD (currentnumber) must match the text orientation field of the LND, RCD, or XMD (prior number) that was last used for positioning data. The prior LND, RCD, or XMD position defines the baseline position from which the relative offset of the current LND, RCD, or XMD is measured.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment in which the error occurred.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK367I**  DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE OUTPUT OPTION SPECIFIED IN AN IOB STRUCTURED FIELD WITH RESOURCE LOCAL ID identifier IS NOT VALID OR IS UNSUPPORTED. THE IOB IS INCLUDED WITH LND, RCD, OR XMD STRUCTURED FIELD NUMBER number.

**Explanation:** The Include Object (IOB) structured field in error contained an Output Option value that is not valid, or the printer does not support the Output Option value. The IOB is included using the Line Descriptor (LND), Record Descriptor (RCD), or XML Descriptor (XMD) structured field identified in this message. The IOB, LND, RCD, and XMD structured fields are contained in the page definition.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment in which an error occurred.

**User Response:** If you created the structured fields for the resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK368S  DATA IN A PAGEDEF RESOURCE IS INVALID: THE RESOURCE LOCAL ID identifier SPECIFIED IN THE EXTENDED RESOURCE LOCAL ID TRIPLET ON LND STRUCTURED FIELD NUMBER number WAS NOT FOUND.

Explanation: In the Line Descriptor (LND) or Record Descriptor (RCD) structured field, and Extended Resource Local Identifier triplet specifies a local ID (identifier) of an Include Object (IOB) structured field that is to be used to include an object when this LND or RCD is used for printing. The identifier specified on the LND or RCD does not match any of the IOB structured fields in the page definition.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment in which an error occurred.

User Response: If you created the structured fields for the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APP368S  DATA IN AN INPUT RECORD IS NOT VALID; A structuredfield STRUCTURED FIELD IS ATTEMPTING TO INCLUDE A NON-PRESENTATION OBJECT CONTAINER.

Explanation: The Object Classification triplet (X'10') on a structured field is requesting a non-presentation object as the object class. Only presentation objects are allowed to be included through this structured field.

System Action: PSF stops processing the current page.

PSF attempts to find the end of the current page and to resume printing on the next page. If unable to find the end of the page, PSF stops printing the data set. If this error occurs in a resource, PSF stops processing the data set.

If this error occurs in a resource environment group, PSF stops processing the resource environment group and continues processing the data set.

User Response:

System Programmer Response:

APK380S  THE REGISTRATION ID (identifier) OF AN OBJECT CONTAINER RESOURCE, NAME resourcename OR OBJECT OID objectoid, DOES NOT MATCH THE CORRESPONDING REGISTRATION ID FOR THE INVOKING JCL KEYWORD OR STRUCTURED FIELD.

Explanation: An object container resource was requested through a JCL keyword or an IOB or MDR structured field, but the object classification triplet in the Begin Object Container structured field did not have the corresponding registration ID. For a list of registration IDs and their assumed functions, refer to Mixed Object Document Content Architecture Reference. A value of *** means that the resource name or object OID was not specified.

System Action: If the object container was called out by JCL, PSF stops processing the current data set and issues additional messages that identify the processing environment in which an error occurred. If the object container was included by an IOB or MDR structured field, PSF terminates the page or overlay. PSF attempts to locate the end of the current page and resume processing on the next page. If the end of the current page cannot be located, PSF stops printing the data set.

User Response: If you created the structured fields for the object container resource, ensure that the registration ID corresponds to the keyword used to invoke the resource or the registration ID specified in the object classification triplet specified on the IOB or MDR structured field.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the object container that contains the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.
APK381S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE REGISTERED OBJECT ID IN THE OBJECT CLASSIFICATION TRIPLET ON A <structuredfield> STRUCTURED FIELD IS NOT SPECIFIED.

Explanation:  The registered object ID is 0 in the object classification triplet. Object containers require a registered ID to be specified.

System Action:  If the structured field is included in an object embedded in a page or overlay, or the structured field is in a resource included by a page or overlay, PSF terminates the page or overlay. PSF attempts to locate the end of the current page and resume processing on the next page. If the end of the current page cannot be located, PSF stops printing the data set. For non-presentation object containers, PSF stops printing the data set.

If the error is contained in a page definition, PSF terminates processing of the data set and continues processing with the next data set. PSF issues a message that identifies the position of the structured field in the input data stream or resource. PSF issues additional messages identifying the processing environment in which the error occurred.

User Response:  If you created the structured fields, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no errors, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response:  If an IBM licensed program was used to create the structured field with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK384S  DATA IN A FORMDEF RESOURCE IS INVALID: THE SET OF MODIFICATIONS SPECIFIED IN THE MCC STRUCTURED FIELD INCLUDES CONFLICTING PRESENTATION SYSTEM SETUP ID VALUES.

Explanation:  Multiple MMC structured fields referenced by the MCC structured field do not use the exact same set of Presentation System Setup ID values.

System Action:  ACIF stops processing the print data set.

User Response:  If you created the structured fields for the form definition, correct the MCC structured field. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the MCC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response:  If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK385S  DATA IN A FORMDEF RESOURCE IS INVALID: THE MODIFICATIONS SPECIFIED IN THE MMC STRUCTURED FIELD <structuredfield> INCLUDE UNPAIRED keyword1 AND keyword2 KEYWORDS.

Explanation:  The keywords must be paired in the Medium Modification Control (MMC) structured field. This form definition has one or the other keyword but not both, or the keyword pairs are not adjacent. The MMC structured field is contained in the form definition.

System Action:  The form definition containing the error is not used, and one of these occurs:

- PSF is not started if the form definition containing the error is defined in the PSF startup procedure. The form definition resources defined in the PSF startup procedure are for separator pages, for the message data set, and for the default form definition resource for user print data sets.
- If the error is in a form definition specified on the user’s OUTPUT JCL statement, PSF cannot begin printing the data set; it tries to print the next data set. PSF issues a message identifying the position of the structured field in the form definition. PSF issues additional messages identifying the processing environment when the error was found.

User Response:  If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field.
If the structured field has no error, the error might be an PSF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system's diagnosis reference for assistance in determining the source of the problem.

---

**APK386S**  
**DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: A REQUIRED TRIPLET with ID identifier WAS MISSING FROM AN IOB STRUCTURED FIELD.**

**Explanation:** When identifier is:

- **X'4C'** The x- or y-axis origin for object content or an object area size (X'4C') triplet was specified on an IOB, but no measurement unit (X'4B') triplet was specified. The structured field is contained in a print data set or overlay.

- **X'22'** The Extended Resource Local Identifier (X'22') triplet is required when the IOB structured field is contained in a page definition.

**System Action:** If the error is contained in a page definition, PSF terminates processing of the data set and continues processing with the next data set. Otherwise, PSF terminates the page or overlay containing the structured field in error. PSF attempts to locate the end of the current page and resumes processing on the next page. If the end of the current page cannot be located, PSF stops printing the data set. PSF issues a message identifying the position of the structured field in the input data stream or resource. PSF issues additional messages identifying the processing environment when the error was found.

**User Response:** If you placed the IOB structured field in the print data set or overlay, correct the error and resubmit the ACIF job. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If you used a program to place the IOB structured field in the print data set or overlay, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to place the IOB structured field in the print data set or overlay, verify that the input to that program was valid. If the input was valid, refer to your system's diagnosis reference for assistance in determining the source of the problem.

---

**APK387S**  
**DATA IN AN INPUT RECORD IS INVALID: A PARAMETER IN AN IOB STRUCTURED FIELD CONTAINS UNACCEPTABLE DATA.**

**Explanation:** One of the parameters in the Include Object (IOB) structured field is not valid. The object type specified is not supported or is not valid or the x or y offset of the object area or the rotation value are not explicitly specified when the reference coordinate system is set to X'00'. The IOB structured field is contained in the print data set or an overlay.

**System Action:** ACIF stops processing the input data set.

**User Response:** If you placed the IOB structured field in the input data set or overlay, correct the error and resubmit the ACIF job. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If you used a program to place the IOB structured field in the print data set or overlay, contact your system programmer.

**System Programmer Response:** No response is necessary.

---

**APK388S**  
**DATA IN A PAGE SEGMENT IS INVALID: structuredfield STRUCTURED FIELD IS NOT ALLOWED IN A PAGE SEGMENT INCLUDED WITH AN IOB.**

**Explanation:** Only MO:DCA-P page segments are allowed to be included with an IOB structured field. MO:DCA-P page segments cannot contain IM1 image or PTOCA data.

**System Action:** ACIF stops processing the input data set.

**User Response:** If you placed the IOB structured field in the input data set or overlay, correct the error and resubmit the ACIF job. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If you used a program to place the IOB structured field in the print data set or overlay, contact your system programmer.

**System Programmer Response:** No response is necessary.
APK389S • APK392I

APK389S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE FONT RESOLUTION AND METRIC TECHNOLOGY TRIPLET SPECIFIES AN INCORRECT VALUE.

Explanation: There is an incorrect value specified for the metric technology, the unit base, or the units per unit base field in the Font Resolution and Metric Technology triplet (X’84’). The triplet is specified on a Map Coded Font (MCF) structured field, which can be in an input data set or overlay.

System Action: ACIF stops processing the print data set.

User Response: If you created the structured fields for the print data set or the resource, correct the error and resubmit the job to ACIF. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK390S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: THE STRUCTURED FIELD CONTAINS A triplet TRIPLET THAT HAS AN INVALID VALUE. THE INVALID VALUE STARTS IN BYTE byte OF THE TRIPLET.

Explanation: An incorrect value was specified for a field that starts in byte offset of the triplet identified in this message. The triplet is specified on the structured field identified in this message.

System Action: If the error occurred in a form definition, a page definition, or a non-presentation object container resource (for example, COMSETUP), the form definition, page definition, or non-presentation object container resource is not used, and one of these occurs:

- PSF is not started for any of these:
  - The default form definition
  - A form definition specified for printing messages or separator pages
  - A page definition specified for printing messages or separator pages
- PSF cannot begin printing the data set for a form definition or non-presentation object container resource (or page definition if printing line date) specified on a user’s OUTPUT JCL statement; PSF tries to print the next data set. If the error occurred in a structured field in a page or another type of resource, PSF attempts to find the end of the page or resource. If PSF can find the end of the page or resource, it prints any data accumulated for the current page. If PSF cannot find the end of the page or resource, the data set is terminated.

PSF issues a message identifying the position of the structured field in the data stream or resource. PSF issues additional messages identifying the processing environment in which the error occurred.

User Response: If you created the structured fields for the object, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the object, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK392I  DATA IN A FORMDEF RESOURCE IS INVALID: THE SCOPE OF THE MFC IS scope BUT structuredfield IS THE STRUCTURED FIELD THAT BOUNDS THE MFC.

Explanation: Either a document environment group or a medium map in the current form definition contains a Medium Finishing Control (MFC) structured field with an incorrect value specified for the scope.

System Action: The MFC is ignored and processing continues. ACIF issues additional messages identifying the processing environment in which the error occurred.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference or Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the
error might be an ACIF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

---

**APK393I**  
THE INPUT BIN SPECIFIED IN THE MMC STRUCTURED FIELD OR ON THE OUTPUT STATEMENT IS AN INSERTER BIN AND IS DISABLED. AN ALTERNATIVE BIN WAS SUBSTITUTED.

**Explanation:** The Medium Modification Control (MMC) structured field or the output statement requested an input bin that is supported by the printer but is disabled. This bin is an inserter bin. The MMC structured field is contained in the form definition. The output statement is in the JCL.

**System Action:** ACIF continues processing, selecting paper from an alternative bin. The inserter pages are blank sheets from the alternative bin.

**User Response:** If the output is not acceptable, submit the print request to a printer that has the specified bin available, or ensure that the bin is enabled on the original printer before resubmitting the print request.

**System Programmer Response:** No response is necessary.

---

**APK395I** A FORMDEF RESOURCE REQUESTED A MEDIA EJECT CONTROL TO THE NEXT BACK-SIDE AND DUPLEX=NO WAS SPECIFIED ON THE OUTPUT STATEMENT.

**Explanation:** When a media eject control to the next back-side is specified in a form definition, the DUPLEX=NO keyword on the OUTPUT statement cannot be used to change from duplex (specified in the form definition) to simplex. The reason is that an incompatible request is being made; you cannot eject to the next back-side when simplex printing.

When a media eject control to the next back-side is specified in the form definition and the form definition requests normal or tumble duplex, the only valid option for the duplex keyword is to specify either DUPLEX=NORMAL or DUPLEX=TUMBLE on the OUTPUT statement.

**System Action:** ACIF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** Resubmit the job without requesting the duplex keyword on the OUTPUT statement.

**System Programmer Response:** None.

---

**APK396I** DATA IN A FORMDEF RESOURCE IS INVALID: THE OUTPUT BIN SELECTION VALUE IN MMC STRUCTURED FIELD, ID identifier, IS NOT ACCEPTABLE.

**Explanation:** In the Medium Modification Control (MMC) structured field whose identifier is specified in the message text, the output bin selection parameter value was not valid. The MMC structured field is contained in the form definition.

**System Action:** ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.
APK397I  THE SET OF MODIFICATIONS SPECIFIED IN THE MCC STRUCTURED FIELD INDICATES DIFFERENT OUTPUT BIN VALUES FOR THE FRONT AND BACK SIDES OF A DUPLEX SHEET.

Explanation: The Medium Modification Control (MMC) structured fields referenced by the Medium Copy Count (MCC) structured field repeating groups specify different output bin values along with either tumble or normal duplex. This is an attempt to place the front and back sides of a sheet into different output bins.

System Action: ACIF stops processing the print data set and issues a message identifying the position of the structured field in the data stream or resource.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK398I  DATA IN A FORMDEF RESOURCE IS INVALID: THE SET OF MODIFICATIONS SPECIFIED IN THE MMC STRUCTURED FIELD, ID identifier, INCLUDES DUPLICATE CONFLICTING VALUES FOR THE keyword KEYWORD.

Explanation: The Medium Modification Control (MMC) structured field contains duplicate conflicting values for the keyword identified in the message text. The MMC structured field is in the form definition.

System Action: ACIF issues this message and continues processing, ignoring the duplicate keyword.

User Response: If you created the structured fields for the form definition, correct the MMC structured field and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the MMC has no errors, the error might be an ACIF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the object with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

APK400S  THE parameter NUMBER VALUE IS NOT NUMERIC.

Explanation: A numeric value must be specified after the parameter.

System Action: ACIF terminates.

User Response: Use a numeric value after the parameter and resubmit the job.

System Programmer Response: No response is necessary.

APK401S  THE parameter NAME MUST BE DELIMITED WITH QUOTES.

Explanation: The attribute name of the parameter must begin and end with single quotes.

System Action: ACIF terminates.

User Response: Use single quotes before and after the attribute name in the parameter.

System Programmer Response: No response is necessary.

APK402S  THE PARAMETER parameter IS INVALID.

Explanation: A parameter that is not valid for ACIF was specified.

System Action: ACIF terminates.

User Response: Correct the parameter and resubmit the job.

System Programmer Response: No response is necessary.
APK403S THE REQUESTED RESOURCE number IS UNKNOWN.

Explanation: A resource I/O has been requested, but the resource type is unknown to ACIF. This condition is caused by an ACIF logic error. The resource type codes are listed below:

<table>
<thead>
<tr>
<th>Type</th>
<th>Resource</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Print input file</td>
</tr>
<tr>
<td>2</td>
<td>FORMDEF file</td>
</tr>
<tr>
<td>3</td>
<td>PAGEDEF file</td>
</tr>
<tr>
<td>4</td>
<td>OVERLAY file</td>
</tr>
<tr>
<td>5</td>
<td>SEGMENT file</td>
</tr>
<tr>
<td>6</td>
<td>Coded FONT file</td>
</tr>
<tr>
<td>7</td>
<td>Coded PAGE file</td>
</tr>
<tr>
<td>8</td>
<td>FONT Character Set file</td>
</tr>
<tr>
<td>9</td>
<td>FONT Metric file</td>
</tr>
<tr>
<td>10</td>
<td>FONT Shape file</td>
</tr>
<tr>
<td>20</td>
<td>Print output file</td>
</tr>
<tr>
<td>21</td>
<td>Messages output file</td>
</tr>
<tr>
<td>22</td>
<td>SPOOL file</td>
</tr>
<tr>
<td>23</td>
<td>Dummy input file</td>
</tr>
<tr>
<td>24</td>
<td>Dummy output file</td>
</tr>
<tr>
<td>25</td>
<td>Parameter file</td>
</tr>
<tr>
<td>26</td>
<td>Resource Object file</td>
</tr>
</tbody>
</table>

System Action: ACIF terminates.

User Response: Contact IBM Service.

System Programmer Response: No response is necessary.

APK404S THE ATTRIBUTE NAME USED IN indexn HAS AN IMPROPER USE OF QUOTES.

Explanation: An unpaired set of quotes was found in the attribute name for an INDEXn parameter.

System Action: ACIF terminates.

User Response: Correct the INDEXn parameter and resubmit the job.

System Programmer Response: No response is necessary.

APK405S A VALUE OF value IS INVALID FOR PARAMETER parameter.

Explanation: The value supplied for a parameter is not valid.

System Action: ACIF terminates.

User Response: Correct the parameter value and resubmit the job.

System Programmer Response: No response is necessary.

APK406S PARAMETER parameter HAS TOO MANY DATA SETS SPECIFIED.

Explanation: More than eight data sets have been supplied for the parameter.

System Action: ACIF terminates.

User Response: Correct the number of data sets and resubmit the job.

System Programmer Response: No response is necessary.

APK407S A RESTYPE PARAMETER OF value IS NOT VALID.

Explanation: A resource type of NONE was found with another value in the RESTYPE parameter. Examples of other values are: FONT, OVLY, FDEF, or PSEG. A resource type of NONE cannot be specified with another value.

System Action: ACIF terminates.

User Response: Correct the RESTYPE parameter and resubmit the job.
**APK408S • APK411S**

**System Programmer Response:** No response is necessary.

---

**APK408S**  
A VIRTUAL STORAGE REQUEST WAS UNSUCCESSFUL - REQUEST SIZE `storagerequestsize`  
RETURN CODE `returncode`.

**Explanation:** A GETMAIN macro made an unsuccessful attempt to obtain virtual storage. This message indicates the storage size and the return code from the system GETMAIN macro.

**System Action:** ACIF terminates.

**User Response:** Increase the REGION size and resubmit the job.

**System Programmer Response:** To interpret the GETMAIN return code, refer to the documents about application development macros for your operating system.

---

**APK409S**  
A DDNAME FOR `parameter` WAS NOT SUPPLIED. `default` WAS USED.

**Explanation:** No DD name was specified for either the MSGDD or the PARMDD parameter.

**System Action:** If the missing DD name was MSGDD, the DD name assigned to SYSPRINT was used. If the missing DD name was PARMDD, the DD name assigned to SYSIN was used.

**User Response:** If the DD name used was not acceptable, specify a DD name for the parameter and submit the job again.

**System Programmer Response:** No response is necessary.

---

**APK410S**  
AN ACIF STORAGE REQUEST WAS UNSUCCESSFUL - REQUEST SIZE `storagerequestsize`  
REQUEST TYPE `requesttype` RETURN CODE `returncode`.

**Explanation:** An unsuccessful attempt has been made to obtain or free ACIF subpool storage. This error message returns the following information:
- Storage request size
- Request type
- Return code

**System Action:** ACIF terminates.

**User Response:** No response is necessary.

**System Programmer Response:** Use the information provided in the message to correct the error and resubmit the job.

---

**APK411S**  
AN ERROR OCCURRED WHILE ATTEMPTING TO `action` THE DDNAME `ddname`, RETURN CODE `returncode`.

**Explanation:** The file I/O macro made an unsuccessful attempt to read from, write to, or close the named DD. The return codes are:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>

System Action: None; this message is for information only.

User Response: See the accompanying message to determine a response.

System Programmer Response: No response is necessary.
APK415I  parameter = value.

Explanation:  For this run, the parameter listed has been used with the associated value.

System Action:  None.

User Response:  No response is necessary.

System Programmer Response:  No response is necessary.

APK416I  THESE PATHS HAVE BEEN SPECIFIED FOR {libraryname}.

Explanation:  This message is issued before message APK417I and shows the resource type the data set or file type is specified for.

System Action:  None.

User Response:  No response is necessary.

System Programmer Response:  No response is necessary.

APK417I  PATH:{name}

Explanation:  This message follows APK416I and lists the name of the data set or file type for a particular resource type.

System Action:  None.

User Response:  No response is necessary.

System Programmer Response:  No response is necessary.

APK418S  THE MAXIMUM RECORD ID WAS EXCEEDED.

Explanation:  The current job contains more than 999999999 documents.

System Action:  ACIF terminates.

User Response:  Break the job up into a smaller number of documents.

System Programmer Response:  No response is necessary.

APK419S  USER {exittype} EXIT {programname} RETURNED CODE {returncode}.

Explanation:  An input, output, or resource user exit program has returned a non-zero return code.

System Action:  ACIF terminates.

User Response:  Correct the error in the exit program and resubmit the job.

System Programmer Response:  No response is necessary.

APK420S  AN ERROR OCCURRED WHILE ATTEMPTING TO OPEN "{dataset}" RETURN CODE {returncode}.

Explanation:  An attempt to open a data set failed. This message is informational and further action takes place in higher level modules if required.

Return Code

System Action: ACIF terminates.
User Response: Use the information provided in the return code to correct the problem.
System Programmer Response: No response is necessary.
APK424I  PARAMETER 'RESFILE=PDS' IS ONLY VALID UNDER MVS, DEFAULTING TO 'RESFILE=SEQ'.

Explanation: The supplied value for the RESFILE parameter is valid only for OS/390 and MVS; it is incorrect for the AIX, Windows NT®, VM, or VSE operating system.

System Action: ACIF produces a sequential resource file.

User Response: No response is necessary.

System Programmer Response: No response is necessary.

APK425S  USER type EXIT program WAS NOT FOUND.

Explanation: The input, output, or resource user exit program named on the exit’s DD parameter does not exist.

System Action: ACIF terminates.

User Response: Correct your exit program and resubmit the job.

System Programmer Response: No response is necessary.

APK426S  PARAMETER MISMATCH: RESTYPE type SPECIFIED, BUT NO SUPPORTING LIBRARY DEFINITIONS WERE SUPPLIED.

Explanation: The resource type type was specified on the RESTYPE parameter, but no DD parameter for that resource type was supplied in the ACIF parameter file.

System Action: ACIF terminates.

User Response: Correct the parameters and resubmit the job.

System Programmer Response: No response is necessary.

APK427I  AN ERROR OCCURRED WITH FILEDEF filename, RETURN CODE = rc, THE DEFAULT OF filename filetype filemode FOR ddname WILL BE USED.

Explanation: An incorrect filename was supplied. The defaults listed are used instead.

System Action: ACIF continues.

User Response: No response is necessary.

System Programmer Response: No response is necessary.

APK428S  A resource HAS BEEN REQUESTED, BUT NO NAME WAS GIVEN.

Explanation: The resource listed in the message was requested to be handled by ACIF, but the name to get was not passed to ACIF. This condition is caused by an ACIF logic error.

System Action: ACIF terminates.

User Response: Contact IBM Service.

System Programmer Response: No response is necessary.

APK435W  THE ddname DD STATEMENT SPECIFIED FOR parameter IS MISSING.

Explanation: An ACIF DD parameter specified a DD name that was not specified in the JCL (OS/390 or VSE) or FILEDEF statement (VM).

System Action: ACIF terminates.

User Response: Ensure that the ACIF parameter specifies a DD name that is defined in the job commands.

System Programmer Response: No response is necessary.
APK436S • APK442S

APK436S  THE GROUPNAME VALUE value IS NOT WITHIN THE ALLOWABLE RANGE.
Explanation: ACIF processing has encountered the GROUPNAME parameter with an incorrect INDEX number specified. The INDEXn range is 1–8.
System Action: ACIF terminates.
User Response: Correct the resource and resubmit the job.
System Programmer Response: No response is necessary.

APK437S  'TYPE=FLOAT' MAY NOT BE SPECIFIED FOR TRIGGER1.
Explanation: The 'TYPE=FLOAT' subparameter is not valid for TRIGGER1.
System Action: ACIF terminates.
User Response: Correct the parameter and rerun ACIF.
System Programmer Response: No response is necessary.

APK438S  THE VALUE SPECIFIED FOR parameter1 CONFLICTS WITH THE VALUE SPECIFIED FOR parameter2.
Explanation: The value specified for the first parameter conflicts with the value specified for the second parameter.
System Action: ACIF terminates.
User Response: Correct the parameters and rerun ACIF.
System Programmer Response: No response is necessary.

APK440I  ACIF AT <APAR#> HAS COMPLETED NORMALLY WITH A RETURN CODE 0.
Explanation: ACIF processing has completed with a return code of zero. The message includes the current APAR number. For example: ACIF at PQ63028 has completed normally with a Return Code 0.
System Action: This message is for information only.
User Response: See any accompanying messages to determine a response.
System Programmer Response: No response is necessary.

APK441I  ACIF AT <APAR#> HAS COMPLETED ABNORMALLY WITH A RETURN CODE 4.
Explanation: ACIF processing has completed with a return code of four. The message includes the current APAR number. For example: ACIF at PQ63028 has completed abnormally with a Return Code 4. A return code of four is a warning; processing continues.
System Action: This message is for information only.
User Response: See any accompanying messages to determine a response.
System Programmer Response: No response is necessary.

APK442S  ACIF HAS BEEN INVOKED WITHOUT ANY PARAMETERS.
Explanation: ACIF needs a minimum number of parameters in order to function.
System Action: ACIF terminates.
User Response: Specify the INPUTDD, FORMDEF, CC, and PAGEDEF parameters.
System Programmer Response: No response is necessary.
A BEGIN COLUMN SPECIFICATION FOR FIELD\textit{n} IS $\leq 0$. SUCH A SPECIFICATION IS ONLY VALID WHEN (BASE=TRIGGER) IS ALSO SPECIFIED.

**Explanation:** FIELD\textit{n} was specified with a column offset less than or equal to zero, but (BASE=TRIGGER) was not also specified. Negative column offsets in a FIELD specification are only valid when (BASE=TRIGGER) is also specified.

**System Action:** ACIF terminates.

**User Response:** Correct the ACIF FIELD\textit{n} parameter specification and resubmit the job.

**System Programmer Response:** No response is necessary.

MULTIPLE COLUMNS WERE SPECIFIED FOR FIELD\textit{n} WHICH IS DEFINED WITH (BASE=TRIGGER). ONLY ONE COLUMN MAY BE SPECIFIED WHEN A FIELD IS DEFINED WITH (BASE=TRIGGER).

**Explanation:** FIELD\textit{n} was specified with multiple columns and (BASE=TRIGGER). Only one column can be specified for a field that is also specified with (BASE=TRIGGER).

**System Action:** ACIF terminates.

**User Response:** Correct the ACIF FIELD\textit{n} parameter specification and resubmit the job.

**System Programmer Response:** No response is necessary.

INDEX\textit{n} WHICH IS DEFINED AS EITHER (TYPE=PAGERANGE) OR (TYPE=GROUPRANGE) INCLUDES FIELD\textit{n} WHICH IS DEFINED AS (BASE=TRIGGER). THIS COMBINATION IS INVALID.

**Explanation:** INDEX\textit{n} was specified as (TYPE=PAGERANGE) or (TYPE=GROUPRANGE) and with a FIELD\textit{n} that was defined as (BASE=TRIGGER). This combination is not supported.

**System Action:** ACIF terminates.

**User Response:** Correct the ACIF parameters and resubmit the job.

**System Programmer Response:** No response is necessary.

USE OF FIELD\textit{n} BY INDEX\textit{n} IS INVALID. ONLY ONE FIELD IS ALLOWED IN AN INDEX DEFINED AS (TYPE=PAGERANGE) OR (TYPE=GROUPRANGE).

**Explanation:** More than one field was specified for INDEX\textit{n}, which is defined as either (TYPE=PAGERANGE) or (TYPE=GROUPRANGE). This is not valid.

**System Action:** ACIF terminates.

**User Response:** Correct the ACIF parameters and resubmit the job.

**System Programmer Response:** No response is necessary.

THE LENGTH, \textit{length1}, OF OFFSET PAIR \textit{pair} FOR FIELD\textit{n} DOES NOT EQUAL THE LENGTH, \textit{length2}, SPECIFIED FOR FIELD\textit{n}.

**Explanation:** The length of a begin-end pair, specified by the offset keyword of a field, does not match the length of the field. This in not valid; the lengths must be equal.

**System Action:** ACIF terminates.

**User Response:** Correct the ACIF parameters and resubmit the job.

**System Programmer Response:** No response is necessary.
APK448S  INDEXING WAS REQUESTED, BUT NEITHER 'TRIGGER1' NOR ANY 'FIELD' WAS SATISFIED WITHIN THE PAGE RANGE SPECIFIED BY THE INDEXSTARTBY PARAMETER.

Explanation: Indexing was requested, but the first INDEX satisfier was outside the range of pages specified in the INDEXSTARTBY parameter.

System Action: ACIF terminates.

User Response: Correct the parameters and resubmit the job.

System Programmer Response: No response is necessary.

APK449S  INDEX FIELDS REFERENCE OUTSIDE OF THE RECORD, FIELD# number INPUT RECORD# number

Explanation: The FIELDn value specified on the INDEXn parameter references an area that is outside the length of the requested record.

System Action: ACIF terminates.

User Response: Correct the parameters and resubmit the job.

System Programmer Response: No response is necessary.

APK450S  A REQUIRED ACIF PARAMETER parametername WAS NOT FOUND IN THE PARAMETER FILE.

Explanation: A required ACIF parameter was not found in the parameter file.

System Action: ACIF terminates.

User Response: Add the missing parameter to the parameter file and resubmit.

System Programmer Response: No response is necessary.

APK451S  FILE action ERROR DURING ddbname PROCESSING. SVC 99 ERROR error INFORMATION CODE code.

Explanation: An error occurred during the allocation, concatenation, or outadd of AFP resource libraries.

System Action: ACIF terminates.

User Response: Inform your system programmer that this error occurred.

System Programmer Response: Use the return code and reason code to determine the cause of the error and information code; then, determine the appropriate response. Refer to your operating system's authorized assembler language programs document for information about the SVC 99.

APK452S  A trigger NUMBER OF number IS INVALID FOR parameter.

Explanation: The trigger or record number specified in the FIELDn or INDEXn parameter is not valid.

System Action: ACIF terminates.

User Response: Triggers used in field definitions must be defined. Correct the parameter and rerun ACIF.

System Programmer Response: No response is necessary.

APK453S  THE fields LENGTH OF length IS GREATER THAN THE ALLOWED MAXIMUM OF maxlen.

Explanation: The combined length of all of the FIELDn values on an INDEXn parameter is too long.

System Action: ACIF terminates.

User Response: Check the FIELDn and INDEXn parameters to find where this happens. Correct the parameter and resubmit the job.

System Programmer Response: No response is necessary.
APK454S  A VALUE OF value IS INVALID FOR FIELDn.
Explanation: A FIELDn parameter value contains incorrect characters.
System Action: ACIF terminates.
User Response: Correct the parameter value and resubmit the job.
System Programmer Response: No response is necessary.

APK455S  FIELDn USED BY INDEXn WAS NOT DEFINED.
Explanation: An INDEXn parameter referred to a FIELDn that was not defined in the parameter file.
System Action: ACIF terminates.
User Response: Correct the parameters and resubmit the job.
System Programmer Response: No response is necessary.

APK456S  THE TRIGGER1 RELATIVE RECORD NUMBER IS NOT EQUAL TO ASTERISK.
Explanation: The record number associated with the TRIGGER1 parameter was not an asterisk.
System Action: ACIF terminates.
User Response: Correct the parameter and resubmit the job.
System Programmer Response: No response is necessary.

APK457S  TRIGGER1 WAS NOT DEFINED, BUT SECONDARY TRIGGERS ARE PRESENT.
Explanation: TRIGGER1 must be specified if secondary TRIGGERn parameters are present.
System Action: ACIF terminates.
User Response: If no indexing is required, delete all TRIGGERn parameters from the parameter file; otherwise, supply a TRIGGER1 parameter for this run of ACIF.
System Programmer Response: No response is necessary.

APK458S  A NON-LITERAL VALUE OF value HAS BEEN SUPPLIED FOR TRIGGERn.
Explanation: The supplied TRIGGERn value was not a literal.
System Action: ACIF terminates.
User Response: Correct the parameters and resubmit the job.
System Programmer Response: No response is necessary.

APK459S  INDEX NEEDED FOR THE GROUPNAME WAS NOT FOUND.
Explanation: The index used for the GROUPNAME contained a field that was based on a floating trigger; however, the trigger was not found. Therefore, there is no value for the GROUPNAME. INDEX1 is used for the GROUPNAME by default.
System Action: ACIF terminates.
User Response: Use the GROUPNAME parameter to specify an index that does not contain a field based on a floating trigger.
System Programmer Response: No response is necessary.

</tbody>
</table>
APK467S  THE NUMBER number IS NOT SUPPORTED FOR parameter.
Explanation: An incorrect number was specified on a FIELDn, INDEXn, or TRIGGERn parameter keyword.
System Action: ACIF continues processing the parameter file, but does not process the report file.
User Response: Correct the parameter keyword so that the number is within the allowed range for that parameter and rerun ACIF.

APK468S  THE INPUT BUFFER IS TOO SMALL FOR THE PARAMETER VALUE value.
Explanation: The named value was too long for the ACIF internal input buffer.
System Action: ACIF terminates.
User Response: Use your local problem reporting system to report the error.

APK469S  THE LENGTH OF THE VALUE value EXCEEDS THE MAXIMUM ALLOWED LENGTH FOR THE parameter PARAMETER.
Explanation: The length of the named value exceeds the maximum length.
System Action: ACIF continues processing the parameter file, but does not process the report file.
User Response: Correct the value so that its length is within the maximum for that parameter and rerun ACIF.

APK470S  WHICH BEGINS AT OFFSET offset FOR A LENGTH OF length.
Explanation: This message is issued following a message that contains the cause of the error.
System Action: ACIF continues processing the parameter file, but does not process the report file.
User Response: Correct the value so that its length is within the maximum for that parameter and rerun ACIF.

APK471S  THE NUMBER OF FIELD VALUES ON THE INDEX PARAMETER EXCEEDED THE MAXIMUM ALLOWED.
Explanation: There were too many FIELDn values specified for the INDEXn parameter printed above this message.
System Action: ACIF continues processing the parameter file, but does not process the report file.
User Response: Remove the extra FIELDn values from the INDEXn parameter and rerun ACIF.

APK472S  THE NUMBER OF VALUES SPECIFIED FOR THE parameter PARAMETER EXCEEDED THE MAXIMUM ALLOWED.
Explanation: Too many values were specified for the named parameter.
System Action: ACIF continues processing the parameter file, but does not process the report file.
User Response: Consult the ACIF manual for the maximum number of values for this parameter, correct the parameter, and rerun ACIF.

APK473S  RECORDRANGE SUB-PARAMETER ALLOWED ONLY IF RECORD VALUE IS "*".
Explanation: The RECORDRANGE sub-parameter is only valid on a TRIGGERn parameter if the record value was specified as "*".
System Action: ACIF terminates.
User Response: Either specify an "*" for the record value or remove the RECORDRANGE sub-parameter from the TRIGGER parameter.
APK474S • APK532S

APK474S  END-OF-FILE ENCOUNTERED BEFORE CLOSING QUOTE FOUND FOR value.
Explanation: The end of the parameter file was found before the closing quote for a literal value.
System Action: ACIF terminates.
User Response: Ensure the literal value is enclosed in quotes and rerun ACIF.

APK475S  THE HEX STRING hexstring IS NOT VALID.
Explanation: The value specified was not a valid hex string.
System Action: ACIF continues processing the parameter file, but does not process the report file.
User Response: Correct the hex string and rerun ACIF.

APK476I  MESSAGE TEXT NOT AVAILABLE FOR MESSAGE NUMBER: number
Explanation: ACIF attempted to write a message that is not defined in the message catalog.
System Action: ACIF processing continues depending upon the significance of undefined message.
User Response: Contact IBM service and inform them that ACIF attempted to write an undefined message. This situation should be corrected by IBM.

APK499S  INTERNAL ERROR in MODULE module AT FUNCTION function.
Explanation: An internal error has occurred.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message. Make note of the module and function specified in the message.

APK532S  A resource WITH A MEMBER NAME (membername) WAS NOT FOUND OR WAS INVALID - RETURN CODE returncode.
Explanation: The requested form definition, page definition, page segment, medium overlay, or setup file does not exist in any of the available paths.

222  IBM Content Manager OnDemand: Messages and Codes
### APK610I  GTF RETURN CODE = rc.

**Explanation:** Generalized Trace Facility (GTF) has returned a nonzero return code from the GTRACE request. The return code rc and error text explain the error. The return codes and error text are:

<table>
<thead>
<tr>
<th>RC</th>
<th>Error Text</th>
</tr>
</thead>
<tbody>
<tr>
<td>04</td>
<td>Inactive OS/390 GTF</td>
</tr>
<tr>
<td>08</td>
<td>Incorrect length = xxxx</td>
</tr>
<tr>
<td>0C</td>
<td>Incorrect data address = xxxx</td>
</tr>
<tr>
<td>10</td>
<td>Incorrect FID = xx</td>
</tr>
<tr>
<td>14</td>
<td>Incorrect EID = xx</td>
</tr>
<tr>
<td>18</td>
<td>No GTF buffer space</td>
</tr>
<tr>
<td>1C</td>
<td>Incorrect parameter address = xxxx</td>
</tr>
<tr>
<td>20</td>
<td>Data paged out</td>
</tr>
<tr>
<td>xx</td>
<td>Unknown GTF return code</td>
</tr>
</tbody>
</table>

**System Action:** The action depends on the return code; ACIF might or might not continue tracing. For return codes 18 and 20, GTF tracing continues. For the other return codes listed, GTF tracing stops. For unknown return codes, GTF tracing stops.

**User Response:** No response is necessary.

**System Programmer Response:** Refer to your operating system’s service aids logic documents for more information about the return codes.

### APK900S  MISSING DAT POINTER IN CCM.

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.

### APK901S  MISSING FORMDEF POINTER IN CCM.

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.

### APK902S  MISSING PAGEDEF POINTER IN CCM.

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.
**APK903S • APK909S**

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.

---

**APK903S  MISSING OBJECT STACK POINTER IN CCM.**

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.

---

**APK904S  MISSING CODE PAGE POINTER IN CCM.**

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.

---

**APK905S  MISSING FONT METRIC POINTER IN CCM.**

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.

---

**APK906S  UNEXPECTED OTHERWISE STATEMENT ENCOUNTERED.**

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.

---

**APK907S  CCM CANNOT FIND REQUESTED MEDIUM MAP.**

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.

---

**APK908S  CCM CANNOT FIND REQUESTED DATA MAP.**

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.

---

**APK909S  CCM CANNOT FIND REQUESTED MEG.**

**Explanation:** An internal error has occurred in ACIF.

**System Action:** ACIF terminates.

**User Response:** Contact IBM Service and inform them that you have received this message indicating an internal error.
APK910S  INPUT BIN LIST CHANGED DURING PROCESSING.
Explanation: An internal error has occurred in ACIF.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message indicating an internal error.

APK911S  DAT DID NOT SPECIFY ANY INPUT BIN INFORMATION.
Explanation: An internal error has occurred in ACIF.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message indicating an internal error.

APK912S  OVERLAY LOCAL ID HAS BEEN CHANGED IN LIST.
Explanation: An internal error has occurred in ACIF.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message indicating an internal error.

APK913S  STARTING COPY COUNT EXCEEDS TOTAL COPIES IN MM.
Explanation: An internal error has occurred in ACIF.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message indicating an internal error.

APK914S  CONDITIONAL PROCESSING INFORMATION PASSED TO CCM AT DOCUMENT INTERFACE BUT PAGEDEF DOES NOT REQUEST CONDITIONAL PROCESSING.
Explanation: An internal error has occurred in ACIF.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message indicating an internal error.

APK915S  ACIF REQUESTED CODE PAGE DEALLOCATION AS WELL AS CODE PAGE PROCESSING.
Explanation: An internal error has occurred in ACIF.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message indicating an internal error.

APK916S  ACIF REQUESTED ACTIVATION OF AN OUTLINE FONT CHARACTER SET, BUT DOES NOT SUPPORT OUTLINE FONTS.
Explanation: An internal error has occurred in ACIF.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message indicating an internal error.
APK917S  ACIF REQUESTED ACTIVATION OF A FONT RESOURCE, BUT THE GLOBAL NAME WAS NOT PROVIDED OR HAD AN INCORRECT LENGTH.

Explanation: An internal error has occurred in ACIF.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message indicating an internal error.

APK918S  NO FREQUENT FONT TABLE OR FGID LOOK ASIDE TABLE WAS PROVIDED TO modulename.

Explanation: An internal error has occurred in ACIF.
System Action: ACIF terminates.
User Response: Contact IBM Service and inform them that you have received this message indicating an internal error.

APK919S  THE CCM COMPONENT OF ACIF HAS USED UP ITS OBJECT STACK IN modulename.

Explanation: The CCM component of ACIF has run out of its object stack area. This could be a data stream error or a logic error. A begin structured field must have a matching end structured field following it in the data stream. If this requirement is not met, the CCM can run out of its object stack area.
System Action: ACIF terminates.
User Response: Check the data stream to make sure each begin structured field has a matching end structured field following it. If this is not true, correct the data stream and resubmit the job to ACIF. If the data stream meets the begin structured field requirement, this message indicates an internal logic error. Contact IBM Service and inform them that you have received this message indicating an internal error.

APK920S  ALL THE INPUT BINS ON YOUR PRINTER ARE EITHER DISABLED OR ARE INserter BINS. PSF NEEDS TO SUBSTITUTE A BIN BUT NO BINS ARE AVAILABLE TO SUBSTITUTE.

Explanation: This abend is issued by module APKMSGEX. All bins reported back from the printer are either disabled or are inserter bins. As a result, there are no bins available for printing and the current data set cannot be printed.
System Action: ACIF processing terminates abnormally.

APK921S  NO RECORD LENGTH WAS PASSED TO CCM WHEN PROCESSING AN OBJECT CONTAINER RESOURCE.

Explanation: This abend is issued by module APRMSGEX. No record length was passed to CCM when processing an object container resource. This is a logic error.
System Action: PSF attempts to recover from this abend by restarting. Message APS057I is issued if PSF successfully restarts.
System Programmer Response: This PSF abend reason code indicates a logic error. Contact your service representative in the IBM Support Center or use your electronic link with IBM service for assistance regarding this error code.

APK2000S  THE REGISTERED OBJECT TYPE ID (identifier) OF AN OBJECT CONTAINER RESOURCE, NAME resourcename OR OBJECT OID objectoid, IS NOT VALID OR IS NOT SUPPORTED BY PSF OR THE PRINTER.

Explanation: The registration ID specified for an object container is not supported by the printer. The registration ID is specified in the object classification triplet on an IOB, BOC, or BR structured field. A value of *** for the resource name or object OID means that is was not specified.
System Action: PSF terminates the page or overlay. PSF attempts to locate the end of the current page and resume processing on the next page. If the end of the current page cannot be located, PSF stops printing the data set. PSF issues additional messages that identify the processing environment when the error was found.
User Response: If you created the structured fields for the object container resource, ensure that the registration ID is correct. If the registration ID is correct, submit the print job to a printer that supports this object type. For more information about what object types are supported by your printer, refer to your printer documentation.

System Programmer Response: If an IBM licensed program was used to create the structured fields, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK2003S  DATA IN AN INPUT RECORD OR RESOURCE IS INVALID: STRUCTURED FIELD structuredfield CONTAINED AN EXTENDED RESOURCE LOCAL IDENTIFIER VALUE THAT WAS USED IN A PREVIOUS STRUCTURED FIELD OF THE SAME TYPE.

Explanation: More than one structured field used the same Extended Resource Local Identifier value for different resources of the same type. The Extended Resource Local Identifier is specified by using the Extended Resource Local Identifier (X’22’) triplet on the structured field. The structured field that attempted to use the same Extended Resource Local Identifier value is identified in the message.

System Action: PSF stops processing the current data set and issues messages identifying the position of the structured field and the processing environment when the error was found.

User Response: If you created the structured fields for the resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

Problem Determination: Items 1, 2, 3, 13, 15c, 17, 19.

APK2004S  DATA IN A FORMDEF RESOURCE IS INVALID: MEDIA TYPE LOCAL IDENTIFIER IN MMC STRUCTURED FIELD, ID identifier, WAS NOT FOUND IN THE MMT STRUCTURED FIELD.

Explanation: The Media Type local ID in the Medium Modification Control (MMC) structured field was not present in the Map Media Type (MMT) structured field. The MMC and MMT structured fields are in the form definition.

System Action: The form definition containing the error is not used, and one of the following occurs:
- If the error is in the default form definition, or a form definition specified for printing messages or separator pages, PSF is not started.
- If the error is in a form definition specified on the user’s OUTPUT JCL statement, PSF cannot begin printing the data set; it tries to print the next data set.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.
**APK2005S**  DATA IN AN INPUT RECORD OR PAGEDEF RESOURCE IS NOT VALID: RECORD IDENTIFIER `identifier` COULD NOT BE FOUND WITHIN THE RCD STRUCTURED FIELDS.

**Explanation:** The record identifier specified in an input record could not be matched to a Record Descriptor (RCD) structured field in the current data map. The RCD structured field is in the page definition.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to **Mixed Object Document Content Architecture Reference** and **Advanced Function Presentation: Programming Guide and Line Data Reference** for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages, use the information provided in the User Response section to correct the error.

**APK2006S**  DATA IN A PAGEDEF RESOURCE IS NOT VALID: GRAPHICS GENERATION WAS REQUESTED ON RCD STRUCTURED FIELD `structuredfield`, BUT THE PRINTER DOES NOT SUPPORT GRAPHICS OBJECTS.

**Explanation:** A Record Descriptor (RCD) structured field in a page definition has requested PSF to generate a graphics object from the line data, but the printer does not support graphics objects.

**System Action:** PSF ignores the request and continues processing the data set.

**User Response:** To print the data set and have PSF generate graphics objects, submit the print job to a printer that supports graphics objects. For more information about AFP printers that support graphics objects, refer to **AFP: Printer Information**

**System Programmer Response:** If the page definition is for a separator page, the message data set, or the default page definition for the user print data sets defined in the PSF startup procedure, delete the option from the page definition that requests that a graphics object be generated.

**APK2007S**  DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE FIELD RCD POINTER VALUE IN RCD STRUCTURED FIELD NUMBER `number` WILL CAUSE AN INFINITE LOOP.

**Explanation:** The FIELD RECORD DESCRIPTOR POINTER parameter in the Record Descriptor (RCD) structured field identified in this message caused an infinite-loop condition. The RCD structured field is contained in the page definition.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to **Mixed Object Document Content Architecture Reference** and **Advanced Function Presentation: Programming Guide and Line Data Reference** for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**APK2008I**  DATA IN A PAGEDEF RESOURCE IS NOT VALID: RCD OR XMD STRUCTURED FIELD NUMBER `number` SPECIFIES A VALUE THAT IS NOT VALID AS A POINTER TO A FIELD RCD OR XMD. THE VALUE `rcdvalue`. THIS EXCEEDS THE LNC STRUCTURED FIELD COUNT VALUE OF `lncvalue`.

**Explanation:** The Record Descriptor (RCD) or XML Descriptor (XMD) structured field identified in this message specifies a value as a pointer to a Field RCD or XMD. The value specified is not valid. The value is greater than the
COUNT value in the Line Descriptor Count (LNC) structured field in the current data map. The LNC, RCD, and XMD structured fields are in the page definition.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to [Mixed Object Document Content Architecture Reference](#) and [Advanced Function Presentation: Programming Guide and Line Data Reference](#) for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK2009S**  
DATA IN A PAGEDF RESOUCI IS NOT VALI: RIGHT ALIGNMENT WAS REQUESTED ON RCD STRUCTURED FIELD `structuredfield`, BUT THE PRINTER DOES NOT SUPPORT RIGHT ALIGNMENT.

**Explanation:** A Record Descriptor (RCD) structured field in a page definition has requested that PSF right align a field from the line data, but the printer does not support the controls necessary for PSF to perform this function.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** To print the data set and have PSF right align fields, submit the print job to a printer that supports all four inline print directions and all four character rotations. For more information about inline print directions and character rotations supported by AFP printers, refer to [AFP: Printer Information](#).

**System Programmer Response:** If the page definition is for a separator page, the message data set, or the default page definition for the user print data sets defined in the PSF startup procedure, delete the option from the page definition that requests that a field be right aligned.

---

**APK2010S**  
RECORD FORMATTING WAS REQUESTED BY THE PAGE DEFINITION BUT THAT FUNCTION IS NOT SUPPORTED BY THIS RELEASE OF PSF.

**Explanation:** The record formatting function is not supported by this release of PSF.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** To use the record formatting function, submit this job to a version of print PSF that supports record formatting.

**System Programmer Response:** If the page definition is for a separator page, the message data set, or the default page definition for the user print data sets defined in the PSF startup procedure, remove this page definition and select one that does not use the record formatting function.

---

**APK2011I**  
DATA IN A PAGEDF RESOURCE IS NOT VALID: DATA MAP `datamap1` AND DATA MAP `datamap2` ARE FOR PROCESSING DIFFERENT TYPES OF DATA. ALL DATA MAPS IN THE PAGE DEFINITION MUST SPECIFY THE SAME DATA FORMATTING.

**Explanation:** A page definition can only be used for one type of data. A single page definition cannot be used to mix the processing of traditional line data, record-format line data, and XML data.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to [Mixed Object Document Content Architecture Reference](#) and [Advanced Function Presentation: Programming Guide and Line Data Reference](#) for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.
**APK2012S • APK2014I**

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**Explanation:** For Record Descriptor (RCD) structured fields that are marked as either a field or a conditional processing RCD, the RECORD IDENTIFIER parameter value must be all zeros. The RCD structured fields are in the page definition.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**Explanation:** With the exception of the default Page Header Record Descriptor (RCD) structured field, the default Page Trailer RCD structured field, Field RCD structured fields, and Conditional Processing RCD structured fields, all other RCD structured fields in a data map must have a unique record identifier parameter value specified.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**Explanation:** The Body Record Descriptor (RCD) or XML Descriptor (XMD) structured field selected for placing the first body record of the page does not fit within the area of the page defined by the bottom margin. If Field RCD or XMD structured fields are being used, one of the Field RCD or XMD structured fields might be positioning data beyond the bottom margin. This error prevents PSF from being able to place the record and continuing.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the
error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK2015S**  DATA IN A PAGEDEF RESOURCE IS NOT VALID: AN RCD STRUCTURED FIELD SPECIFIED A GRAPHICS DESCRIPTOR TRIPLET TO END ALL STARTED GRAPHICS DESCRIPTOR TRIPLETS THAT HAVE A MATCHING GRAPHID PARAMETER VALUE **value**, BUT A MATCH COULD NOT BE FOUND.

**Explanation:** A graphics object can be started by one Record Descriptor (RCD) structured field and ended with another RCD structured field. When this is done, the Graphics Descriptor triplets that start and end a graphics object must have matching GRAPHID parameter values specified and the RCD structured fields must have matching orientations. PSF could not find a match between the start and end Graphics Descriptor triplets using the GRAPHID parameter from the end Graphics Descriptor triplet and the TEXT ORIENTATION parameter value from the RCD structured field.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK2016S**  DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE USE RECORD IDENTIFIER FLAG WAS SET BUT THE SUM OF THE DATA START POSITION AND THE DATA LENGTH PARAMETER VALUES IN RCD STRUCTURED FIELD NUMBER **number** SELECTS DATA BEYOND THE RECORD IDENTIFIER FIELD.

**Explanation:** For Record Descriptor (RCD) structured fields that are marked to use only the record identifier portion of an input record, only the record identifier can be accessed by the RCD. The DATA START parameter plus the DATA LENGTH parameter of this RCD accesses data beyond the 10-byte record identifier area of the input record.

**System Action:** PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* and *Advanced Function Presentation: Programming Guide and Line Data Reference* for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

---

**APK2017S**  DATA IN A PAGEDEF RESOURCE IS NOT VALID: A FONT IS NEEDED FOR AN RCD IN DATA MAP **datamap** BUT NO FONTS WERE MAPPED IN THE DATA MAP.

**Explanation:** Fonts needed for printing record-format line data must be selected in the data map. The CHARS JCL parameter cannot be used to select fonts. The data map identified in this message contained a Record Descriptor (RCD) structured field that requires a font, but no fonts were specified in the data map.
APK2018S • APK2020I

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK2018S  DATA IN A PAGEDEF RESOURCE IS NOT VALID: RCD STRUCTURED FIELD requested that the page number be reset, but the page number parameter contains zero.

Explanation: The PAGE NUMBER parameter in a Record Descriptor (RCD) structured field cannot be zero when the RCD requests that PSF reset the page number.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK2019S  DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE FONT SELECTED FOR PRINTING THE PAGE NUMBER ON RCD OR XMD STRUCTURED FIELD NUMBER cannot be a double-byte font when using the ASCII encoding scheme.

Explanation: PSF cannot determine the correct code points to generate when a double-byte font is used to print the page number using the ASCII encoding scheme. The structured field identified in this message selected a double-byte ASCII font for printing the page number. This is not allowed.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

APK2020I  DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: THE OBJECT OID LENGTH SPECIFIED IN A FULLY QUALIFIED NAME TRIPLER ON A structuredfield STRUCTURED FIELD IS GREATER THAN 129 BYTES.

Explanation: An object OID being specified in a Fully Qualified Name triplet has a length that exceeds 129 bytes.

System Action: PSF stops processing the current page. PSF attempts to find the end of the current page and to resume printing on the next page. If unable to find the end of the page, PSF stops printing the data set. If this error
occurs in a resource, PSF stops processing the data set. If this error occurs in a resource environment group, PSF stops processing the resource environment group and continues processing the data set.

**User Response:** If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the correct format of the referenced structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**Operator Response:** If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

**Problem Determination:** Items 1, 2, 3, 13, 15c, 17, 19.

---

**APK2022I** DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: A RESOURCE NAMED AS A SECONDARY RESOURCE ON AN IOB STRUCTURED FIELD IS NOT NAMED IN THE ACTIVE ENVIRONMENT GROUP OF THE PAGE OR OVERLAY.

**Explanation:** An Include Object (IOB) structured field calls for a secondary resource. This resource must be named in an MDR in the active environment group of the page or overlay containing the IOB structured field.

**System Action:** If the object is in a page, PSF terminates the page and continues processing the data set. If the object is in a resource, PSF stops processing and printing the data set.

**User Response:** If you created the structured fields for the print data set or the resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the print data set or the resource, contact your system programmer.

**System Programmer Response:** If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error. If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid.

---

**APK2021I** DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: THE STRUCTURED FIELD STRUCTURED FIELD CONTAINS UNPAIRED FQN X'BE' & FQN X'DE' TRIPLETS.

**Explanation:** If this is an Include Object (IOB) structured field, the Fully Qualified Name (FQN) triplet with an FQNType of Data Object Internal Resource Reference (X'BE') must immediately follow an FQN triplet with an FQNType of Data Object External Resource Reference (X'DE'). If this is a Map Data Resource (MDR) structured field, a repeating group with an FQN triplet type X'BE' must also include an FQN triplet type X'DE'.

**System Action:** PSF stops processing the current page. PSF attempts to find the end of the current page and to resume printing on the next page. If unable to find the end of the page, PSF stops printing the data set. If this error occurs in a resource, PSF stops processing the data set.

**User Response:** If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the form definition with the error, verify that the input to that program was valid. If the input was valid, refer to your system's diagnosis reference for assistance in determining the source of the problem.

**Operator Response:** If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

**Problem Determination:** Items 1, 2, 13, 15c, 17, 19.
If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem.

Operator Response: If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page or for the message data set in the PSF startup procedure. Contact your system programmer.

Problem Determination: Items 2, 17.

**APK2023I** DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: THE FORMAT SPECIFIED IN A FULLY QUALIFIED NAME TRIPLET ON A *structured field* STRUCTURED FIELD IS NOT VALID.

Explanation: The FQNFmt specified in a Fully Qualified Name (FQN) triplet on a structured field is not valid.

System Action: PSF stops processing the current page. PSF attempts to find the end of the current page and to resume printing on the next page. If unable to find the end of the page, PSF stops printing the data set. If this error occurs in a resource, PSF stops processing the data set. If this error occurs in a resource environment group, PSF stops processing the resource environment group and continues processing the data set.

User Response: If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the correct format of the referenced structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

Problem Determination: Items 1, 2, 3, 13, 15c, 17, 19.

**APK2024I** DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: A FULLY QUALIFIED NAME TRIPLET WITH A TYPE OF X’84’ OR X’CE’ WAS SPECIFIED ON AN MDR STRUCTURED FIELD IN AN OBJECT ENVIRONMENT GROUP.

Explanation: A Fully Qualified Name (FQN) triplet with an FQNTType of Begin Resource Object Reference (X’84’) or Other object Data Reference (X’CE’) is not allowed on a Map Data Resource structured field in an Object Environment Group.

System Action: PSF stops processing the current page. PSF attempts to find the end of the current page and to resume printing on the next page. If unable to find the end of the page, PSF stops printing the data set. If this error occurs in a resource, PSF stops processing the data set.

User Response: If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the correct format of the referenced structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

Problem Determination: Items 1, 2, 3, 13, 15c, 17, 19.
APK2025I DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: MORE THAN ONE FULLY QUALIFIED NAME TRIPLET WAS SPECIFIED IN A REPEATING GROUP ON AN MDR STRUCTURED FIELD.

Explanation: Only one Fully Qualified Name (FQN) triplet with an FQNTyppe of Begin Resource Object Reference (X'84'), Other Object Data Reference (X'CE'), or Data Object External Resource Reference (X'DE') can be specified in a repeating group.

System Action: PSF stops processing the current page. PSF attempts to find the end of the current page and to resume printing on the next page. If unable to find the end of the page, PSF stops printing the data set. If this error occurs in a resource, PSF stops processing the data set. If this error occurs in a resource environment group, PSF stops processing the resource environment group and continues processing the data set.

User Response: If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the correct format of the referenced structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

Problem Determination: Items 1, 2, 3, 13, 15c, 17, 19.

APK2026I DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: THE OBJECT CLASS SPECIFIED IN AN OBJECT CLASSIFICATION TRIPLET ON AN MDR STRUCTURED FIELD IS NOT VALID.

Explanation: The ObjClass specified in an Object Classification triplet on a Map Data Resource (MDR) structured field must be X'40' if the Fully Qualified Name triplet type in the repeating group is a Data Object External Resource Reference (X'DE'). The ObjClass specified must be X'01' if the Fully Qualified Name triplet type in the repeating group is an Other Object Data Reference (X'CE').

System Action: PSF stops processing the current page. PSF attempts to find the end of the current page and to resume printing on the next page. If unable to find the end of the page, PSF stops printing the data set. If this error occurs in a resource, PSF stops processing the data set. If this error occurs in a resource environment group, PSF stops processing the resource environment group and continues processing the data set.

User Response: If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the correct format of the referenced structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

Problem Determination: Items 1, 2, 3, 13, 15c, 17, 19.
**APK2027I** DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: AN MDR STRUCTURED FIELD SPECIFIES THE SAME RESOURCE REFERENCE MORE THAN ONCE IN AN ENVIRONMENT GROUP.

**Explanation:** The same resource reference cannot be made in a Map Data Resource (MDR) structured field in an environment group.

**System Action:** PSF stops processing the current page. PSF attempts to find the end of the current page and to resume printing on the next page. If unable to find the end of the page, PSF stops printing the data set. If this error occurs in a resource, PSF stops processing the data set. If this error occurs in a resource environment group, PSF stops processing the resource environment group and continues processing the data set.

**User Response:** If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the correct format of the referenced structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**Operator Response:** If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

**Problem Determination:** Items 1, 2, 3, 13, 15c, 17, 19.

---

**APK2028I** DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: THE RESOURCE BEGINNING WITH THE *structuredfield* STRUCTURED FIELD CANNOT BE SENT TO THE PRINTER AS A HARD RESOURCE.

**Explanation:** Either the printer or your PSF does not support sending this resource to the printer before the page and treating it as a hard resource managed by PSF.

**System Action:** PSF ignores this resource in the MDR and continues processing. PSF treats it as a soft resource each time it is included in a page or resource. A soft resource is sent to the printer each time it is included.

**User Response:** None.

**System Programmer Response:** None.

**Operator Response:** If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

---

**APK2029I** DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: OBJECT OID objectid1 DOES NOT MATCH THE OBJECT OID objectid2 SPECIFIED ON THE *structuredfield* STRUCTURED FIELD.

**Explanation:** The object OID specified on a structured field must match the object OID specified on the Map Data Resource (MDR) or Include Object (IOB) structured field that referenced it. A value of *** indicates an OID was not specified.

**System Action:** PSF stops processing the current page. PSF attempts to find the end of the current page and to resume printing on the next page. If unable to find the end of the page, PSF stops printing the data set. If this error occurs in a resource, PSF stops processing the data set.

**User Response:** If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to *Mixed Object Document Content Architecture Reference* for more information about the correct format of the referenced structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to...
your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**Operator Response:** If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

**Problem Determination:** Items 1, 2, 3, 13, 15c, 17, 19.

---

**APK2030I** DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: A SECONDARY RESOURCE IS SPECIFIED ON AN IOB STRUCTURED FIELD THAT INCLUDES A BAR CODE OR GRAPHICS OBJECT.

**Explanation:** A Fully Qualified Name (FQN) triplet of type Data Object External Resource Reference (X’DE’) is specified on an Include Object (IOB) structured field that is including a bar code or graphics object. Secondary resources are not allowed for these objects.

**System Action:** The secondary resource reference is ignored and processing continues.

**User Response:** If you created the structured fields for the print data set or resource, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference for more information about the correct format of the referenced structured field. If the structured field is correct, the error might be a PSF logic error. If you used a program to create the structured fields for the print data set or resource, contact your system programmer.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields for the print data set or the resource with the error, verify that the input to that program was valid. If the input was valid, refer to your system’s diagnosis reference for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**Operator Response:** If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

**Problem Determination:** Items 1, 2, 3, 13, 15c, 17, 19.

---

**APK2032I** DATA IN PAGedef RESOURCE pagedef IS NOT VALID: THE RESOURCE BEGINNING WITH THE structuredfield STRUCTURED FIELD CANNOT BE SENT TO THE PRINTER AS A HARD RESOURCE.

**Explanation:** Either the printer or your PSF does not support sending this resource to the printer before the page and treating it as a hard resource managed by PSF.

**System Action:** PSF ignores this resource in the MDR and continues processing. PSF treats it as a soft resource each time it is included in a page or resource. A soft resource is sent to the printer each time it is included.

**User Response:** None.

**System Programmer Response:** None.

**Operator Response:** If you see this message on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Contact your system programmer.

---

**APK2033I** THE BAR CODE DATA OR BAR CODE DATA PLUS THE ADDITIONAL 2D BAR CODE PARAMETERS EXCEED THE OUTPUT COMMAND BUFFER.

**Explanation:** Either the bar code data itself or the bar code data plus the macro control block data specified for a 2D bar code exceeds the size of the output command buffer. The macro control block data is specified in your page definition as part of the BCXPARMS (additional bar code parameters).

**System Action:** PSF issues this message and continues processing.

**User Response:** Change the amount of data specified for your bar code or reduce the amount of data in the macro control block.
APK2039I  DATA IN AN INPUT RECORD OR RESOURCE IS NOT VALID: A DUPLICATE FINISHING OPERATION WAS FOUND IN THE MAPNAME MEDIUM MAP.

Explanation: The same finishing operation was specified more than once in a medium map. This nesting of the same finishing operation is not allowed. The Media Finishing Control (MFC) structured field is in a form definition or an internal medium map in the print data set.

System Action: If the error is in a resource, the resource is not used, and one of the following occurs:
- If the error is in the default form definition, or a form definition specified for printing messages or separator pages, PSF is not started.
- If the error is in a form definition specified on the user’s OUTPUT JCL statement, PSF cannot begin printing the data set and tries to print the next data set.
- If the error is in the print data set, PSF stops processing the data set.

PSF issues a message identifying the position of the structured field in the input data stream or resource. PSF issues additional messages identifying the processing environment in which the error occurred.

User Response: If you created the structured fields for the form definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the form definition, contact your system programmer.

System Programmer Response: If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.

APK2040I  THE NUMBER OF MEDIA COLLECTION FINISHING NESTING LEVELS IS MORE THAN 4.

Explanation: A maximum of four levels of nesting is allowed for media collection finishing. The Medium Finishing Control (MFC) structured field can be contained in a form definition or internal medium map in a page.

System Action: PSF stops processing the data set.

User Response: If you created the form definition or internal medium map, you must remove one or more levels of media collection finishing operations. Refer to Mixed Object Document Content Architecture Reference for more information about the structured field. Resubmit the print request. If the total number of nesting levels is less than or equal to four, the error might be a PSF logic error.

System Programmer Response: If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page or the message data set in the PSF startup procedure. Inform your system programmer.

APK2041I  DATA IN AN INPUT RECORD OR PAGEDEF RESOURCE IS NOT VALID: INPUT DATA BEING USED FOR A VARIABLE RESOURCE NAME IN LND OR RCD STRUCTURED FIELD NUMBER IS DOUBLE BYTE DATA.

Explanation: A Resource Object Include triplet or an Extended Resource Local ID triplet on a Line Descriptor (LND) or Record Descriptor (RCD) structured field requests that the input data for the resource name is included. This input data cannot be double-byte data.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request.
request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.

APK2042I  DATA IN A PAGEDEF RESOURCE IS NOT VALID: AN XML PAGE DEFINITION REQUESTED THAT THE INPUT DATA BE USED FOR A RESOURCE NAME ON XMD STRUCTURED FIELD NUMBER number.

Explanation: An Object Reference Qualifier (ORQ) triplet has been specified on an XML Descriptor (XMD) structured field.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: If you created the structured fields for the resource, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference and Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field has no error, the error might be a PSF logic error. If you used a program to create the structured fields for the resource, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the resource with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page or for the message data set in the PSF startup procedure. Inform your system programmer.

APK2043I  DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE ATTRIBUTE XMD POINTER VALUE IN XMD STRUCTURED FIELD NUMBER number WILL CAUSE AN INFINITE LOOP.

Explanation: The Attribute XML Descriptor Pointer value in the XML Descriptor (XMD) structured field identified in this message caused an infinite loop condition. The XMD structured field is contained in the page definition.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Mixed Object Document Content Architecture Reference and Advanced Function Presentation: Programming Guide and Line Data Reference for more information about the structured field. If the structured field does not have an error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem.

Operator Response: If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.
APK2044I DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE FIELD XMD POINTER VALUE IN XMD STRUCTURED FIELD NUMBER number WILL CAUSE AN INFINITE LOOP.

Explanation: The Field XML Descriptor Pointer value in the XML Descriptor (XMD) structured field identified in this message caused an infinite loop condition. The XMD structured field is contained in the page definition.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference and Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field does not have an error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem.

Operator Response: If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.

APK2045I THE ENCODING SCHEME SPECIFIED IN A PAGE DEFINITION USED TO PROCESS XML DATA IS NOT SUPPORTED BY PSF.

Explanation: The encoding scheme specified is not supported by PSF.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: You need to use an encoding scheme that is supported by PSF for XML data processing. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference and Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field does not have an error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.

APK2046I XML DATA FORMATTING WAS REQUESTED BY THE PAGE DEFINITION BUT THAT FUNCTION IS NOT SUPPORTED BY THIS RELEASE OF PSF.

Explanation: The XML data formatting function is not supported by this release of PSF.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: To use the XML data formatting function, submit this job to a version of PSF that supports XML data formatting.

System Programmer Response: If the page definition is for a separator page, the message data set, or the default page definition for the user print data sets defined in the PSF startup procedure, remove this page definition and select one that does not use the XML data formatting function.

Operator Response: If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.
APK2047I  DATA IN A PAGEDEF RESOURCE IS NOT VALID: DATA MAP datamapname1 AND DATA MAP datamapname2 HAVE DIFFERENT ENCODING SCHEMES SPECIFIED FOR THE USER DATA. ALL DATA MAPS IN THE PAGE DEFINITION MUST SPECIFY THE SAME ENCODING SCHEME.

Explanation: All the data maps in a page definition used to process XML data must use the same encoding scheme for the user data.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference and Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field does not have an error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.

APK2048I  DATA IN AN INPUT RECORD IS NOT VALID: A DTD DECLARATION AT CHARACTER COUNT NUMBER number IS SPECIFIED OUTSIDE OF A DTD.

Explanation: A document type definition (DTD) declaration is only allowed inside a DTD. The character count number specified in this message is relative to the start of the record.

System Action: PSF stops processing the current data set and issues a message identifying the position of the error in the data stream. PSF issues additional messages that identify the processing environment when the error was found.

User Response: If you created the XML data, correct the error and resubmit the print request. Refer to the XML specification Extensible Markup Language (XML) 1.0, on the World Wide Web Consortium Web site. If the XML data does not have an error, the error might be a PSF logic error. If you used a program to create the XML data, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the XML data with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that PSF cannot be initialized or cannot print error messages. Inform your system programmer.

APK2049I  DATA IN AN INPUT RECORD IS NOT VALID: THE XML COMMENT SYNTAX AT CHARACTER COUNT NUMBER number IS NOT VALID.

Explanation: After an XML comment has been started, you can only use two dashes in a row when ending a comment. The character count number specified in the message is relative to the start of the record.

System Action: PSF stops processing the current data set and issues a message identifying the position of the error in the data stream. PSF issues additional messages that identify the processing environment when the error was found.

User Response: If you created the XML data, correct the error and resubmit the print request. Refer to the XML specification Extensible Markup Language (XML) 1.0, on the World Wide Web Consortium Web site. If the XML data does not have an error, the error might be a PSF logic error. If you used a program to create the XML data, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the XML data with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance
in determining the source of the problem. If the error involves separator pages, use the information provided in the User Response section to correct the error.

**Operator Response:** If this message displays on the operator’s console, it indicates that PSF cannot be initialized or cannot print error messages. Inform your system programmer.

System Programmer Response: If an IBM licensed program was used to create the XML data with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that PSF cannot be initialized or cannot print error messages. Inform your system programmer.

APK2053I DATA IN AN INPUT RECORD IS NOT VALID: THE ENTITY AT CHARACTER COUNT NUMBER number IS NOT DEFINED IN THE DOCUMENT TYPE DEFINITION.

Explanation: PSF only allows internal general entity references, which must be defined in an internal document type definition (DTD). The character count number specified in this message is relative to the start of the record.

System Action: PSF stops processing the current data set and issues a message identifying the position of the error in the data stream. PSF issues additional messages that identify the processing environment when the error was found.

User Response: If you created the XML data, correct the error and resubmit the print request. Refer to the XML specification Extensible Markup Language (XML) 1.0, on the World Wide Web Consortium Web site. If the XML data does not have an error, the error might be a PSF logic error. If you used a program to create the XML data, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the XML data with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that PSF cannot be initialized or cannot print error messages. Inform your system programmer.

APK2054I DATA IN AN INPUT RECORD IS NOT VALID: THE CHARACTER IN A TAG NAME AT CHARACTER COUNT NUMBER number IS NOT VALID.

Explanation: A character in an XML tag name is not valid. The character count number specified in this message is relative to the start of the record.

System Action: PSF stops processing the current data set and issues a message identifying the position of the error in the data stream. PSF issues additional messages that identify the processing environment when the error was found.

User Response: If you created the XML data, correct the error and resubmit the print request. Refer to the XML specification Extensible Markup Language (XML) 1.0, on the World Wide Web Consortium Web site. If the XML data does not have an error, the error might be a PSF logic error. If you used a program to create the XML data, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the XML data with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator’s console, it indicates that PSF cannot be initialized or cannot print error messages. Inform your system programmer.

APK2055I DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE ENCODING SCHEME IDENTIFIER FOR THE USER DATA IS NOT SPECIFIED IN THE ENCODING SCHEME TRIPLET ON THE BDM STRUCTURED FIELD.

Explanation: The Encoding Scheme Identifier for User Data (ESIdUD) is missing on the Encoding Scheme triplet (X’50’) on a Begin Data Map (BDM) structured field. This information is required when processing an XML page definition.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: You need to provide the encoding scheme for the user data. Refer to Advanced Function Presentation:
APK2056I • APK2057I

Programming Guide and Line Data Reference and Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field does not have an error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator's console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.

**APK2056I** DATA IN A PAGEDEF RESOURCE IS NOT VALID: THE SAME QUALIFIED TAG WAS SPECIFIED IN XMD STRUCTURED FIELD NUMBERS number1 AND number2. ALL QUALIFIED TAGS MUST BE UNIQUE IN THE SAME DATA MAP.

Explanation: All XML Descriptor (XMD) structured fields in a data map must have a unique qualified tag specified; with the exception of these types of XMD structured fields:

- Default Page Header
- Default Page Trailer
- Field
- Conditional Processing
- Attribute

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: If you created the structured fields for the page definition, correct the error and resubmit the print request. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference and Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field does not have an error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

Operator Response: If this message displays on the operator's console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.

**APK2057I** DATA IN A PAGEDEF RESOURCE IS NOT VALID: RELATIVE INLINE POSITIONING ON AN XMD STRUCTURED FIELD CAN ONLY BE USED TO PLACE TEXT DATA.

Explanation: A Resource Object Include, Extended Resource Local ID, Bar Code Symbol Descriptor, or Graphics Descriptor triplet is specified on an XML Descriptor (XMD) structured field that uses relative inline positioning. You must use absolute inline positioning when including a page segment, overlay, or object with an XMD structured field. You must also use absolute inline positioning when generating a bar code or graphics object with an XMD structured field.

System Action: PSF stops processing the current data set and issues additional messages that identify the processing environment when the error was found.

User Response: You need to change your inline positioning to an absolute value. Refer to Advanced Function Presentation: Programming Guide and Line Data Reference and Mixed Object Document Content Architecture Reference for more information about the structured field. If the structured field does not have an error, the error might be a PSF logic error. If you used a program to create the structured fields for the page definition, contact your system programmer.

System Programmer Response: If an IBM licensed program was used to create the structured fields for the page definition with the error, verify that the input to that program is valid. If the input is valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages or
the message data set, use the information provided in the User Response section to correct the error.

**Operator Response:** If this message displays on the operator’s console, it indicates that the resource containing the error is defined for a separator page, for the message data set, or as the default resource for user print data sets in the PSF startup procedure. Inform your system programmer.

**APK3506I**  DATA OBJECT RESOURCE TYPE objectid COULD NOT BE FOUND IN THE RESOURCE LIBRARY.

**Explanation:** The registration ID (object-type OID) for the specified data object resource cannot be read from the resource library. Only objects with valid data object resource names or resource locator names are supported by ACIF. The registration ID is specified in the object classification triplet on an IOB, BOC, BR, or MDR structured field. If the objectid specified in this message is ***, ACIF either does not support the registration ID or does not have enough information to identify the objectid.

**System Action:** If this error is encountered when processing a Resource Environment Group (REG), PSF skips over this particular data object resource and tries to process any other resources specified in the REG. If this error is encountered while processing a page or overlay object, PSF terminates the page or overlay object. PSF attempts to locate the end of the current page and resume processing on the next page. If the end of the current page cannot be located, PSF stops printing the data set. PSF issues additional messages that identify the processing environment when the error was found.

**User Response:** If you created the structured fields for the data object resource, ensure that the registration ID is correct. If the registration ID is correct, submit the print job to a printer that supports this object type. For more information about what object types are supported by your printer, refer to your printer documentation.

**System Programmer Response:** If an IBM licensed program was used to create the structured fields, verify that the input to that program was valid and the correct printer is being used. If the input was valid, refer to PSF for OS/390 and z/OS: Diagnosis for assistance in determining the source of the problem. If the error involves separator pages or the message data set, use the information provided in the User Response section to correct the error.

**APK3507I**  DATA OBJECT RESOURCE TYPE objectid COULD NOT BE FOUND IN THE RESOURCE LIBRARY. THIS OBJECT IS NOT REQUIRED FOR PRINTING AND IS SKIPPED.

**Explanation:** The data object resource type specified could not be activated by the printer. The printer does not know about this data object resource; however, this object is not required for printing this document. PSF records this condition and continues. It is likely that the print file was formatted for a color printer that supports color profiles but is being printed on a printer that does not support these color profile objects. It is also possible that the objectid was specified incorrectly. If the objectid specified in this message is ***, ACIF does not have enough information to identify it.

**System Action:** PSF records this condition and then continues processing.

**User Response:** If the printed output is not acceptable, choose a printer that knows the object OIDs that are specified in this print file, correct the object OID, or reformat this print file for the printer on which this print file is being printed.

**System Programmer Response:** Verify that the formatting options at the time the print file is produced are compatible with the printer on which this print file is printing. Correct any mismatches.
